

## Clinical trial results:

### A Randomized, Phase IIb/III Study of Ganetespib (STA-9090) in Combination with Docetaxel versus Docetaxel alone in Subjects with Stage IIb or IV Non-Small Cell Lung Cancer

#### Summary

EudraCT number	2011-001084-42
Trial protocol	CZ DE GB HU ES BE PL
Global end of trial date	04 November 2015

#### Results information

Result version number	v1 (current)
This version publication date	02 April 2016
First version publication date	02 April 2016

#### Trial information

##### Trial identification

Sponsor protocol code	9090-08
-----------------------	---------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01348126
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 December 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	04 November 2015
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

Randomized multicenter, parallel group study of patients with Stage IIIB or IV NSCLC who failed 1 prior systemic therapy for advanced disease and had measurable disease, as defined by RECIST criteria .

Stage 1

- Evaluate progression-free survival (PFS) in subjects with non-small-cell lung cancer (NSCLC) with adenocarcinoma histology who present with elevated baseline total lactate dehydrogenase (LDH), treated with the combination of ganetespib and docetaxel compared to docetaxel alone
- Evaluate PFS in subjects with KRAS mutated NSCLC.

Stage 2

- Assess OS in subjects with stage IIIB or IV NSCLC treated with the combination of ganetespib and docetaxel compared to docetaxel alone. Stage 2 (the Phase 3 portion of the study) was never implemented as a part of this study. The Phase 3 study, Protocol 9090-14 was initiated instead.

Protection of trial subjects:

All Investigators obtained Independent Ethics Committee (IEC) or Institutional Review Board (IRB) approval for this protocol and written informed consent prior to study initiation in adherence with 21 Code of Federal Regulations (CFR) 50 and 21 CFR 56.

This trial was designed and monitored in accordance with Sponsor procedures, which comply with the ethical principles of Good Clinical Practice (GCP) as required by the major regulatory authorities, and in accordance with the Declaration of Helsinki.

Prior to the start of any protocol-specific evaluations or screening procedures, the Investigator (or designated staff) explained the nature of the study and its risks and benefits to the patient (or the patient's legal representative). Each patient received an informed consent document with patient information. Patients were to be given ample time to read the information and the opportunity to ask questions. Informed consent was required to be obtained from each patient prior to performing any protocol-specific evaluations. One copy of the signed informed consent document was given to the patient, and another was retained by the Investigator.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 June 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 20
Country: Number of subjects enrolled	Spain: 20
Country: Number of subjects enrolled	United Kingdom: 20

Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	Czech Republic: 6
Country: Number of subjects enrolled	Germany: 25
Country: Number of subjects enrolled	Bosnia and Herzegovina: 23
Country: Number of subjects enrolled	Croatia: 14
Country: Number of subjects enrolled	Romania: 25
Country: Number of subjects enrolled	Serbia: 107
Country: Number of subjects enrolled	Ukraine: 33
Country: Number of subjects enrolled	Canada: 16
Country: Number of subjects enrolled	United States: 40
Country: Number of subjects enrolled	Russian Federation: 33
Worldwide total number of subjects	385
EEA total number of subjects	133

Notes:

---

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	272
From 65 to 84 years	111
85 years and over	2

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 685 patients with advanced NSCLC of all histologies were screened and 385 such patients were randomized.

### Period 1

Period 1 title	Treatment Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Ganetespib + Docetaxel

Arm description:

On Day 1 of each 3-week treatment cycle, ganetespib (150 mg/m<sup>2</sup>) and docetaxel (75 mg/m<sup>2</sup>) were administered as separate 1-hour intravenous infusions. There was a 1-hour "rest" period following the end of the ganetespib infusion prior to docetaxel infusion. Ganetespib 150 mg/m<sup>2</sup> was administered again on Day 15 of each cycle.

Participating patients were to be treated until intolerability or disease progression.

Arm type	Experimental
Investigational medicinal product name	Ganetespib
Investigational medicinal product code	
Other name	STA-9090
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Ganetespib was infused over 60 minutes, approximately, at a dose of 150 mg/m<sup>2</sup> on Day 1 and Day 15 of each three week cycle. The amount of ganetespib to be administered was determined by calculating the patient's body surface area and was recalculated on Day 1 of each cycle during the course of the study.

Investigational medicinal product name	Docetaxel
Investigational medicinal product code	
Other name	Taxotere, Docecad
Pharmaceutical forms	Solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Docetaxel 75 mg/m<sup>2</sup> was administered on Day 1 of a 3-week treatment cycle by 1-hour intravenous infusion. The amount of docetaxel administered was determined by calculating the patient's body surface area and was recalculated on Day 1 of each cycle during the course of the study. Premedication for docetaxel followed the local institutional standard of care guidelines.

<b>Arm title</b>	Docetaxel
------------------	-----------

Arm description:

On Day 1 of each 3-week treatment cycle, docetaxel (75 mg/m<sup>2</sup>) was administered as a 1-hour intravenous infusion. Participating patients were treated until intolerability or disease progression.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Docetaxel
Investigational medicinal product code	
Other name	Taxotere, Docecad
Pharmaceutical forms	Solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Docetaxel 75 mg/m<sup>2</sup> was administered on Day 1 of a 3-week treatment cycle by 1-hour intravenous infusion. The amount of docetaxel administered was determined by calculating the patient's body surface area and was recalculated on Day 1 of each cycle during the course of the study. Premedication for docetaxel followed the local institutional standard of care guidelines.

<b>Number of subjects in period 1</b>	Ganetespib + Docetaxel	Docetaxel
Started	197	188
Patients treated ( $\geq 1$ dose)	195	186
Completed	0	0
Not completed	197	188
Adverse event, serious fatal	16	17
Clinical progression	23	17
Consent withdrawn by subject	11	14
Adverse event, non-fatal	17	15
Symptomatic deterioration	12	4
Objective disease progression (RECIST)	102	80
Sponsor decision	2	-
Treatment completed	5	35
not specified	9	6

## Baseline characteristics

### Reporting groups

Reporting group title	GanetespiB + Docetaxel
Reporting group description:	
On Day 1 of each 3-week treatment cycle, ganetespiB (150 mg/m <sup>2</sup> ) and docetaxel (75 mg/m <sup>2</sup> ) were administered as separate 1-hour intravenous infusions. There was a 1-hour "rest" period following the end of the ganetespiB infusion prior to docetaxel infusion. GanetespiB 150 mg/m <sup>2</sup> was administered again on Day 15 of each cycle.	
Participating patients were to be treated until intolerability or disease progression.	
Reporting group title	Docetaxel
Reporting group description:	
On Day 1 of each 3-week treatment cycle, docetaxel (75 mg/m <sup>2</sup> ) was administered as a 1-hour intravenous infusion. Participating patients were treated until intolerability or disease progression.	

Reporting group values	GanetespiB + Docetaxel	Docetaxel	Total
Number of subjects	197	188	385
Age categorical			
Units: Subjects

## End points

### End points reporting groups

Reporting group title	Ganetespib + Docetaxel
Reporting group description: On Day 1 of each 3-week treatment cycle, ganetespib (150 mg/m <sup>2</sup> ) and docetaxel (75 mg/m <sup>2</sup> ) were administered as separate 1-hour intravenous infusions. There was a 1-hour "rest" period following the end of the ganetespib infusion prior to docetaxel infusion. Ganetespib 150 mg/m <sup>2</sup> was administered again on Day 15 of each cycle. Participating patients were to be treated until intolerability or disease progression.	
Reporting group title	Docetaxel
Reporting group description: On Day 1 of each 3-week treatment cycle, docetaxel (75 mg/m <sup>2</sup> ) was administered as a 1-hour intravenous infusion. Participating patients were treated until intolerability or disease progression.	
Subject analysis set title	Ganetespib + Docetaxel: eLDH
Subject analysis set type	Sub-group analysis
Subject analysis set description: Includes subjects with baseline lactate dehydrogenase values above the normal range. On Day 1 of each 3-week treatment cycle, ganetespib (150 mg/m <sup>2</sup> ) and docetaxel (75 mg/m <sup>2</sup> ) were administered as separate 1-hour intravenous infusions. There was a 1-hour "rest" period following the end of the ganetespib infusion prior to docetaxel infusion. Ganetespib 150 mg/m <sup>2</sup> was administered again on Day 15 of each cycle. Participating patients were to be treated until intolerability or disease progression.	
Subject analysis set title	Docetaxel: eLDH
Subject analysis set type	Sub-group analysis
Subject analysis set description: Includes subjects with baseline lactate dehydrogenase values above the normal range. On Day 1 of each 3-week treatment cycle, docetaxel (75 mg/m <sup>2</sup> ) was administered as a 1-hour intravenous infusion. Participating patients were treated until intolerability or disease progression.	
Subject analysis set title	Ganetespib + Docetaxel: mKRAS
Subject analysis set type	Sub-group analysis
Subject analysis set description: Includes subjects with mutated KRAS (V-Ki-ras2, Kirsten rat sarcoma viral oncogene homolog). On Day 1 of each 3-week treatment cycle, ganetespib (150 mg/m <sup>2</sup> ) and docetaxel (75 mg/m <sup>2</sup> ) were administered as separate 1-hour intravenous infusions. There was a 1-hour "rest" period following the end of the ganetespib infusion prior to docetaxel infusion. Ganetespib 150 mg/m <sup>2</sup> was administered again on Day 15 of each cycle. Participating patients were to be treated until intolerability or disease progression.	
Subject analysis set title	Docetaxel: mKRAS
Subject analysis set type	Sub-group analysis
Subject analysis set description: Includes subjects with mutated KRAS (V-Ki-ras2, Kirsten rat sarcoma viral oncogene homolog). On Day 1 of each 3-week treatment cycle, docetaxel (75 mg/m <sup>2</sup> ) was administered as a 1-hour intravenous infusion. Participating patients were treated until intolerability or disease progression.	
Subject analysis set title	Ganetespib + Docetaxel: Adenocarcinoma
Subject analysis set type	Sub-group analysis
Subject analysis set description: Includes subjects with adenocarcinoma histology. On Day 1 of each 3-week treatment cycle, ganetespib (150 mg/m <sup>2</sup> ) and docetaxel (75 mg/m <sup>2</sup> ) were administered as separate 1-hour intravenous infusions. There was a 1-hour "rest" period following the end of the ganetespib infusion prior to docetaxel infusion. Ganetespib 150 mg/m <sup>2</sup> was administered again on Day 15 of each cycle. Participating patients were to be treated until intolerability or disease progression.	
Subject analysis set title	Docetaxel: Adenocarcinoma
Subject analysis set type	Sub-group analysis
Subject analysis set description: Includes subjects with adenocarcinoma histology.	

On Day 1 of each 3-week treatment cycle, docetaxel (75 mg/m<sup>2</sup>) was administered as a 1-hour intravenous infusion. Participating patients were treated until intolerability or disease progression.

### Primary: Kaplan-Meier Estimates for Progression Free Survival (PFS) in Adenocarcinoma Subjects with Elevated Baseline Serum Lactate Dehydrogenase (eLDH)

End point title	Kaplan-Meier Estimates for Progression Free Survival (PFS) in Adenocarcinoma Subjects with Elevated Baseline Serum Lactate Dehydrogenase (eLDH)
-----------------	---

#### End point description:

PFS was measured from the date of randomization until disease progression or death from any cause in the absence of disease progression. Disease progression (PD) was defined as at least a 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum of diameters on study. In addition to the relative increase of 20%, the sum must also demonstrate an absolute increase of at least 5 mm.

The range for normal total LDH was 97 – 236 U/L and elevated LDH was total LDH ≥237 U/L. Adenocarcinoma patients with eLDH enrolled after Amendment 3 contribute to this endpoint. This excludes the first 27 adenocarcinoma patients with eLDH whose data were used in an interim analysis that established this endpoint in Amendment 3. Results from the 30 April 2014 data set.

End point type	Primary
End point timeframe:	
Day 1 to 25 months	

End point values	Ganetespi + Docetaxel	Docetaxel		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	44 <sup>[1]</sup>	43 <sup>[2]</sup>		
Units: months				
median (confidence interval 90%)	2.8 (1.4 to 3.5)	2.7 (1.4 to 3.9)		

#### Notes:

[1] - Randomized adenocarcinoma eLDH patients enrolled after Protocol Amendment 3

[2] - Randomized adenocarcinoma eLDH patients enrolled after Protocol Amendment 3

### Statistical analyses

Statistical analysis title	PFS - adenocarcinoma eLDH population
Comparison groups	Ganetespi + Docetaxel v Docetaxel
Number of subjects included in analysis	87
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.5949 <sup>[3]</sup>
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	1.059
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.714
upper limit	1.571

Notes:

[3] - P-value was from a 1-sided stratified log rank test (strata: LDH, ECOG, smoking status, and interval between diagnosis of advanced disease and randomization)

### Primary: Kaplan-Meier Estimates for Progression Free Survival (PFS) in Subjects with mKRAS

End point title	Kaplan-Meier Estimates for Progression Free Survival (PFS) in Subjects with mKRAS
-----------------	---

End point description:

PFS was measured from the date of randomization until disease progression or death from any cause in the absence of disease progression. Disease progression (PD) was defined as at least a 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum of diameters on study. In addition to the relative increase of 20%, the sum must also demonstrate an absolute increase of at least 5 mm.

Mutations in the oncogene KRAS occur in approximately 20% of NSCLC tumors and therefore represent one of the largest molecularly profiled subsets of NSCLC patients.

Results from the 30 April 2014 data set.

End point type	Primary

## Statistical analyses

Statistical analysis title	PFS - adenocarcinoma population
Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.1117 <sup>[9]</sup>
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.846
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.672
upper limit	1.065

Notes:

[9] - Strata: ECOG PS (0 vs 1), screening total LDH levels (normal vs. elevated), smoking status (never smoked, current smoker, past smoker), and interval since initial diagnosis of advanced disease (≤6 vs. >6 months).

Statistical analysis title	PFS - adenocarcinoma population: Sex
----------------------------	--------------------------------------

Statistical analysis description:

Factor: Sex

Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.

Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[10]</sup>
P-value	= 0.7892 <sup>[11]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	1.419
Confidence interval	
level	90 %
sides	2-sided
lower limit	1.122
upper limit	1.794

Notes:

[10] - Effect of the prognostic factor of sex (male vs female) on PFS.

[11] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

<b>Statistical analysis title</b>	PFS - adenocarcinoma population: Smoking Status
-----------------------------------	---

Statistical analysis description:

Factor: Smoking status

Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.

Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[12]</sup>
P-value	= 0.4588 <sup>[13]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.605
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.459
upper limit	0.796

Notes:

[12] - Effect of the prognostic factor of smoking status (never vs. ever) on PFS.

[13] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

<b>Statistical analysis title</b>	PFS - adenocarcinoma population: Baseline LDH
-----------------------------------	---

Statistical analysis description:

Factor: Baseline LDH

Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.

Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[14]</sup>
P-value	= 0.8009 <sup>[15]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	1.738

Confidence interval	
level	90 %
sides	2-sided
lower limit	1.352
upper limit	2.233

Notes:

[14] - Effect of the prognostic factor of baseline LDH (elevated vs. normal) on PFS.

[15] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

<b>Statistical analysis title</b>	PFS - adenocarcinoma population: ECOG at entry
-----------------------------------	--

Statistical analysis description:

Factor: ECOG at entry

Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.

Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[16]</sup>
P-value	= 0.4755 <sup>[17]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	1.446

Confidence interval

level	90 %
sides	2-sided
lower limit	1.142
upper limit	1.832

Notes:

[16] - Effect of the prognostic factor of ECOG at entry ( $\geq 1$  vs. 0) on PFS.

[17] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

<b>Statistical analysis title</b>	PFS - adenocarcinoma population: time since NSCLC
-----------------------------------	---

Statistical analysis description:

Factor: Interval since advanced NSCLC diagnosis

Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.

Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[18]</sup>
P-value	= 0.1877 <sup>[19]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.781

Confidence interval

level	90 %
sides	2-sided
lower limit	0.608
upper limit	1.002

Notes:

[18] - Effect of the prognostic factor of Interval since advanced NSCLC diagnosis ( $>6$  vs.  $\leq 6$  months) on PFS.

[19] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

<b>Statistical analysis title</b>	PFS - adenocarcinoma population: age
Statistical analysis description:	
Factor: age	
Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.	
Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[20]</sup>
P-value	= 0.6136 <sup>[21]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.993
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.979
upper limit	1.006

Notes:

[20] - Effect of the prognostic factor of age (years) on PFS.

[21] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

<b>Statistical analysis title</b>	PFS - adenocarcinoma population: tumor size
Statistical analysis description:	
Factor: total baseline target lesions tumor size	
Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.	
Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[22]</sup>
P-value	= 0.4499 <sup>[23]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	1.005
Confidence interval	
level	90 %
sides	2-sided
lower limit	1.003
upper limit	1.007

Notes:

[22] - Effect of the prognostic factor of total baseline target lesions tumor size (mm) on PFS.

[23] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

<b>Statistical analysis title</b>	PFS - adenocarcinoma population: region
Statistical analysis description:	
Factor: region	
Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.	

Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[24]</sup>
P-value	= 0.0459 <sup>[25]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.765
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.6
upper limit	0.976

Notes:

[24] - Effect of the prognostic factor of region (EEU vs. other) on PFS. EEU refers to Bosnia-Herzegovina, Croatia, Czech Republic, Poland, Romania, Russia, Serbia, and Ukraine. "Other" refers to all other countries.

[25] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

## Secondary: Kaplan-Meier Estimates for Overall Survival (OS) in Adenocarcinoma Subjects

End point title	Kaplan-Meier Estimates for Overall Survival (OS) in Adenocarcinoma Subjects
-----------------	---

End point description:

Overall survival was defined as the time from randomization until death due to any cause. Subjects who were lost for follow-up were censored at the time of the last contact.

Statistical analyses include the effect of individual prognostic factors on PFS; sex, smoking status, baseline LDH, ECOG upon entry, interval since advanced NSCLC diagnosis, age, total baseline target lesions tumor size, and region.

Results from the 30 April 2014 data set.

End point type	Secondary

## Statistical analyses

Statistical analysis title	OS - adenocarcinoma population
Comparison groups	Ganetespib + Docetaxel v Docetaxel

Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.1502 <sup>[28]</sup>
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.866
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.682
upper limit	1.1

Notes:

[28] - P-value was from a 1-sided stratified log rank test (strata: LDH, ECOG, smoking status, and interval between diagnosis of advanced disease and randomization)

<b>Statistical analysis title</b>	OS - adenocarcinoma population: Sex
-----------------------------------	-------------------------------------

Statistical analysis description:

Factor: Sex

Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.

Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[29]</sup>
P-value	= 0.695 <sup>[30]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	1.608
Confidence interval	
level	90 %
sides	2-sided
lower limit	1.256
upper limit	2.057

Notes:

[29] - Effect of the prognostic factor of sex (male vs female) on OS.

[30] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

<b>Statistical analysis title</b>	OS - adenocarcinoma population: Smoking Status
-----------------------------------	--

Statistical analysis description:

Factor: Smoking status

Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.

Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[31]</sup>
P-value	= 0.0571 <sup>[32]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.546

Confidence interval	
level	90 %
sides	2-sided
lower limit	0.404
upper limit	0.737

Notes:

[31] - Effect of the prognostic factor of smoking status (never vs. ever) on OS.

[32] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

<b>Statistical analysis title</b>	OS - adenocarcinoma population: Baseline LDH
-----------------------------------	--

Statistical analysis description:

Factor: baseline LDH

Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.

Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[33]</sup>
P-value	= 0.1384 <sup>[34]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	2.215

Confidence interval

level	90 %
sides	2-sided
lower limit	1.72
upper limit	2.852

Notes:

[33] - Effect of the prognostic factor of baseline LDH (elevated vs. normal) on OS.

[34] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

<b>Statistical analysis title</b>	OS - adenocarcinoma population: ECOG on Entry
-----------------------------------	---

Statistical analysis description:

Factor: ECOG on entry

Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.

Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[35]</sup>
P-value	= 0.9239 <sup>[36]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	1.71

Confidence interval

level	90 %
sides	2-sided
lower limit	1.334
upper limit	2.191

Notes:

[35] - Effect of the prognostic factor of ECOG score on entry ( $\geq 1$  vs. 0) on OS.

[36] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

Statistical analysis title	OS - adenocarcinoma population: Time since NSCLC
Statistical analysis description:	
Factor: Interval since advanced NSCLC diagnosis	
Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.	
Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[37]</sup>
P-value	= 0.0367 <sup>[38]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.873
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.672
upper limit	1.134

Notes:

[37] - Effect of the prognostic factor of Interval since advanced NSCLC diagnosis (>6 vs. ≤6 months) on OS.

[38] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

Statistical analysis title	OS - adenocarcinoma population: Age
Statistical analysis description:	
Factor: Age	
Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.	
Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[39]</sup>
P-value	= 0.6108 <sup>[40]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	1.009
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.995
upper limit	1.023

Notes:

[39] - Effect of the prognostic factor of age (years) on OS.

[40] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

Statistical analysis title	OS - adenocarcinoma population: Tumor Size
Statistical analysis description:	
Factor: total baseline target lesions tumor size	
Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that	

factor as a covariate.

Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[41]</sup>
P-value	= 0.7323 <sup>[42]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	1.007
Confidence interval	
level	90 %
sides	2-sided
lower limit	1.004
upper limit	1.009

Notes:

[41] - Effect of the prognostic factor of total baseline target lesions tumor size (mm) on OS.

[42] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

<b>Statistical analysis title</b>	OS - adenocarcinoma population: Region
-----------------------------------	--

Statistical analysis description:

Factor: region

Hazard ratio, 90% CI, and p-values for each factor were obtained from Cox PH model including only that factor as a covariate.

Comparison groups	Ganetespib + Docetaxel v Docetaxel
Number of subjects included in analysis	253
Analysis specification	Pre-specified
Analysis type	other <sup>[43]</sup>
P-value	= 0.0902 <sup>[44]</sup>
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.884
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.688
upper limit	1.136

Notes:

[43] - Effect of the prognostic factor of region (EEU vs. other) on OS. EEU refers to Bosnia-Herzegovina, Croatia, Czech Republic, Poland, Romania, Russia, Serbia, and Ukraine. "Other" refers to all other countries.

[44] - p-value for the interaction term is from the Cox model containing only the predictor of interest, treatment, and their interaction.

## Secondary: Kaplan-Meier Estimates for Overall Survival (OS) by Subpopulation

End point title	Kaplan-Meier Estimates for Overall Survival (OS) by Subpopulation
-----------------	---

End point description:

Overall survival was defined as the time from randomization until death due to any cause. Subjects who were lost for follow-up were censored at the time of the last contact.

Results from the 30 April 2014 data set.

End point type	Secondary
----------------	-----------

End point timeframe:

Day 1 up to 25 months

## Secondary: Tumor Response by Subpopulation

End point title	Tumor Response by Subpopulation
End point description:	
Tumor response rate was measured two ways using modified RECIST 1.1:	
1) Objective Response Rate (ORR) which is the sum of subjects whose best response was a complete response or a partial response.	
2) Disease Control Rate (DCR) at $\geq 18$ weeks. DCR is the sum of subjects whose best response of a complete or partial response or stable disease lasted for $\geq 18$ weeks.	
A complete response was the disappearance (or normalization) of all target lesions. A partial response was at least 30% decrease in the sum of diameters of target lesions taking as reference the baseline sum of diameters. Stable disease was neither sufficient shrinkage to qualify for partial response nor sufficient increase to qualify for progressive disease.	
Results from the 30 April 2014 data set.	
End point type	Secondary
End point timeframe:	
Day 1 up to 12 months

## Secondary: Change in Quality of Life from Baseline to End of Treatment Based on

End point title	Change in Quality of Life from Baseline to End of Treatment Based on
-----------------	--

End point description:

The European Organization for the Research and Treatment of Cancer Quality of Life Questionnaire Core 30 (EORTC QLQ-C30) is a questionnaire that includes the following sub-scales:

- global health status,
- functional scales (physical functioning, role functioning, emotional functioning, cognitive functioning, and social activity), and
- symptom scales (fatigue, nausea and vomiting, and pain) and symptom single items (dyspnoea, insomnia, appetite loss, constipation, diarrhoea and financial difficulties).

Scores are averaged for each scale and transformed to 0-100 scale; higher score indicates better quality of life on global health status and functional scales and worse quality of life on symptom scales and financial difficulty scale.

Results from the 30 April 2014 data set.

End point type	Secondary

## Statistical analyses

No statistical analyses for this end point

## Secondary: Participants with Treatment-Emergent Adverse Events (AEs)

End point title	Participants with Treatment-Emergent Adverse Events (AEs)
-----------------	---

End point description:

At each summarization level, a patient is counted once if the patient reported one or more events.

National Cancer Institute (NCI) Common Terminology Criteria (NCI-CTCAE V4) is a scale of the severity of the AE. CTCAE grade 3 is severe (the AE is intolerable and disrupts normal daily activities, may require additional therapy or hospitalization, and/or discontinuation of the study drug), and grade 4 is life threatening (the AE exposes the subject to risk of death at the time of the event; it does not refer to an event that may have caused death if the event was more severe).

Results from the 02 December 2015 dataset.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Day 1 up to 25 months

Adverse event reporting additional description:

Results from the 1 December 2015 data set.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	16.1
--------------------	------

### Reporting groups

Reporting group title	Docetaxel
-----------------------	-----------

Reporting group description:

On Day 1 of each 3-week treatment cycle, docetaxel (75 mg/m<sup>2</sup>) was administered as a 1-hour intravenous infusion. Participating patients were treated until intolerability or disease progression.

Reporting group title	Ganetespib + Docetaxel
-----------------------	------------------------

Reporting group description:

On Day 1 of each 3-week treatment cycle, ganetespib (150 mg/m<sup>2</sup>) and docetaxel (75 mg/m<sup>2</sup>) were administered as separate 1-hour intravenous infusions. There was a 1-hour "rest" period following the end of the ganetespib infusion prior to docetaxel infusion. Ganetespib 150 mg/m<sup>2</sup> was administered again on Day 15 of each cycle.

Participating patients were to be treated until intolerability or disease progression.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 October 2011	<ul style="list-style-type: none"><li>- Changed a co-primary objective to the following: "Evaluate PFS in patients with KRAS mutated NSCLC." Co-primary endpoint - changed to PFS in the mKRAS pop.</li><li>- Disease control rate (DCR) replaced clinical benefit rate (CBR) in the associated secondary objectives</li><li>- Changed interval since diagnosis of advanced disease changed from "<math>\leq 12</math> vs. <math>&gt; 12</math> mo to <math>\leq 6</math> vs. <math>&gt; 6</math> mo (prospective stratification factor)</li></ul>
05 March 2012	Administrative changes. No changes to primary or secondary endpoints.
14 May 2012	<ul style="list-style-type: none"><li>- Restricted study enrollment to patients with adenocarcinoma NSCLC; stopped enrollment of non-adenocarcinoma patients. Nonadenocarcinoma patients already on-study were to discontinue treatment with ganetespib. Investigators could continue treatment of these patients with docetaxel alone, per standard of care.</li><li>- Limited analysis of primary and secondary endpoints to patients with adenocarcinoma NSCLC.</li><li>- Increased overall sample size from 240 to 300 patients</li><li>- Changed co-primary endpoint to PFS in patients with eLDH</li><li>- Added a secondary objective for mKRAS: "Compare the 2 treatments in patients with mutated KRAS (mKRAS) with respect to the following: ORR, DCR, tumor size change, 1-year OS rate, OS"</li></ul>
24 August 2012	<ul style="list-style-type: none"><li>- Increased overall sample size to 340 adenocarcinoma patients</li><li>- Remove cap on patients with normal LDH</li></ul>
19 August 2013	End of study after Stage 1 was formalized in this Amendment. Included the additional potential risk of intestinal perforation with ganetespib.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study was terminated after stage 1. Stage 2 (the Phase 3 portion of the study) was never implemented as a part of this study. The Phase 3 study, Protocol 9090-14 was initiated instead.

Notes:
