

## Clinical trial results:

**A randomized, open-label, two-arm phase II trial comparing the efficacy of sequential Ipilimumab versus best supportive care following first-line chemotherapy in subjects with unresectable locally advanced/metastatic gastric or gastro-esophageal junction cancer**

### Summary

EudraCT number	2011-000853-22
Trial protocol	ES DE IT
Global end of trial date	02 April 2015

### Results information

Result version number	v1 (current)
This version publication date	22 May 2016
First version publication date	22 May 2016

### Trial information

#### Trial identification

Sponsor protocol code	CA184-162
-----------------------	-----------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01585987
WHO universal trial number (UTN)	-

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

Analysis stage	Final
Date of interim/final analysis	02 April 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	02 April 2015
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

Main objective of the trial:

The purpose of the study is to compare the efficacy of Ipilimumab and standard of care as sequential or maintenance treatment immediately after first-line chemotherapy in the treatment of unresectable or metastatic gastric and gastro-esophageal cancer.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 July 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

---

**Population of trial subjects****Subjects enrolled per country**

Country: Number of subjects enrolled	France: 9
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	Hong Kong: 1
Country: Number of subjects enrolled	Italy: 27
Country: Number of subjects enrolled	Japan: 12
Country: Number of subjects enrolled	Korea, Republic of: 53
Country: Number of subjects enrolled	Poland: 2
Country: Number of subjects enrolled	Russian Federation: 3
Country: Number of subjects enrolled	Singapore: 3
Country: Number of subjects enrolled	Spain: 12
Country: Number of subjects enrolled	Taiwan: 3
Country: Number of subjects enrolled	United States: 16
Worldwide total number of subjects	143
EEA total number of subjects	52

Notes:

**Subjects enrolled per age group**

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	79
From 65 to 84 years	63
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted at 31 centres in 12 countries.

### Pre-assignment

Screening details:

A total of 143 subjects were enrolled in the study, out of which 114 were randomized. 29 subjects were not randomised due to: 26 no longer met study criteria; 2 withdrew consent, 1 other reason.

### Period 1

Period 1 title	Randomised
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Ipilimumab

Arm description:

Ipilimumab 10 milligram per kilogram body weight (mg/kg) solution intravenously (IV), over 90 minutes, once every 3 weeks for 4 doses, then 10 mg/kg every 12 weeks until disease progression (for a maximum treatment period of 3 years from the first dose). The option of re-introduction, defined as an additional 4 doses of ipilimumab (a dose of 10 mg/kg every 3 weeks) was allowed only at discretion of the investigator if criteria for re-induction were met.

Arm type	Experimental
Investigational medicinal product name	Ipilimumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Ipilimumab 10 mg/kg of body weight was administered intravenously, over 90 minutes, once every 3 weeks for 4 doses, then 10 mg/kg every 12 weeks until disease progression.

<b>Arm title</b>	All Best Supportive care (BSC)
------------------	--------------------------------

Arm description:

All BSC includes both active and non-active BSC. Active BSC includes the continuation of the fluoropyrimidine that was used during the lead-in chemotherapy (prior to randomisation to this study), but no other active systemic anti-cancer treatment. In non-active BSC, the fluoropyrimidine used during lead-in chemotherapy was not continued on study and no other chemotherapy or active treatment was used

Arm type	Active comparator
Investigational medicinal product name	Capecitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Continuation of Capecitabine dose used during the lead-in chemotherapy, administered orally as per standard of care until disease progression or toxicity.

Investigational medicinal product name	5-Fluorouracil (5-FU)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection

Routes of administration	Intravenous use
Dosage and administration details:	
Continuation of 5-FU dose used during the lead-in chemotherapy, administered intravenously as per standard of care until disease progression or toxicity.	
Investigational medicinal product name	Tegafur/Gimeracil/Oteracil potassium or S-1
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Continuation of S-1 dose used during the lead-in chemotherapy, administered orally as per standard of care until disease progression or toxicity.

<b>Number of subjects in period 1<sup>[1]</sup></b>	<b>Ipilimumab</b>	<b>All Best Supportive care (BSC)</b>
Started	57	57
Completed	57	51
Not completed	0	6
Consent withdrawn by subject	-	4
No longer met criteria	-	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Out of 143 subjects who were enrolled in the study, 114 were randomised. 29 subjects were not randomised due to: 26 no longer met study criteria; 2 withdrew consent, 1 other reason.

## Period 2

Period 2 title	Treated
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Ipilimumab

Arm description:

Ipilimumab 10 milligram per kilogram body weight (mg/kg) solution intravenously (IV), over 90 minutes, once every 3 weeks for 4 doses, then 10 mg/kg every 12 weeks until disease progression (for a maximum treatment period of 3 years from the first dose). The option of re-introduction, defined as an additional 4 doses of ipilimumab (a dose of 10 mg/kg every 3 weeks) was allowed only at discretion of the investigator if criteria for re-induction were met.

Arm type	Experimental
Investigational medicinal product name	Ipilimumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Ipilimumab 10 mg/kg of body weight was administered intravenously, over 90 minutes, once every 3 weeks for 4 doses, then 10 mg/kg every 12 weeks until disease progression.

<b>Arm title</b>	All Best Supportive care (BSC)
Arm description:	
All BSC includes both active and non-active BSC. Active BSC includes the continuation of the fluoropyrimidine that was used during the lead-in chemotherapy (prior to randomisation to this study), but no other active systemic anti-cancer treatment. In non-active BSC, the fluoropyrimidine used during lead-in chemotherapy was not continued on study and no other chemotherapy or active treatment was used.	
Arm type	Active comparator

-----------------------	--------------------------------

Reporting group description:

All BSC includes both active and non-active BSC. Active BSC includes the continuation of the fluoropyrimidine that was used during the lead-in chemotherapy (prior to randomisation to this study), but no other active systemic anti-cancer treatment. In non-active BSC, the fluoropyrimidine used during lead-in chemotherapy was not continued on study and no other chemotherapy or active treatment was used.

### Primary: Immune-related Progression Free Survival (irPFS) as Per Assessment of a Blinded Independent Review Committee (IRC) According to Immune Related Response Criteria (irRC) Guidelines

End point title	Immune-related Progression Free Survival (irPFS) as Per Assessment of a Blinded Independent Review Committee (IRC) According to Immune Related Response Criteria (irRC) Guidelines
-----------------	--

End point description:

irPFS is defined as the time between the randomisation date and the time of disease progression per irRC or death, whichever occurs first. irRC criteria=Measurable new lesions: incorporated into the tumor burden (eg, added to the index lesions); do not define progression unless the total measurable tumor burden increases by the required amount (25%). New non-measurable lesions: not considered progression if the total measurable tumor burden is stable or shrinking. irPFS was measured in months. The analysis was performed in all the subjects who were randomised.

End point type	Primary
----------------	---------

End point timeframe:

Randomisation up to 91 irPFS events (Approximately 19 months )

End point values	Ipilimumab	All Best Supportive care (BSC)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	57	57		
Units: Months				
median (confidence interval 95%)	2.924 (1.61 to 5.158)	4.895 (3.45 to 6.538)		

## Statistical analyses

<b>Statistical analysis title</b>	irPFS as per assessment of blinded IRC
Comparison groups	All Best Supportive care (BSC) v Ipilimumab
Number of subjects included in analysis	114
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.0972 <sup>[1]</sup>
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	1.439
Confidence interval	
level	Other: 80 %
sides	2-sided
lower limit	1.085
upper limit	1.908

Notes:

[1] - Significance level used: 0.2

## Secondary: Progression Free Survival (PFS) Per Modified World Health Organization (mWHO) Criteria

End point title	Progression Free Survival (PFS) Per Modified World Health Organization (mWHO) Criteria
-----------------	--

End point description:

PFS per mWHO was defined as the time between the randomisation date and the time of disease progression per mWHO criteria or death, whichever occurred first and was measured in months. mWHO criteria: New lesions always mean progression; Changes in non-measurable lesions contribute in the definitions of Complete Response (CR), Partial Response (PR), Stable Disease (SD) and Progressive Disease (PD). The analysis was performed in all the subjects who were randomised.

End point type	Secondary
----------------	-----------

End point timeframe:

Randomisation up to 91 irPFS events (Approximately 19 months )

End point values	Ipilimumab	All Best Supportive care (BSC)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	57	57		
Units: Months				
median (confidence interval 95%)	2.727 (1.446	4.895 (3.45 to		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Overall survival (OS)

End point title	Overall survival (OS)
-----------------	-----------------------

End point description:

OS was defined as the time from the date of randomisation until the date of death. For those subjects who have not died, OS was censored on the last date the subject was known to be alive. Here, 99999 signifies data not estimable since the largest observation was censored.

End point type	Secondary
----------------	-----------

End point timeframe:

Randomisation up to end of study, April 2015 (Approximately 28 months)

End point values	Ipilimumab	All Best Supportive care (BSC)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	57	51		
Units: Months				
median (confidence interval 95%)	12.68 (10.51 to 18.92)	12.06 (9.33 to 99999)		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Percentage of Subjects With Immune-Related Best Overall Response (irBOR)

End point title	Percentage of Subjects With Immune-Related Best Overall Response (irBOR)
-----------------	--

End point description:

IrBOR rate was defined as the number of subjects whose Immune-related Best Overall Response (irBOR) criteria was Immune-related Complete Response (irCR) or Immune-related Partial Response (irPR), divided by the total number of subjects. The immune-related sum of products of diameters (irSPD) incorporates - in addition to the index lesions - measurable new lesions that may have developed on-study, providing an assessment that includes both index and new lesions. irCR=Complete disappearance of all tumor lesions (both index and non-index lesions with no new measurable/unmeasurable lesions). irPR=A 50% or greater decrease, relative to baseline of the irSPD, (based on irSPD of all index lesions and any measurable new lesions). The analysis was performed in all the subjects who were randomised.

End point type	Secondary
----------------	-----------

End point timeframe:

Randomisation up to 91 irPFS events (Approximately 19 months)

<b>End point values</b>	Ipilimumab	All Best Supportive care (BSC)

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 July 2012	The main purpose of the amendment was: • To modify the acceptable lead-in chemotherapy to allow a larger Japanese patient population to be included; • To add/clarify information on the women of Childbearing Potential (WOCBP) as per the most recent BMS policy; • To add specific language for immune-mediated Adverse Reactions; • To remove the mandatory bone scans; • Other administrative changes.
31 January 2013	The main purpose of the amendment was: • To allow subjects with a platelet count between 100,000 and 75,000 to enter the trial; • To add an additional acceptable lead-in chemotherapy • To add/clarify information on the definition of WOCBP; • Other minor changes to correct and/or clarify protocol requirements; • The amendment was applicable to all subjects; • The amendment will not impact data analysis.
08 May 2013	The main purpose of the amendment was: • To modify the requirement for local lab Free T3 and T4 testing at Screening from required to obtained if available, otherwise Total T3 and T4 testing is acceptable. • To allow Magnetic resonance imaging of the chest and remove the requirement for using the same scanner. • To remove the stipulation of not carrying out the interim analysis in case the timing of the interim analysis is within 6 months of the planned date of the primary analysis. • Other minor changes to correct and/or clarify protocol requirements.
28 March 2014	The main purpose of the amendment was to limit dosing of ipilimumab in the study to 3 years. The guidance for WOCBP was also clarified as per the most recent BMS policy. Other minor changes to correct and/or clarify protocol requirements.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
