

## Clinical trial results:

### A Phase 2, Single-arm, Open-label, Multicenter Study of the Histone Deacetylase Inhibitor (HDACi) JNJ-26481585 in Subjects With Previously Treated Stage Ib-IVa Cutaneous T-cell Lymphoma

#### Summary

EudraCT number	2011-001076-18
Trial protocol	DE GB ES PT IT
Global end of trial date	22 July 2016

#### Results information

Result version number	v1 (current)
This version publication date	13 July 2017
First version publication date	13 July 2017

#### Trial information

##### Trial identification

Sponsor protocol code	26481585LYM2001
-----------------------	-----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01486277
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

Analysis stage	Final
Date of interim/final analysis	22 July 2016
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	22 July 2016
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

Main objective of the trial:

The primary objective was to determine the overall cutaneous response rate (RR) based on the modified Severity Weighted Assessment Tool (mSWAT) criteria.

Protection of trial subjects:

The safety assessments included monitoring of adverse events (AEs), changes in clinical laboratory test values (serum chemistry, hematology, pregnancy test), physical examination results and electrocardiogram (ECG).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 November 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

---

**Population of trial subjects****Subjects enrolled per country**

Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	United Kingdom: 9
Country: Number of subjects enrolled	Italy: 2
Country: Number of subjects enrolled	Portugal: 3
Country: Number of subjects enrolled	United States: 1
Worldwide total number of subjects	26
EEA total number of subjects	25

Notes:

---

**Subjects enrolled per age group**

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	15
From 65 to 84 years	11
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted from 30 November 2011 to 22 July 2016 at 17 sites in 7 countries.

### Pre-assignment

Screening details:

A total of 26 subjects were enrolled in study; out of these 25 subjects were evaluable for response and 1 subject discontinued the study.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Quisinostat 8 milligram (mg)

Arm description:

Subjects with Stage Ib to IVa cutaneous T-cell lymphoma (CTCL) received quisinostat 8 mg orally on Days 1, 3, and 5 of each week in 21-day treatment cycles until disease progression, toxicity, availability of other effective drugs that the subject may receive, or treating physician advice. Subjects who were initially randomized to the JNJ-26481585 (quisinostat) 8 mg dose cohort were allowed to have their dose increased to 12 mg after study was amended to remove 8 mg arm.

Arm type	Experimental
Investigational medicinal product name	Quisinostat 8 mg
Investigational medicinal product code	JNJ-26481585
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received quisinostat 8 mg orally on Days 1, 3, and 5 of each week in 21-day treatment cycles.

<b>Arm title</b>	Quisinostat 12 mg
------------------	-------------------

Arm description:

Subjects with Stage Ib to IVa cutaneous T-cell lymphoma (CTCL) received JNJ-26481585 (quisinostat) 12 mg orally on Days 1, 3, and 5 of each week in 21-day treatment cycles until disease progression, toxicity, availability of other effective drugs that the subject may receive, or treating physician advice.

Arm type	Experimental
Investigational medicinal product name	Quisinostat 12 mg
Investigational medicinal product code	JNJ-26481585
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received quisinostat 12 mg orally on Days 1, 3, and 5 of each week in 21-day treatment cycle.

<b>Number of subjects in period 1</b>	Quisinostat 8 milligram (mg)	Quisinostat 12 mg
Started	6	20
Completed	2	3
Not completed	4	17
Adverse event, serious fatal	1	3
Physician decision	-	2
Other	3	10
Lost to follow-up	-	2

## Baseline characteristics

### Reporting groups

Reporting group title	Quisinostat 8 milligram (mg)
-----------------------	------------------------------

## End points

### End points reporting groups

Reporting group title	Quisinostat 8 milligram (mg)
Reporting group description:	
Subjects with Stage Ib to IVa cutaneous T-cell lymphoma (CTCL) received quisinostat 8 mg orally on Days 1, 3, and 5 of each week in 21-day treatment cycles until disease progression, toxicity, availability of other effective drugs that the subject may receive, or treating physician advice. Subjects who were initially randomized to the JNJ-26481585 (quisinostat) 8 mg dose cohort were allowed to have their dose increased to 12 mg after study was amended to remove 8 mg arm.	
Reporting group title	Quisinostat 12 mg
Reporting group description:	
Subjects with Stage Ib to IVa cutaneous T-cell lymphoma (CTCL) received JNJ-26481585 (quisinostat) 12 mg orally on Days 1, 3, and 5 of each week in 21-day treatment cycles until disease progression, toxicity, availability of other effective drugs that the subject may receive, or treating physician advice.	

### Primary: Percentage of Subjects Who Achieved Overall Cutaneous Response Based on Modified Severity Weighted Assessment Tool (mSWAT) Criteria

End point title	Percentage of Subjects Who Achieved Overall Cutaneous Response Based on Modified Severity Weighted Assessment Tool (mSWAT) Criteria <sup>[1]</sup>
End point description:	
Overall cutaneous response rate (RR) is defined as the percentage of evaluable subjects who achieved a complete response {CR (complete disappearance of all cutaneous disease)} or partial response (PR {greater than or equal to [ $\geq$ ] 50 percent (%) reduction in mSWAT score compared with baseline}). mSWAT criteria was used to evaluate the skin tumor burden. The investigator was determine the percentage of total body surface area (TBSA) affected by patches, plaques or tumors in 12 body regions, using the subject's palm and fingers representing 1% of TBSA. The response evaluable population consisted of all subjects who received at least 1 dose of study drug and had a posttreatment disease assessment to allow for comparison to the baseline assessment.	
End point type	Primary
End point timeframe:	
From screening until progressive disease or confirmed lost to follow-up or death from any cause or start of alternate therapy, or withdrawal from the study (up to 6 months after the enrollment of the last subject)	
Notes:	
[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.	
Justification: Only descriptive data was reported and no statistical analysis was performed for this specific end point.	

End point values	Quisinostat 8 milligram (mg)	Quisinostat 12 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	6	19		
Units: Percentage of subjects				
number (confidence interval 95%)	16.7 (0.4 to 64.1)	26.3 (9.2 to 51.2)		

### Statistical analyses

No statistical analyses for this end point

## Secondary: Percentage of Subjects Who Achieved Overall Global RR Based on The Consensus Global Response Score

End point title	Percentage of Subjects Who Achieved Overall Global RR Based on The Consensus Global Response Score
-----------------	--

End point description:

Overall global RR is defined as the percentage of subjects who achieved CR (complete response) or PR (partial response) based on the consensus global response score for mycosis fungoides/ Sezary Syndrome (MF/SS) [defined as the total score of tumor, lymph nodes, metastasis, blood (TNMB) staging, ie, cutaneous disease, lymph nodes, viscera and blood. Complete response is defined as complete disappearance of all clinical evidence of disease (all categories have CR/ non-involved [NI]) and PR is defined as regression of measurable disease (all categories do not have a CR/NI and no category has a PD and if any other category involved at baseline, at least one has a CR or PR). The response evaluable population consisted of all subjects who received at least 1 dose of study drug and had a posttreatment disease assessment to allow for comparison to the baseline assessment.

End point type	Secondary
----------------	-----------

End point timeframe:

From screening until progressive disease or confirmed lost to follow-up or death from any cause or start of alternate therapy, or withdrawal from the study (up to 6 months after the enrollment of the last subject)

End point values	Quisinostat 8 milligram (mg)	Quisinostat 12 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	6	19		
Units: Percentage of subjects				
number (not applicable)	0	13.3		

## Statistical analyses

No statistical analyses for this end point

## Secondary: Progression-Free Survival (PFS)

End point title	Progression-Free Survival (PFS)
-----------------	---------------------------------

End point description:

PFS is defined as the interval between the date of administration of the first dose of study drug and the date of disease progression or death from any cause, whichever occurred first. PFS is estimated by Kaplan-Meier (K-M) method. Here, '99999' for upper limit of CI represents that data was not estimable due to low number of events observed during the short follow-up duration. The subjects treated analysis set consisted of all subjects who received at least 1 dose of study drug.

End point type	Secondary
----------------	-----------

End point timeframe:

From the date of administration of the first dose of study medication until progressive disease or death from any cause, whichever occurs first (up to 6 months after the enrollment of the last subject)

End point values	Quisinostat 8 milligram (mg)	Quisinostat 12 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	6	20		
Units: months				
median (confidence interval 95%)	3.83 (0.72 to 99999)	5.09 (2.1 to 8.31)		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Duration of Response (DOR)

End point title	Duration of Response (DOR)
-----------------	----------------------------

End point description:

Duration of response was defined only for subjects who have CR or PR as best overall response in skin based on mSWAT and is defined as the date from the first documentation of CR or PR until the date of first documentation of progressive disease (PD), or death from any cause. Here 'N' represents the number of subjects who received at least 1 dose of study drug and who achieved a response. '99999' for median and CI represents data was not estimable because the 1 subject in this arm was censored from the analysis (Quisinostat 8 mg) and for upper limit of CI (Quisinostat 12 mg) due to low number of events observed during the follow-up.

End point type	Secondary
----------------	-----------

End point timeframe:

First documentation of CR or PR until the date of first documentation of progressive disease, or death from any cause; as assessed for approximately 6 months after the enrollment of the last subject

End point values	Quisinostat 8 milligram (mg)	Quisinostat 12 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	1	5		
Units: months				
median (confidence interval 95%)	99999 (99999 to 99999)	4.86 (3.02 to 99999)		

## Statistical analyses

No statistical analyses for this end point

### Secondary: 9-Month Overall Survival (OS) Rate

End point title	9-Month Overall Survival (OS) Rate
-----------------	------------------------------------

End point description:

The 9-month OS rate was defined as the K-M estimate of the proportion of subjects surviving at least 9 months after the date of administration of the first dose of study drug. The subjects treated analysis set consisted of all subjects who received at least 1 dose of study drug.

End point type	Secondary
----------------	-----------

End point timeframe:

Month 9

End point values	Quisinostat 8 milligram (mg)	Quisinostat 12 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	6	20		
Units: proportion of subjects				
number (confidence interval 95%)	0.83 (0.27 to 0.97)	0.83 (0.57 to 0.94)		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Number of Subjects with Pruritus Relief Measured by Pruritus Intensity Assessment (PIA) Questionnaire Scale Scores

End point title	Number of Subjects with Pruritus Relief Measured by Pruritus Intensity Assessment (PIA) Questionnaire Scale Scores
-----------------	--

End point description:

Pruritus relief was defined as a reduction from baseline of equal or greater than ( $\geq$ ) 3 points on the 11 point PIA numeric rating scale or complete resolution for  $\geq 3$  continuous weeks. The PIA scores ranges from '0= no pruritus; 10 = worst imaginable'. The response evaluable population consisted of all subjects who received at least 1 dose of study drug and had a posttreatment disease assessment to allow for comparison to the baseline assessment.

End point type	Secondary
----------------	-----------

End point timeframe:

From screening until progressive disease or confirmed lost to follow-up or death from any cause or start of alternate therapy, or withdrawal from the study (up to 6 months after the enrollment of the last subject)

End point values	Quisinostat 8 milligram (mg)	Quisinostat 12 mg

### Secondary: European Organization for Research and Treatment of Cancer Quality of Life Questionnaire (EORTC QLQ-C30) Score

End point title	European Organization for Research and Treatment of Cancer Quality of Life Questionnaire (EORTC QLQ-C30) Score
-----------------	--

End point description:

EORTC QLQ-C30 is a questionnaire to assess quality of life of cancer patients. For the multiple item

measure, 100-point scale is used. For Global Health the functional scales (physical, role, emotional, cognitive and social functioning), higher scores represent better health. The subjects treated analysis set consisted of all subjects who received at least 1 dose of study drug. Here 'n' represents the number of subjects analyzed for this specific category for this endpoint. '99999' for standard deviation represents that data could not be estimated and '99999' for follow up categories of quinostat 8 mg reporting group represents that data was not analyzed as subjects were moved to quinostat 12 mg group after amendment.

End point type	Secondary
----------------	-----------

End point timeframe:

From screening until progressive disease or confirmed lost to follow-up or death from any cause or start of alternate therapy, or withdrawal from the study (up to 6 months after the enrollment of the last subject)

End point values	Quisinostat 8 milligram (mg)	Quisinostat 12 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	6	20		
Units: Units on a scale				
arithmetic mean (standard deviation)				
Physical functioning: Cycle 16 (n=1,1)	100 (± 99999)	100 (± 99999)		
Physical functioning: Follow up (n=0,2)	99999 (± 99999)	100 (± 0)

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 November 2011	Amendment included that the 8 milligram (mg) dose cohort and randomization procedure was removed. Subjects enrolled in the 8 mg cohort was allowed to receive the 12 mg dose without evidence of disease progression. The Simon 2-stage Minimax Design was no longer be incorporated because the 8 mg dose cohort has been eliminated. The sample size for the study was adjusted because of the removal of the low-dose cohort and elimination of the 2-stage design. The primary purpose of the interim analysis was to provide an early assessment of safety and efficacy of the recommended Phase 2 dose and a lower dose in order to minimize exposing subjects to an ineffective treatment. It is expected that accrual and treatment was proceeded quickly relative to the data available to base decisions on risk and benefit, thus eliminating the need for an interim analysis. Any exploratory statistical comparisons between the 2 treatment groups are no longer relevant because of the elimination of the 8 mg dose cohort. The lymph node classification international society for cutaneous lymphomas/european organization for research and treatment of cancer (ISCL/EORTC) has been modified to include central lymph nodes. A concern of repeated radiological assessment (CT/MRI) over a short time period was raised by investigators. This change allows the use of data obtained before informed consent if the tests were performed within a reasonable timeframe before the first dose of study medication. Reducing the recovery time following prior systemic therapy from at least 3 weeks to 2 weeks gave more flexibility in enrolling subjects to this study. Clarification of dose modification for toxicity in response to suggestions by health authorities and investigators. Clarification that biomarker analyses are dependent on the availability of assays. Biomarker analyses may not be performed if it is considered they was provided no useful scientific information. Minor errors were noted.
03 September 2014	Amendment was done to modify the long-term extension phase to allow subjects who were on study to continue receiving treatment beyond the 2-year clinical cutoff.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study was amended to remove the 8 mg dose level arm and subjects enrolled at 8 mg were allowed to dose escalate to 12 mg. The removal of the 8 mg dose arm eliminated the potential for assessment of a dose response relationship on efficacy and safety.

Notes:
