Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 May 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	05 May 2018
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The main objective of this trial was to assess the efficacy of canakinumab treatment for subjects with adult-onset Still's disease (AOSD) and active joint involvement according to the proportion of subjects with a significant reduction of disease activity (DAS 28 [>1.2]) after 12 week treatment period and to evaluate the long-term safety of canakinumab in subjects with AOSD and articular involvement.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 May 2012
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	27 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 36
Worldwide total number of subjects	36
EEA total number of subjects	36

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	34
From 65 to 84 years	2

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

Subjects with adult-onset Still's disease (AOSD) took part in the study from June 21, 2012 to May 5, 2018 at 14 investigative sites located in Germany to participate in two double-blind parts - Part I (Up to Week 12) and Part II (Up to Week 24) and one open-label Long-Term Extension (LTE) phase (Up to Month 27).

Pre-assignment

Screening details:

A total of 36 subjects entered in Part I to receive canakinumab/placebo. Out of 31, 5 subjects from the canakinumab group and 3 from placebo group did not enter Part II, 23 subjects entered Part II, and received canakinumab or placebo up to Week 24. 7 subjects who achieved clinical remission entered LTE Phase to receive canakinumab.

Pre-assignment period milestones

Number of subjects started	36
Number of subjects completed	35

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Subject Met One or More Exclusion Criteria: 1
----------------------------	---

Period 1

Period 1 title	Core Study Part I
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Canakinumab
------------------	-------------

Arm description:

Subjects received canakinumab 4 mg/kg up to a 300 mg maximum, subcutaneous (SC) injection, once in morning at Baseline (Day 0), Weeks 4, 8, and 12.

Arm type	Experimental
Investigational medicinal product name	Canakinumab
Investigational medicinal product code	EU/1/09/564/004
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Canakinumab, single-dose 4 mg/kg up to 300 mg administered subcutaneously.

Arm title	Placebo
------------------	---------

Arm description:

Subjects received placebo, SC injection, once in morning at Baseline (Day 0), Weeks 4, 8, and 12.

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Matched placebo, administered subcutaneously.

Number of subjects in period 1^[1]	Canakinumab	Placebo
Started	18	17
Completed	17	14
Not completed	1	3
Physician decision	-	3
Adverse event, non-fatal	1	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: One subject left the study before the start of the treatment as he/she did not meet or more exclusion criteria and was excluded from the efficacy analysis set.

Period 2

Period 2 title	Core Study Part II
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Canakinumab Responders

Arm description:

Subjects with response (change in DAS score > 1.2 at Week 12) continued to receive canakinumab 4 mg/kg up to 300 mg maximum, SC injection, once in the morning for Weeks 12, 16, and 20.

Arm type	Experimental
Investigational medicinal product name	Canakinumab
Investigational medicinal product code	EU/1/09/564/004
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Canakinumab, single-dose 4 mg/kg up to 300 mg administered subcutaneously.

Arm title	Placebo Responders
------------------	--------------------

Arm description:

Subjects with response (change in DAS score > 1.2 at Week 12) continued to receive placebo, SC injection, once in morning for Weeks 12, 16, and 20.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use
Dosage and administration details: Matched placebo, administered subcutaneously.	
Arm title	Placebo Non-responders

Arm description:

Non-responders (change in DAS score ≤ 1.2 at Week 12) who switched to canakinumab were unblinded to receive canakinumab 4 mg/kg up to 300 mg maximum, SC injection, once in the morning at Weeks 12, 16, and 20.

Arm type	Experimental
Investigational medicinal product name	Canakinumab
Investigational medicinal product code	EU/1/09/564/004
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Canakinumab, single-dose 4 mg/kg up to 300 mg administered subcutaneously.

Number of subjects in period 2^[2]	Canakinumab Responders	Placebo Responders	Placebo Non-responders
Started	12	4	7
Completed	12	4	7

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Out of 31, 5 subjects from the canakinumab group and 3 from placebo group did not enter Part II of the study.

Period 3

Period 3 title	LTE Phase
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Canakinumab
------------------	-------------

Arm description:

Subjects with remission (change in DAS score > 1.2 and no signs of systemic activity for adult-onset Still's disease at Week 20) received canakinumab 4 mg/kg up to 300 mg maximum, SC injection at Weeks 24 and 28, which was down titrated to 2 mg/kg up to 150 mg maximum if applicable after Week 28 up to Month 27 (Week 117).

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Canakinumab
Investigational medicinal product code	EU/1/09/564/004
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Canakinumab, single-dose 4 mg/kg up to 300 mg administered subcutaneously.

Number of subjects in period 3^[3]	Canakinumab
Started	7
Completed	0
Not completed	7
Study Suspended	7

Notes:

[3] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Subjects who achieved remission only entered LTE Phase.

Baseline characteristics

Reporting groups

Reporting group title	Canakinumab
Reporting group description:

Primary: Core Study Part I: Percentage of Responders as Assessed Disease Activity Score 28 Joints (DAS28) Score at Week 12

End point title	Core Study Part I: Percentage of Responders as Assessed Disease Activity Score 28 Joints (DAS28) Score at Week 12
-----------------	---

End point description:

Responders included subjects with change in DAS28 score > 1.2. The DAS28 index is a composite score of weighted components including tender joint counts of 28, swollen joint counts of 28, patient global assessment of disease activity score, and the erythrocyte sedimentation rate (ESR) value. Total score ranged between 0-10. A DAS28-ESR score of 5.1 or above = high disease activity, a value between 3.2 and 5.1 = moderate disease activity and value between 2.6 and 3.2 = low disease activity, value < 2.6 = disease remission. ITT population included all subjects who did not violate any of the following inclusion criteria: diagnosis of adult-onset still's disease and disease activity based on DAS28 of greater than or equal to 3.2 at Screening.

**Secondary: Core Study Part I: Change in Joint Mobility (Degrees of Motion)
Assessed by Neutral Zero Method**

End point title	Core Study Part I: Change in Joint Mobility (Degrees of Motion) Assessed by Neutral Zero Method
-----------------	--

End point description:

Number of joints with limitation of motion according to neutral zero method was assessed which included mobility of joints (elbows, wrists, shoulder joints, hip joints, knee joints, and upper ankle joints) within the reference range/degree. Response is defined as an improvement of $\geq 30\%$, 50%, 70% and 90% from Baseline. A negative change score indicates improvement. LS mean was calculated by MMRM analyses. ITT population included all subjects who did not violate any of the following inclusion criteria: diagnosis of adult-onset Still's disease and disease activity based on DAS28 score of greater than or equal to 3.2 at Screening. Number analysed is the number of subjects with data available for analyses at the given timepoint.

End point type	Secondary

Secondary: Core Study Part I: CFB in Medical Outcome Short Form (SF-36) Health Survey Score

End point title	Core Study Part I: CFB in Medical Outcome Short Form (SF-36) Health Survey Score
-----------------	---

End point description:

The SF-36 determines overall quality of life assessing 1) limitations in physical functioning due to health problems; 2) limitations in usual role because of physical health problems; 3) bodily pain; 4) general health perceptions; 5) vitality; 6) limitations in social functioning because of physical or emotional problems; 7) limitations in usual role due to emotional problems; and 8) general mental health. Items 1-4 contribute to physical component summary score (PCS). Items 5-8 contribute to mental component summary score (MCS). Scores on each item are summed and averaged (range = 0 "worst"-100 "best"). Positive numbers indicate improvement from Baseline. LS mean was calculated by MMRM analyses. ITT population: subjects who did not violate any of following inclusion criteria: diagnosis of adult-onset Still's disease and disease activity based on DAS28 score of ≥ 1.2 at Screening. Number analysed is number of subjects with data available for analyses at given timepoint.

Secondary: Number of Subjects With Adverse Events (AEs) and Serious Adverse Events (SAEs)

End point title	Number of Subjects With Adverse Events (AEs) and Serious Adverse Events (SAEs)
-----------------	--

End point description:

An AE is an adverse medical event which occurs in a subject of the study and which is not necessarily in a causal relationship with the treatment the subject receives. AEs include symptoms of illnesses, as well as every unfavourable and unintended reaction. SAEs are AEs leading to death, are life-threatening, require hospitalizations or prolongation of hospitalizations, represent an innate malformation or a congenital abnormality. Safety Analysis Set included all subjects randomized who received at least one dose of the study drug.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to Month 27

Adverse event reporting additional description:

Safety Analysis Set included all subjects randomized who received at least one dose of the study drug. 2 subjects of the placebo group in Part I received canakinumab at Week 4, as protocol violation, thus, Safety Analysis Set included those additional 2 subjects in the canakinumab group.

Assessment type	Systematic

--------------------	------

Reporting groups

Reporting group title	Core Study Part I: Canakinumab
-----------------------	--------------------------------

Reporting group description:

Subjects received canakinumab 4 mg/kg up to 300 mg maximum, subcutaneous (SC) injection, once in morning at Baseline (Day 0), Weeks 4, 8, and 12.

Reporting group title	Core Study Part I: Placebo
-----------------------	----------------------------

Reporting group description:

Subjects received placebo, SC injection, once in morning at Baseline (Day 0), Weeks 4, 8, and 12.

Reporting group title	Core Study Part II: Canakinumab Responders
-----------------------	--

Reporting group description:

Subjects with response (change in DAS score > 1.2 at Week 12) continued to receive canakinumab 4 mg/kg up to 300 mg maximum, SC injection, once in the morning for Weeks 12, 16, and 20.

Reporting group title	Core Study Part II: Placebo Responders
-----------------------	--

Reporting group description:

Subjects with response (change in DAS score > 1.2 at Week 12) continued to receive placebo, SC injection, once in morning for Weeks 12, 16, and 20.

Reporting group title	Core Study Part II: Placebo Non-responder
-----------------------	---

Reporting group description:

Non-responders (change in DAS score ≤ 1.2 at Week 12) who switched to canakinumab were unblinded to receive canakinumab 4 mg/kg up to 300 mg maximum, SC injection, once in the morning at Weeks 12, 16, and 20.

Reporting group title	LTE Phase: Canakinumab
-----------------------	------------------------

Reporting group description:

Subjects with remission (change in DAS score > 1.2 and no signs of systemic activity for adult-onset Still's disease at Week 20) received canakinumab 4 mg/kg up to 300 mg maximum, SC injection at Weeks 24 and 28, which was down titrated to 2 mg/kg up to 150 mg maximum if applicable after Week 28 up to Month 27 (Week 117).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
05 May 2018	The study terminated prior to the planned completion date due to recruitment issues because of the marketing authorization of the study drug.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Early termination due to recruitment issues as adult-onset Still's disease is a rare disease.

Notes:
