

## Clinical trial results:

### An Open-label, Single-arm, Phase II, Multicentre Study to Evaluate the Efficacy of Vemurafenib in Metastatic Melanoma Patients with Brain Metastases

#### Summary

EudraCT number	2011-000954-46
Trial protocol	DE ES GB IT
Global end of trial date	21 July 2015

#### Results information

Result version number	v1 (current)
This version publication date	06 July 2016
First version publication date	06 July 2016

#### Trial information

##### Trial identification

Sponsor protocol code	MO25743
-----------------------	---------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01378975
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	F. Hoffmann-La Roche AG
Sponsor organisation address	Grenzacherstrasse 124, Basel, Switzerland, CH-4070
Public contact	F.Hoffmann-La Roche AG., F.Hoffmann-La Roche AG., 41 616878333, global.trial_information@roche.com
Scientific contact	F.Hoffmann-La Roche AG., F.Hoffmann-La Roche AG., 41 616878333, global.trial_information@roche.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 July 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	21 July 2015
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

- To evaluate the efficacy of vemurafenib using Best Overall Response Rate (BORR), as assessed by an Independent Review Committee (IRC) using Response Evaluation Criteria in Solid Tumors, Version 1.1 (RECIST, v1.1) in the brain of metastatic melanoma subjects with previously untreated brain metastases.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 June 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	24 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 18
Country: Number of subjects enrolled	United Kingdom: 10
Country: Number of subjects enrolled	France: 12
Country: Number of subjects enrolled	Germany: 30
Country: Number of subjects enrolled	Italy: 21
Country: Number of subjects enrolled	Australia: 7
Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	Israel: 3
Country: Number of subjects enrolled	Netherlands: 11
Country: Number of subjects enrolled	United States: 31
Worldwide total number of subjects	146
EEA total number of subjects	102

Notes:

### Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	108
From 65 to 84 years	38
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 289 subjects with metastatic melanoma were screened for entry into the study, out of which 146 subjects were enrolled in the study.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Cohort 1: Previously Untreated Subjects

Arm description:

Subjects who had not received previous treatment for brain metastases [i.e., had never received brain stereotactic radiotherapy (SRT), whole-brain radiotherapy (WBRT), surgery, or any other treatment for their brain metastases] received Vemurafenib 960 milligram (mg) tablet orally, twice daily (BID) from Day 1 until development of progressive disease within the brain or outside of the brain (whichever occurred first), unacceptable toxicity, consent withdrawal, protocol violation endangering subject's safety, death, reasons deemed by the investigator, or study termination by the Sponsor.

Arm type	Experimental
Investigational medicinal product name	Vemurafenib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

960 milligram (mg) oral doses twice daily from day 1 until disease progression, unacceptable toxicity or consent withdrawal.

<b>Arm title</b>	Cohort 2: Previously Treated Subjects
------------------	---------------------------------------

Arm description:

Subjects who were previously treated with brain SRT, WBRT, or surgery for their brain metastases and have progressed following this treatment, received Vemurafenib 960 milligram (mg) tablet orally, BID from Day 1 until development of progressive disease within the brain or outside of the brain (whichever occurred first), unacceptable toxicity, consent withdrawal, protocol violation endangering subject's safety, death, reasons deemed by the investigator, or study termination by the Sponsor.

Arm type	Experimental
Investigational medicinal product name	Vemurafenib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

960 mg oral doses twice daily from Day 1 until disease progression, unacceptable toxicity or consent withdrawal.

<b>Number of subjects in period 1</b>	<b>Cohort 1: Previously Untreated Subjects</b>	<b>Cohort 2: Previously Treated Subjects</b>
Started	90	56
Completed	4	6
Not completed	86	50
Withdrew Consent	4	3
Investigator Request	1	-
Death	77	46
Lost to follow-up	4	1

## Baseline characteristics

### Reporting groups

Reporting group title	Cohort 1: Previously Untreated Subjects
-----------------------	---

Reporting group description:

Subjects who had not received previous treatment for brain metastases [i.e., had never received brain stereotactic radiotherapy (SRT), whole-brain radiotherapy (WBRT), surgery, or any other treatment for their brain metastases] received Vemurafenib 960 milligram (mg) tablet orally, twice daily (BID) from Day 1 until development of progressive disease within the brain or outside of the brain (whichever occurred first), unacceptable toxicity, consent withdrawal, protocol violation endangering subject's safety, death, reasons deemed by the investigator, or study termination by the Sponsor.

Reporting group title	Cohort 2: Previously Treated Subjects
-----------------------	---------------------------------------

Reporting group description:

Subjects who were previously treated with brain SRT, WBRT, or surgery for their brain metastases and have progressed following this treatment, received Vemurafenib 960 milligram (mg) tablet orally, BID from Day 1 until development of progressive disease within the brain or outside of the brain (whichever occurred first), unacceptable toxicity, consent withdrawal, protocol violation endangering subject's safety, death, reasons deemed by the investigator, or study termination by the Sponsor.

Reporting group values	Cohort 1: Previously Untreated Subjects	Cohort 2: Previously Treated Subjects	Total
Number of subjects	90	56	146
Age categorical Units: Subjects			
In utero			0
Preterm newborn infants (gestational age < 37 wks)			0
Newborns (0-27 days)			0
Infants and toddlers (28 days-23 months)			0
Children (2-11 years)			0
Adolescents (12-17 years)			0
Adults (18-64 years)			0
From 65-84 years			0
85 years and over			0
Age continuous Units: years			
arithmetic mean	55.7	52.7	
standard deviation	± 12.73	± 13.85	-
Gender categorical Units: Subjects			
Female	34	22	56
Male	56	34	90

## End points

### End points reporting groups

Reporting group title	Cohort 1: Previously Untreated Subjects
Reporting group description:	
Subjects who had not received previous treatment for brain metastases [i.e., had never received brain stereotactic radiotherapy (SRT), whole-brain radiotherapy (WBRT), surgery, or any other treatment for their brain metastases] received Vemurafenib 960 milligram (mg) tablet orally, twice daily (BID) from Day 1 until development of progressive disease within the brain or outside of the brain (whichever occurred first), unacceptable toxicity, consent withdrawal, protocol violation endangering subject's safety, death, reasons deemed by the investigator, or study termination by the Sponsor.	
Reporting group title	Cohort 2: Previously Treated Subjects
Reporting group description:	
Subjects who were previously treated with brain SRT, WBRT, or surgery for their brain metastases and have progressed following this treatment, received Vemurafenib 960 milligram (mg) tablet orally, BID from Day 1 until development of progressive disease within the brain or outside of the brain (whichever occurred first), unacceptable toxicity, consent withdrawal, protocol violation endangering subject's safety, death, reasons deemed by the investigator, or study termination by the Sponsor.	

### Primary: Best Overall Response Rate (BORR) Within Brain of Previously Untreated Subjects (Assessed by Independent Review Committee [IRC] Using Modified Response Evaluation Criteria in Solid Tumors [RECIST])

End point title	Best Overall Response Rate (BORR) Within Brain of Previously Untreated Subjects (Assessed by Independent Review Committee [IRC] Using Modified Response Evaluation Criteria in Solid Tumors [RECIST]) <sup>[1][2]</sup>
End point description:	
BORR assessed by IRC is defined as percentage of subjects who were responders (with best overall response (BOR) documented as confirmed complete response [CR] or partial response [PR]). The RECIST v1.1 criteria modified for independent review of body and brain lesions was based on current radiology practices. The modifications to RECIST v1.1 included allowing target lesions in brain to be $\geq 5$ mm by contrast-enhanced magnetic resonance imaging scan (RECIST v1.1 this is $\geq 10$ mm), allowing up to 5 target lesions in brain (RECIST v1.1 only 2 target lesions), and examining lesions within brain and outside the brain separately for analytical purposes. CR: disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to $< 10$ mm, PR: At least a 30% decrease in sum of diameters of target lesions, taking as reference baseline sum diameters. The intent-to-treat (ITT) population included all subjects who were enrolled in study.	
End point type	Primary
End point timeframe:	
From the date of randomisation until the disease progression or death from any cause (approximately 4 years)	

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned to be reported.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The data for this endpoint was planned to be reported for one reporting arm (Cohort 2: Previously Untreated Subjects).

End point values	Cohort 1: Previously Untreated Subjects			
Subject group type	Reporting group			
Number of subjects analysed	90			
Units: percentage of subjects				
number (confidence interval 95%)	17.8 (10.5 to 27.3)			

## Statistical analyses

No statistical analyses for this end point

## Secondary: Best Overall Response Rate (BORR) in the Brain of Subjects With Previously Treated or Untreated Brain Metastases as Assessed by the IRC Using RECIST v1.1

End point title	Best Overall Response Rate (BORR) in the Brain of Subjects With Previously Treated or Untreated Brain Metastases as Assessed by the IRC Using RECIST v1.1
-----------------	---

End point description:

Percentage of subjects who were responders with best overall response (BOR) documented as confirmed CR, PR, SD, PD. CR: disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm. PR: At least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum diameters. SD: neither sufficient shrinkage to qualify for PR nor sufficient increase to qualify for PD, taking as reference the smallest sum diameters while on study. PD: at least a 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum on study (this includes the baseline sum if that is the smallest on study). In addition to the relative increase of 20%, the sum must also demonstrate an absolute increase of at least 5 mm. The ITT population included all subjects who were enrolled in the study.

End point type	Secondary
----------------	-----------

End point timeframe:

From the date of randomisation until the disease progression or death from any cause (approximately 4 years)

End point values	Cohort 1: Previously Untreated Subjects	Cohort 2: Previously Treated Subjects		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	90	56		
Units: percentage of subjects				
number (not applicable)				
Complete Response	2.2	0		
Partial Response	15.6	17.9		
Stable Disease	43.3	41.1		
Progressive Disease	32.2	33.9		
Unevaluable	6.7	7.1		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Best Overall Response Rate (BORR) in the Brain of Subject With Previously Treated Brain Metastases as Assessed by the IRC Using RECIST v1.1

End point title	Best Overall Response Rate (BORR) in the Brain of Subject With Previously Treated Brain Metastases as Assessed by the IRC Using RECIST v1.1 <sup>[3]</sup>
-----------------	--

End point description:

BORR within brain assessed by IRC is defined as percentage of subjects who were responders (with BOR documented as confirmed CR or PR). According to RECIST v1.1 criteria modified for brain metastases, CR: disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm, PR: At least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum diameters. The ITT population included all subjects who were enrolled in the study.

End point type	Secondary
----------------	-----------

End point timeframe:

From the date of randomisation until the disease progression or death from any cause (approximately 4 years)

Notes:

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The data for this endpoint was planned to be reported for one reporting arm (Cohort 2: Previously Treated Subjects).

<b>End point values</b>	Cohort 2: Previously Treated Subjects			
Subject group type	Reporting group			
Number of subjects analysed	56			
Units: percentage of subjects				
number (confidence interval 95%)	17.9 (8.9 to 30.4)			

## Statistical analyses

No statistical analyses for this end point

### Secondary: Best Overall Response Rate Outside the Brain (Assessed by IRC)

End point title	Best Overall Response Rate Outside the Brain (Assessed by IRC)
-----------------	--

End point description:

BORR outside of brain assessed by IRC is defined as percentage of subjects who were responders (with BOR documented as confirmed CR or PR). According to RECIST v1.1 criteria modified for brain metastases, CR: disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm, PR: At least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum diameters. The ITT population included all subject who were enrolled in the study. Here, number of subjects analysed is the total number of subjects who had measurable disease outside brain at Baseline.

End point type	Secondary
----------------	-----------

End point timeframe:

From the date of randomisation until the disease progression or death from any cause (approximately 4 years)

End point values	Cohort 1: Previously Untreated Subjects	Cohort 2: Previously Treated Subjects		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	79	49		
Units: percentage of subjects				
number (confidence interval 95%)	32.9 (22.7 to 44.4)	22.5 (10.8 to 38.5)		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Duration of Response (DOR) (Assessed by Investigator and IRC)

End point title	Duration of Response (DOR) (Assessed by Investigator and IRC)
-----------------	---

End point description:

Duration of response was defined as the time interval between the date of the earliest qualifying response and the earliest date of PD or death from any cause. For subject who were alive without progression following the qualifying response, DOR were censored on the date of last available tumor assessment on or before the data cutoff date. The ITT population included all subjects who were enrolled in the study. Here, 'n' indicates number of subjects who were responders within brain or outside brain assessed by investigator or IRC.

End point type	Secondary
----------------	-----------

End point timeframe:

Date of the earliest qualifying response until the earliest date of PD or death from any cause (approximately up to 4 years)

End point values	Cohort 1: Previously Untreated Subjects	Cohort 2: Previously Treated Subjects		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	90	56		
Units: months				
median (full range (min-max))				
Investigator: DOR (Within Brain) (n=26, 13)	4.67 (2.66 to 24.21)	6.64 (1.87 to 21.98)		
Investigator: DOR (Outside Brain) (n=25, 11)	5.55 (1.84 to 25.63)	10.74 (1.84 to 23.1)		
IRC: DOR (Within Brain) (n=16, 10)	4.6 (2.66 to 29.9)	6.64 (0.95 to 18.4)		
IRC: DOR (Outside Brain) (n=26, 9)	7.72 (1.84 to 21.55)	11.07 (1.84 to 23.1)		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Progression-Free Survival (PFS) Based on Overall Tumor Response (Assessed by Investigator)

End point title	Progression-Free Survival (PFS) Based on Overall Tumor Response (Assessed by Investigator)
-----------------	--

End point description:

Progression-free survival was defined as the time between enrollment on Day 1 and the date of first radiographically documented progressive disease (within or outside the brain), clinical progressive disease, as assessed by the investigator or death whichever occurred first. The ITT population included all subjects who were enrolled in the study.

End point type	Secondary
----------------	-----------

End point timeframe:

From the date of randomisation until the disease progression or death from any cause (approximately 4 years)

End point values	Cohort 1: Previously Untreated Subjects	Cohort 2: Previously Treated Subjects		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	90	56		
Units: months				
median (full range (min-max))	3.65 (0.3 to 33.35)	3.71 (0.26 to 27.37)		

## Statistical analyses

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 February 2012	<ul style="list-style-type: none"><li>• The start-of-screening date was taken as date on which first archival tumor tissue sample was sent (collected by courier) to the central testing laboratory for BRAF mutation testing EXCEPT when a study procedure is performed prior to sending tumor sample to laboratory (e.g., if a new tumor biopsy sample must be taken from subject).</li><li>• Monitoring of any possible additional cancerous growths and determination of their type(s) was added to the study procedures during the screening period, treatment period, treatment discontinuation, and follow-up visit. The ICF also was updated with this information.</li><li>• A clarification was added denoting that only a protocol violation that endangers subject safety will mandate discontinuation of study treatment.</li><li>• An additional subgroup analysis within previously treated cohort for subjects with leptomeningeal involvement versus subjects with no leptomeningeal involvement in the previously treated cohort was planned.</li><li>• Exclusion criterion 5 was changed to align with ongoing vemurafenib studies and based on recommendation from the Steering Committee.</li><li>• The follow-up of chest CT for evaluation of non-cuSCC was conservatively increased from 3 to 6 months.</li><li>• A statement was added to clarify that cuSCC should be reported as an SAE instead of an AE of special interest to ensure its reporting to the Health Authorities in an appropriate and timely manner.</li><li>• A statement was added that available biopsies from all suspicious lesions should be sent to the study-designated central pathology laboratory to ensure available specimen blocks from any suspicious lesions (including keratoacanthoma/cuSCC or new primary melanoma) are sent to a designated central pathology laboratory for the confirmation of diagnosis.</li><li>• A clarification on safety reporting due to progression of the underlying malignancy was added, stating that, "An SAE with outcome death solely due to progression of the underlying malignancy does not need to be reported as an SAE".</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
