Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 April 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 January 2016
Global end of trial reached?	Yes
Global end of trial date	18 January 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary safety objective of this study was to evaluate the safety and tolerability of CCX168 in subjects with anti-neutrophil cytoplasmic antibody (ANCA)-associated vasculitis (AAV) on background cyclophosphamide or rituximab treatment.

The primary efficacy objective was to evaluate the efficacy of CCX168 based on the Birmingham Vasculitis Activity Score (BVAS) version 3.

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki and with all applicable laws and regulations of the locale and country where the study was conducted, and in compliance with Good Clinical Practice Guidelines. Only subjects that met all the study inclusion and none of the exclusion criteria were entered in the study. The rationale of the study, procedural details, and investigational goals were explained to each subject, along with potential risks and benefits. Each subject was assured of his/her right to withdraw from the study at any time. An external data monitoring committee (DMC) reviewed safety data, including rescue glucocorticoid use over the course of the study, and advised the Sponsor regarding progression from each step to the next in the study.

Background therapy:

Standard therapy for AAV includes cyclophosphamide or rituximab and oral glucocorticoids, tapered over a period of time. IV Cyclophosphamide was used throughout the study as background treatment. Subjects with prior rituximab treatment received rituximab throughout.

Evidence for comparator: -

Actual start date of recruitment	27 September 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	3 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	Poland: 2
Country: Number of subjects enrolled	Sweden: 11
Country: Number of subjects enrolled	United Kingdom: 14
Country: Number of subjects enrolled	Austria: 2
Country: Number of subjects enrolled	Belgium: 9
Country: Number of subjects enrolled	Czech Republic: 5
Country: Number of subjects enrolled	France: 4
Country: Number of subjects enrolled	Germany: 13
Country: Number of subjects enrolled	Hungary: 3

Worldwide total number of subjects	67
EEA total number of subjects	67

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	44
From 65 to 84 years	23
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The Screening period must not have exceeded 14 days prior to Study Day 1 (the first day of dosing).

Period 1

Period 1 title	Period 1 (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo BID Plus 60 mg Prednisone
------------------	-----------------------------------

Arm description:

Placebo plus a full dose of oral glucocorticoids

Arm type	Placebo
Investigational medicinal product name	CCX168 Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Three placebo capsules in the morning and three placebo capsules in the evening.

Duration: Daily for 84 consecutive days.

Investigational medicinal product name	Prednisone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Prednisone dosage equivalent to 60 mg orally per day if body weight \geq 55 kg, or equivalent to 45 mg orally per day if body weight <55 kg.

Duration: Starting Day 1 with a tapered dose per protocol-specified schedule.

Arm title	CCX168 30 mg BID Plus 20 mg Prednisone
------------------	--

Arm description:

30 mg CCX168, plus two-thirds reduced dose of oral glucocorticoids.

Arm type	Experimental
Investigational medicinal product name	Prednisone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Prednisone dosage: 20 mg orally per day if body weight >55 kg, or 15 mg orally per day if body weight

<55 kg

Duration: Starting Day 1 with a tapered dose per protocol-specified schedule.

Investigational medicinal product name	CCX168
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Three 10 mg CCX168 capsules in the morning and three 10 mg capsules in the evening, approximately 12 hours following the morning dose.

Duration: Daily for 84 consecutive days.

Investigational medicinal product name	Prednisone-matching placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Dosage: equivalent to 40 mg orally per day if body weight > 55kg or equivalent to 30 mg orally per day if body weight <55 kg.

Duration: Starting Day 1 with a tapered dose per protocol-specified schedule.

Arm title	CCX168 30 mg BID Without Prednisone
------------------	-------------------------------------

Arm description:

30 mg of CCX168

Arm type	Experimental
Investigational medicinal product name	CCX168
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Three 10 mg CCX168 capsules in the morning and three 10 mg capsules in the evening, approximately 12 hours following the morning dose.

Duration: Daily for 84 consecutive days.

Investigational medicinal product name	Prednisone-matching placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Equivalent to 60 mg orally per day if body weight >55 kg, or equivalent to 45 mg orally per day if body weight <55 kg.

Duration: Starting Day 1 with a tapered dose per protocol-specified schedule.

Number of subjects in period 1	Placebo BID Plus 60 mg Prednisone	CCX168 30 mg BID Plus 20 mg Prednisone	CCX168 30 mg BID Without Prednisone
Started	23	22	22
Completed	18	19	18
Not completed	5	3	4
Consent withdrawn by subject	3	-	1

End point title	Percent Change From Baseline to Day 85 in BVAS
End point description: Percent change in Birmingham Vasculitis Index Score (BVAS) at week 12, higher percentage change indicates worse outcome	
BVAS = Birmingham Vasculitis Activity Score	
The BVAS form is divided into 9 organ-based systems, with each section including symptoms/signs that are typical of that particular organ involvement in systemic vasculitis. The clinician only scores features believed to be due to active vasculitis. Completion of the form provides a numerical score, which ranges from 0 (best health) to 63 (worst health). A negative percentage change indicated improvement in health.

Secondary: Change From Baseline to Day 85 in Health-related Quality of Life as Measured by the EQ-5D-5L

End point title	Change From Baseline to Day 85 in Health-related Quality of Life as Measured by the EQ-5D-5L
-----------------	--

End point description:

EQ-5D-5L: EuroQuality of Life-5 Domains-5 Levels. The EQ-5D-5L consists of 2 pages: the EQ-5D descriptive system and the EQ visual analogue scale (EQ VAS). The descriptive system comprises five dimensions: mobility, self-care, usual activities, pain/discomfort and anxiety/depression. Each dimension has 5 levels: no problems, slight problems, moderate problems, severe problems and extreme problems. The answers given can be converted into an Index Score ranging from 0 for death to 1 for perfect health. The EQ-5D questionnaire also includes a Visual Analog Scale (VAS), by which respondents can report their perceived health status with a grade ranging from 0 (the worst imaginable health) to 100 (the best imaginable health).

Number of subjects with data at baseline and the specified visit are specified.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 April 2012	<p>Changes made to the protocol included the following:</p> <ul style="list-style-type: none">- Laboratory results from the local laboratories obtained within 72 hours of Screening were acceptable in order to avoid unnecessary blood draws- A number of inclusion and exclusion criteria were clarified based on questions from the Investigators- Subjects were permitted to take immunosuppressive treatment, including azathioprine, mycophenolate mofetil, or methotrexate during the 84-day follow-up period, but not during the 84-day treatment period (the rationale was that it was consistent with standard practice at certain study centers)- Data from subjects receiving placebo in all 3 steps could have been combined, irrespective of the study step- A statement was included regarding subject care at the end of the study- A statement was included regarding review of substantial protocol Amendments by the Competent Authorities according to European Directive (CT-1)(2010/C 82/01)- A statement was included regarding archival of clinical study related documents for a period of 10 years according to European Union regulations (LVFS 2003:3)- A statement was included regarding implementation of the study according to Good Clinical Practice as per CPMP/ICH/135/95.
14 March 2013	<p>The main changes that Amendment 2.0 made to the protocol included the following:</p> <ul style="list-style-type: none">- The inclusion criteria for the protocol were amended to change the upper age limit from 75 years to 80 years, and the lower limit of eGFR from 30 mL/min/1.73 m² to 25 mL/min/1.73 m²;- Wording was added to indicate that oral glucocorticoid rescue treatment could be used instead of IV glucocorticoid rescue treatment at the discretion of the Investigator- Wording was added to indicate that data from Steps 1 and 2 could be combined depending on the study course- The study period was changed from 18 months to 30 months to reflect the study duration estimation at the time

30 May 2014	<ul style="list-style-type: none"> -Protocol modified to show that subjects with AAV with or without renal disease were eligible for the study; rituximab allowed instead of cyclophosphamide as background treatment -Study period changed to 60 months -Clinical study objectives revised to indicate the primary efficacy objective and priority order of secondary objectives -Step 3 of the study modified to include the Step 1 CCX168 group in addition to the Step 2 CCX168 group and the standard of care control group -Stratification for MPO and PR3 ANCA and cyclophosphamide or rituximab background treatment were added -Treatment during 84-day follow-up period standardized so that all subjects in the cyclophosphamide stratum received oral azathioprine, starting on Day 99 continuing through Day 168, and all subjects in the rituximab stratum did not receive any additional treatment during the 84-day follow-up period -SF-36 v2 and EQ-5D-5L added to measure changes in health related QoL -Inclusion and exclusion criteria modified to update disease nomenclature (eosinophilic granulomatosis with polyangiitis [Churg Strauss] and IgA vasculitis [Henoch-Schönlein purpura], to be consistent with inclusion of subjects with non-renal AAV, to include elderly subjects, subjects with eGFR ≥ 20 mL/min/1.73 m², hemoglobin ≥ 9 g/dL, liver enzymes not more than 3 x upper limit of normal, to allow up to 3000 mg of IV methylprednisolone prior to Screening, to exclude subjects who had received belimumab or tocilizumab within 12 weeks prior to Screening and subjects with a low lymphocyte count -Plasma sample collection for PD marker and saliva sample for polymorphism assessments added -Safety endpoint added to more precisely evaluate adverse events potentially associated with glucocorticoid use -Efficacy endpoints and statistical analysis methodology sections updated -Sample size estimation section revised -Trough plasma concentration added as a PK parameter -Potential measurements of rituximab plasma added
18 September 2015	<p>Changes made to the protocol included the following:</p> <ul style="list-style-type: none"> - The statistical methodology section was revised to indicate that the difference in proportions of subjects achieving the categorical endpoints were to be used instead of the odds ratio; an MMRM analysis for continuous variables was added - The study schema was corrected to indicate that the Step 3 enrollment target was 36 subjects, not 180 - Wording was revised to consolidate previous country-specific Amendments - Wording was added regarding stopping criteria for CCX168/placebo dosing of the protocol regarding WBC and neutrophil counts: If a subject developed Grade 2 or worse leukopenia or an ANC $< 1 \times 10^9/L$, dosing with CCX168 or placebo was to be ceased in such a subject. Study medication might be resumed only if WBC and absolute neutrophil count both exceeded the lower limit of the respective normal range, the Investigator deemed resumption to be appropriate, and the WBC and ANC were monitored closely thereafter. This recommendation was based on findings of leukopenia/neutropenia in 2 cases in another study in subjects with AAV (study CL003_168).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

This study is relatively small and the treatment duration was short.

Notes:
