

Clinical trial results:

A Phase III, randomized, double-blind trial to evaluate the efficacy, safety and tolerability of TMC435 vs. telaprevir, both in combination with PegIFN-2a and ribavirin, in chronic hepatitis C genotype-1 infected subjects who were null or partial responders to prior PegIFN and ribavirin therapy

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No	No

1901/2006 apply to this trial?	
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 April 2014
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	28 April 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to demonstrate the efficacy of TMC435 in combination with peginterferon (PegIFN) + ribavirin (RBV) by means of establishing its non- inferiority compared to an approved regimen of telaprevir + PegIFN + RBV in participants with chronic hepatitis C who have previously failed PegIFN.

Protection of trial subjects:

Table of AEs, incidence of AEs (regardless of severity or relation to study drugs), AEs of at least Grade 3 (regardless of relation to study drugs), and incidence of treatment-emergent graded laboratory abnormalities of interest over time will be reported.

Background therapy:

PegIFN + RBV

Evidence for comparator:

Telaprevir

Actual start date of recruitment	19 January 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	730
From 65 to 84 years	33
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

771 participants were randomly assigned into two treatment groups, but only 763 of them received the study drug.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Telaprevir+Placebo+Peginterferon Alfa-2a+Ribavirin

Arm description:

2 Telaprevir (TVR) tablets, orally, 3 times a day along with TMC435 matched placebo capsule once daily for 12 weeks, in addition to peginterferon alfa-2a and ribavirin for 48 weeks.

Arm type	Experimental
Investigational medicinal product name	telaprevir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

2 Telaprevir (TVR) tablets, orally, 3 times a day along with 150 mg TMC435 matched placebo capsule once daily for 12 weeks, in addition to peginterferon alfa-2a and ribavirin for 48 weeks.

Arm title	Simeprevir+Placebo+Peginterferon Alfa-2a+Ribavirin
------------------	--

Arm description:

Simeprevir (TMC435) capsule, orally, once daily for 12 weeks, along with 2 telaprevir (TVR) matched placebo tablets 3 times a day for 12 weeks, and peginterferon alfa-2a and ribavirin for 48 weeks.

Arm type	Experimental
Investigational medicinal product name	simeprevir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Simeprevir (TMC435) 150 milligram (mg) capsule, orally, once daily for 12 weeks, along with 2 telaprevir (TVR) matched placebo tablets 3 times a day for 12 weeks, and peginterferon alfa-2a and ribavirin for 48 weeks.

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants With Viral Relapse

End point title	Percentage of Participants With Viral Relapse
End point description:	Participants are considered to have a viral relapse if both conditions as specified are met: 1) <25 IU/mL undetectable HCV RNA at the actual end of study drug treatment; 2) confirmed HCV RNA greater than or equal to (>=) 25 IU/mL during follow-up. 'N' (number of participants analyzed) signifies those participants who were evaluable for this measure. The incidence of viral relapse is only calculated for subjects with undetectable HCV RNA levels (or

unconfirmed detectable) at EOT and with at least one follow-up HCV RNA measurement.'

End point type	Secondary
End point timeframe:	
End of Treatment (Week 48) up to Follow-up Period (until Week 72)	

End point values	Simeprevir+Placebo+Peginterferon Alfa-2a+Ribavirin	Telaprevir+Placebo+Peginterferon Alfa-2a+Ribavirin

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 November 2011	The first amendment included change of primary efficacy endpoint SVR24 for ongoing and future SMV Phase 3 trials, to SVR12. Evaluation and updating the sustained virologic response definition and specific toxicities section. Additional tests for the urine dipstick analysis were listed. Upper age limit of 70 years for all participants was added, exclusion criteria 10 was revised. It was clarified that a liver biopsy was the required method for all subjects without a contraindication for this procedure. Clarifications were made to the disallowed concomitant medication section by adjusting the wording. Female subjects of male participants did not have to perform a pregnancy test. In the initial Clinical Trial Protocol HPC3001, it was previously required that female partners performed pregnancy tests regularly. An additional Skindex-16 questionnaire was added at the first unscheduled visit for rash management for subjects who presented with any rash. Comparison of treatments on severity and impact of rash in subjects who experienced rash was a secondary objective instead of an exploratory objective.
25 May 2012	In the second amendment CTPA-GEN-II, criterion related to the liver biopsy requirement (inclusion criterion 2) was updated and provided clarification about when and which alternative non-invasive methods were to be used. The definition of viral breakthrough and the on-treatment failure definition were clarified. Removal of erythropoiesis-stimulating agents from the list of disallowed medications to treat treatment-emergent anemia. Reduction in HCV RNA from baseline of <2 log ₁₀ IU/mL assessed after Week 12 until Week 24 was considered adequate for the identification of subjects with prior null response. The eligibility cut-off for alpha-fetoprotein (AFP) was increased from 50 to 100 ng/mL. A CT or MRI examination was mandatory for inclusion of cirrhotics with elevated AFP levels. Clarifications in the Pre study and Concomitant Therapy section, the Safety Evaluation section and the Study Medication Withdrawal section. Revision of the overall sampling schedule for pharmacokinetics evaluations following analysis of recent Phase 2 trials. Further recommendations were added related to female partners of male subjects who do not have to perform a pregnancy test because of privacy protection regulations. The Roche Cobas TaqMan HCV Test v2.0, for use with the High Pure System was used as the assay to determine HCV RNA levels. On request of Health Authorities, the key performance characteristics were added and the assay performance and validation documents were added to the reference list. The statistical methods were updated based on Health Authorities feedback regarding the primary endpoint, resulting in an update of the secondary endpoints. In addition, PROs were updated.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
