

Clinical trial results:

A Phase 1/2 Study of Brentuximab Vedotin (SGN-35) in Pediatric Patients With Relapsed or Refractory Systemic Anaplastic Large-Cell Lymphoma or Hodgkin Lymphoma.

Summary

EudraCT number	2011-001240-29
Trial protocol	DE GB NL IT ES
Global end of trial date	12 April 2018

Results information

Result version number	v1 (current)
This version publication date	27 October 2018
First version publication date	27 October 2018

Trial information

Trial identification

Sponsor protocol code	C25002
-----------------------	--------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01492088
WHO universal trial number (UTN)	U1111-1158-2613
Other trial identifiers	RNEC: 133300410A0384, CCMO: NL38209.078.11

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000980-PIP01-10
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 April 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	12 April 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the trial is to assess the safety and pharmacokinetics, and determine the pediatric maximum tolerated dose and/or or recommended phase 2 dose of brentuximab vedotin.

Protection of trial subjects:

All study participants or their guardians were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 April 2012
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Regulatory reason
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 4
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	Germany: 5
Country: Number of subjects enrolled	Netherlands: 3
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	Italy: 14
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	Mexico: 1
Worldwide total number of subjects	36
EEA total number of subjects	31

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	12
Adolescents (12-17 years)	24
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants took part in the study at 12 investigative sites in United States, France, Germany, Netherlands, United Kingdom, Italy, Spain and Mexico from 16-April-2012 to 12-April-2018.

Pre-assignment

Screening details:

Participants with diagnosis of relapsed or refractory (r/r) sALCL/HL were enrolled to receive brentuximab vedotin 1.4-1.8 mg/kg, intravenous infusion on Day 1 of every 21-day cycle for up to 16 cycles. Treatment beyond 16 cycles was permitted at joint discretion of sponsor and investigator for participants experiencing continued clinical benefit.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Brentuximab vedotin 1.4 mg/kg: Phase 1

Arm description:

Brentuximab vedotin 1.4 mg/kg, 30-minute IV infusion, Day 1 of every 21-day cycle, until there was evidence of disease progression or unacceptable toxicity.

Arm type	Experimental
Investigational medicinal product name	Brentuximab vedotin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion, Powder for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Brentuximab vedotin Intravenous Infusion

Arm title	Brentuximab vedotin 1.8 mg/kg: Phase 1 and 2 r/r HL only
------------------	--

Arm description:

Participants with r/r HL received brentuximab vedotin 1.8 mg/kg, 30-minute IV infusion, Day 1 of every 21-day cycle until there was evidence of disease progression or unacceptable toxicity (Up to 16 cycles). Treatment with brentuximab vedotin beyond 16 cycles was permitted at the joint discretion of the sponsor and the investigator for those participants experiencing continued clinical benefit.

Arm type	Experimental
Investigational medicinal product name	Brentuximab vedotin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection/infusion, Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Brentuximab vedotin Intravenous Infusion

Arm title	Brentuximab vedotin 1.8 mg/kg: Phase 1 and 2 r/r sALCL only
------------------	---

Arm description:

Participants with r/r systemic anaplastic large-cell lymphoma (sALCL) received brentuximab vedotin 1.8 mg/kg, 30-minute IV infusion, Day 1 of every 21-day cycle until there was evidence of disease progression or unacceptable toxicity (Up to 16 cycles). Treatment with brentuximab vedotin beyond 16

cycles was permitted at the joint discretion of the sponsor and the investigator for those participants experiencing continued clinical benefit.

Arm type	Experimental
Investigational medicinal product name	Brentuximab vedotin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection/infusion, Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Brentuximab vedotin Intravenous Infusion

Number of subjects in period 1	Brentuximab vedotin 1.4 mg/kg: Phase 1	Brentuximab vedotin 1.8 mg/kg: Phase 1 and 2 r/r HL only	Brentuximab vedotin 1.8 mg/kg: Phase 1 and 2 r/r sALCL only
Started	3	16	17
Completed	0	2	3

End points

End points reporting groups

Reporting group title	Brentuximab vedotin 1.4 mg/kg: Phase 1
Reporting group description: Brentuximab vedotin 1.4 mg/kg, 30-minute IV infusion, Day 1 of every 21-day cycle, until there was evidence of disease progression or unacceptable toxicity.	
Reporting group title	Brentuximab vedotin 1.8 mg/kg: Phase 1 and 2 r/r HL only
Reporting group description: Participants with r/r HL received brentuximab vedotin 1.8 mg/kg, 30-minute IV infusion, Day 1 of every 21-day cycle until there was evidence of disease progression or unacceptable toxicity (Up to 16 cycles). Treatment with brentuximab vedotin beyond 16 cycles was permitted at the joint discretion of the sponsor and the investigator for those participants experiencing continued clinical benefit.	
Reporting group title	Brentuximab vedotin 1.8 mg/kg: Phase 1 and 2 r/r sALCL only
Reporting group description: Participants with r/r systemic anaplastic large-cell lymphoma (sALCL) received brentuximab vedotin 1.8 mg/kg, 30-minute IV infusion, Day 1 of every 21-day cycle until there was evidence of disease progression or unacceptable toxicity (Up to 16 cycles). Treatment with brentuximab vedotin beyond 16 cycles was permitted at the joint discretion of the sponsor and the investigator for those participants experiencing continued clinical benefit.	
Subject analysis set title	Brentuximab vedotin 1.8 mg/kg: Phase 1
Subject analysis set type	Sub-group analysis
Subject analysis set description: Brentuximab vedotin 1.8 mg/kg, 30-minute IV infusion, Day 1 of every 21-day cycle until there was evidence of disease progression or unacceptable toxicity (Up to 16 cycles). Treatment with brentuximab vedotin beyond 16 cycles was permitted at the joint discretion of the sponsor and the investigator for those participants experiencing continued clinical benefit.	
Subject analysis set title	Brentuximab vedotin 1.8 mg/kg: Phase 1
Subject analysis set type	Sub-group analysis
Subject analysis set description: Brentuximab vedotin 1.8 mg/kg, 30-minute IV infusion, Day 1 of every 21-day cycle starting from Cycle 2 until there was evidence of disease progression or unacceptable toxicity (Up to 16 cycles). Treatment with brentuximab vedotin beyond 16 cycles was permitted at the joint discretion of the sponsor and the investigator for those participants experiencing continued clinical benefit.	
Subject analysis set title	Brentuximab vedotin 1.8 mg/kg: Phase 1
Subject analysis set type	Sub-group analysis
Subject analysis set description: Brentuximab vedotin 1.8 mg/kg, 30-minute IV infusion, Day 1 of every 21-day cycle starting from Cycle 2 until there was evidence of disease progression or unacceptable toxicity (Up to 16 cycles). Treatment with brentuximab vedotin beyond 16 cycles was permitted at the joint discretion of the sponsor and the investigator for those participants experiencing continued clinical benefit.	
Subject analysis set title	Brentuximab vedotin 1.8 mg/kg: Phase 1
Subject analysis set type	Sub-group analysis
Subject analysis set description: Brentuximab vedotin 1.8 mg/kg, 30-minute IV infusion, Day 1 of every 21-day cycle until there was evidence of disease progression or unacceptable toxicity (Up to 16 cycles). Treatment with brentuximab vedotin beyond 16 cycles was permitted at the joint discretion of the sponsor and the investigator for those participants experiencing continued clinical benefit.	

Primary: Number of Participants with Adverse Events (AEs) and Serious Adverse Events (SAEs) (Phase 1)

End point title	Number of Participants with Adverse Events (AEs) and Serious Adverse Events (SAEs) (Phase 1) ^{[1][2]}
End point description: An AE is defined as any untoward medical occurrence in a clinical investigation participant administered a drug; it does not necessarily have to have a causal relationship with treatment. A SAE is any experience that suggests a significant hazard, contraindication, side effect or precaution that results in	

death, is life-threatening, required in-patient hospitalization or prolongation of existing hospitalization, results in persistent or significant disability/incapacity, is a congenital anomaly/birth defect or is medically significant. A treatment-emergent adverse event (TEAE) is defined as an adverse event with an onset that occurs after receiving study drug. AE severity was graded according to NCI CTCAE version 4.03. Safety population is defined as all participants who received at least 1 dose of study drug. Participants enrolled in Phase 1 of study were evaluated for this endpoint.

End point type	Primary
----------------	---------

End point timeframe:

From the first dose through 30 days after the last dose of study medication (Up to 15 months)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive statistics were planned for this endpoint.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was planned to be assessed in Phase 1 arm groups.

End point values	Brentuximab vedotin 1.4 mg/kg: Phase 1	Brentuximab vedotin 1.8 mg/kg: Phase 1		
Subject group type	Reporting group	Subject analysis set		
Number of subjects analysed	3	9		
Units: participants

SAE	0	4		

Statistical analyses

No statistical analyses for this end point

Primary: Number of Participants with Abnormal Clinical Laboratory Values Reported as AEs (Phase 1)

End point title	Number of Participants with Abnormal Clinical Laboratory Values Reported as AEs (Phase 1) ^{[3][4]}
-----------------	---

End point description:

Abnormal clinical laboratory values (serum chemistry and hematology) were reported as AEs if they were considered by the investigator to be a clinically significant change from Baseline or led to premature discontinuation of study treatment, dose modification, or other therapeutic intervention. Safety population is defined as all participants who received at least 1 dose of study drug. Participants enrolled in Phase 1 of study were evaluated for this endpoint.

End point type	Primary
----------------	---------

End point timeframe:

From the first dose through 30 days after the last dose of study medication (Up to 15 months)

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive statistics were planned for this endpoint.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was planned to be assessed in Phase 1 arm groups.

End point values	Brentuximab vedotin 1.4 mg/kg: Phase 1	Brentuximab vedotin 1.8 mg/kg: Phase 1

Statistical analyses

No statistical analyses for this end point

Primary: Overall Response Rate (ORR) (Phase 1 and 2)

End point title	Overall Response Rate (ORR) (Phase 1 and 2) ^[16]
-----------------	---

End point description:

Overall response rate is defined as the percentage of participants with complete remission (CR) or partial remission (PR) as assessed by an independent review facility (IRF) using International Working

Group (IWG) Revised Response Criteria for Malignant Lymphoma. CR is defined as the disappearance of all evidence of disease and PR is defined as regression of measurable disease and no new sites. Response-evaluable population included participants who received at least 1 dose of study drug, have measurable disease at baseline, and 1 postbaseline disease assessment. Data was summarized together for Phase 1 and 2 participants in brentuximab 1.8 mg/kg arm group.

End point type	Primary
----------------	---------

End point timeframe:

Cycles 2, 4, 7, 10, 13 and 16 (21-day cycles) until disease progression, death or end of treatment (EOT) (Up to 15 months)

Notes:

[16] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive statistics were planned for this endpoint.

End point values	Brentuximab vedotin 1.4 mg/kg: Phase 1	Brentuximab vedotin 1.8 mg/kg: Phase 1 and 2 r/r HL only	Brentuximab vedotin 1.8 mg/kg: Phase 1 and 2 r/r sALCL only

Secondary: Time to Progression (TTP) (Phase 1 and 2)

End point title	Time to Progression (TTP) (Phase 1 and 2)
-----------------	---

End point description:

TTP is defined as the time in months from first dose until the first subsequent documentation of objective tumor progression. Progressive disease (PD) is defined as any new lesion or increase by $\geq 50\%$ of previously involved sites from nadir. Safety population is defined as all participants who received at least 1 dose of study drug. TTP was censored on last radiological assessment of measured lesions documenting absence of PD for participants who did not have tumor progression. Safety population is defined as all participants who received at least 1 dose of study drug. TTP was censored on last radiological assessment of measured lesions documenting absence of PD for participants who did not have tumor progression. Here, 9999 indicates upper limit of confidence interval was not reached due to low number of participants with events.

End point type	Secondary

Secondary: Time to Response (Phase 1 and 2)

End point title	Time to Response (Phase 1 and 2)
-----------------	----------------------------------

End point description:

Time to response is defined as the time in months from the first dose of study treatment until the date of the first assessment of confirmed CR or PR. as assessed by an IRF using IWG revised response criteria for malignant lymphoma. CR is defined as the disappearance of all evidence of disease and PR is defined as regression of measurable disease and no new sites. Response-evaluable population included participants who received at least 1 dose of study drug, have measurable disease at baseline, and 1 postbaseline disease assessment. Time to response was censored on the last radiological assessment of measured lesions documenting absence of CR or PR for participants who did not have CR or PR. Here, 9999 indicates upper limit of confidence interval was not reached due to low number of participants with events. 99999 indicates median was not reached as no participant had response.

End point type	Secondary
----------------	-----------

End point timeframe:

Secondary: Number of Participants with Adverse Events (AEs) and Serious Adverse Events (SAEs) (Phase 1 and 2)

End point title	Number of Participants with Adverse Events (AEs) and Serious Adverse Events (SAEs) (Phase 1 and 2)
-----------------	--

End point description:

An AE is defined as any untoward medical occurrence in a clinical investigation participant administered a drug; it does not necessarily have to have a causal relationship with this treatment. A SAE is any experience that suggests a significant hazard, contraindication, side effect or precaution that: results in death, is life-threatening, required in-patient hospitalization or prolongation of existing hospitalization, results in persistent or significant disability/incapacity, is a congenital anomaly/birth defect or is medically significant. A treatment-emergent adverse event (TEAE) is defined as an adverse event with an onset that occurs after receiving study drug. AE severity was graded according to National Cancer Institute Common Terminology Criteria for Adverse Events (NCI CTCAE) version 4.03. Safety population is defined as all participants who received at least 1 dose of study drug. Data was summarized together for Phase 1 and 2 participants.

Cycle 15 Day 1, 5 minutes Post-Dose (n=0,6)	999999 (± 999999)	49.7 (± 6.88)		
Cycle 16 Day 1, Pre-Dose (n=0,6)	999999 (± 999999)	4.60 (± 1.67)		
Cycle 16 Day 1, 5 minutes Post-Dose (n=0,6)	999999 (± 999999)	49.7 (± 7.61)		

Notes:

[22] - Here, 99999 indicates data was below the limit of quantification.

Statistical analyses

No statistical analyses for this end point

Secondary: Monomethyl Auristatin E (MMAE) Plasma Concentrations (Phase 1 and 2)

End point title	Monomethyl Auristatin E (MMAE) Plasma Concentrations (Phase 1 and 2) ^[23]
-----------------	--

End point description:

Blood samples were collected and tested for MMAE plasma concentrations. PK-evaluable population was defined as participants with sufficient dosing and PK data to reliably estimate PK parameters. Cycle 2 Day 2 values are collected in phase 1 participants only. Data was summarized together for all participants in brentuximab vedotin 1.8 mg/kg arm group. Here, 999999 indicates arithmetic mean and standard deviation was not estimable since the number of participants analyzed were '0'. 99999 indicates data was below the limit of quantification. n is the number of participants analyzed at the given time-point.

End point type	Secondary
----------------	-----------

End point timeframe:

Cycle 1 and 8 pre-dose and 5 minutes, 24, 48, 96 and 312 hours post-dose; Cycle 2 pre-dose, 5

Notes:

[23] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The data for this endpoint was planned to be assessed in combined form for Phase 2 arm groups.

Notes:

[24] - Here, 99999 indicates data was below the limit of quantification.

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From the first dose through 30 days after the last dose of study medication (Up to 15 months)

Adverse event reporting additional description:

At each visit the investigator had to document any occurrence of adverse events and abnormal laboratory findings. Any event spontaneously reported by the participant or observed by the investigator was recorded, irrespective of the relation to study treatment.

Assessment type	Systematic

Reporting groups

Reporting group title	Brentuximab vedotin 1.4 mg/kg: Phase 1
-----------------------	--

Reporting group description:

Brentuximab vedotin 1.4 mg/kg, 30-minute IV infusion, Day 1 of every 21-day cycle, until there was evidence of disease progression or unacceptable toxicity.

Reporting group title	Brentuximab vedotin 1.8 mg/kg: Phase 1 and 2 r/r HL only
-----------------------	--

Reporting group description:

Participants with r/r HL received brentuximab vedotin 1.8 mg/kg, 30-minute IV infusion, Day 1 of every 21-day cycle until there was evidence of disease progression or unacceptable toxicity (Up to 16 cycles). Treatment with brentuximab vedotin beyond 16 cycles was permitted at the joint discretion of the sponsor and the investigator for those participants experiencing continued clinical benefit.

Reporting group title	Brentuximab vedotin 1.8 mg/kg: Phase 1 and 2 r/r sALCL only
-----------------------	---

Reporting group description:

Participants with r/r systemic anaplastic large-cell lymphoma (sALCL) received brentuximab vedotin 1.8 mg/kg, 30-minute IV infusion, Day 1 of every 21-day cycle until there was evidence of disease progression or unacceptable toxicity (Up to 16 cycles). Treatment with brentuximab vedotin beyond 16 cycles was permitted at the joint discretion of the sponsor and the investigator for those participants experiencing continued clinical benefit.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 July 2011	The amendment promoted participant safety by reducing the opportunity for potential drug-drug interactions, using an objective definition of dose-limiting toxicity (DLT), and specifying administration equipment that ensures drug compatibility.
06 February 2012	<ul style="list-style-type: none">• The protocol excluded participants with signs or symptoms of progressive multifocal leukoencephalopathy (PML) and instructed for management of suspected PML as brentuximab vedotin discontinuation.• Information was added on management of infusion-related reactions, including instructions to immediately and permanently discontinue administration of brentuximab vedotin for Grade 3 or higher infusion-related reactions consistent with anaphylaxis.• Included information on occurrence of pulmonary toxicity and specifies that concomitant use of bleomycin with brentuximab vedotin is contraindicated.• The original protocol stated that brentuximab vedotin dose should be held in case of new or worsening events of Grade 2 or 3 neuropathy. To ensure participant's safety and conform to dosing guidelines, an exclusion criterion was added for participants with Grade 2/higher peripheral neuropathy at the time of screening.• Participants who were pregnant or both lactating and breastfeeding were not eligible for the study. This exclusion criterion was inadvertently omitted from original protocol and was added to this amendment.• A washout period of at least 14 days was required for participants who received local palliative radiation therapy; a washout period of at least 84 days was required for participants who received radiation therapy to more than 25% of bone marrow-containing spaces. Exclusion criteria was added to specify the restrictions on receiving radiation therapy prior to first dose of study drug.• Planned imaging assessments were revised in order to minimize radiation exposure in this pediatric population. Magnetic resonance imaging (MRI) was to be performed for neck, abdomen, and pelvis evaluations; computed tomography (CT) scans were to be used for chest evaluations only.• The definition of enrollment was changed to at the time of first dose of study drug.• The contact information for serious adverse events (SAEs) and events of pregnancy was revised.
12 June 2014	<ul style="list-style-type: none">• Duration of follow-up was changed to align with content of pediatric investigation plan. PIP states that participants will be followed for safety and survival for 2 years after enrollment. References to follow-up revised to state that participants will be followed for progression-free survival and overall survival every 12 weeks for 12 months after End of Treatment visit. Thereafter, assessment for OS was to continue every 6 months until sooner of death or study closure or a maximum of 2 years after enrollment of last participant.• Described study procedures for participants who continue to receive brentuximab vedotin after Cycle 16 and further clarifies other study procedures associated with study conduct.• Clarified primary endpoint for phase 2 of study is best overall response rate• Inclusion criterion for total bilirubin has been revised to include participants with total serum bilirubin ≤ 3 times upper limit of normal range (ULN) if abnormal value is due to indirect hyperbilirubinemia due to Gilbert's disease.• Participants with elevated alanine aminotransferase or aspartate aminotransferase values 5 times ULN may be enrolled if elevation can be reasonably ascribed to presence of metastatic disease in liver.• Exclusions of previous allogeneic stem cell transplant or autologous stem cell infusion was changed from within 6 months and 6 weeks before first dose of study drug, respectively, to within 3 months and 4 weeks before first dose of study drug, respectively.• Exclusion criterion for cytochrome P450 3A4 inhibitors was changed to exclude both strong and listed moderate inhibitors of CYP3A4 within 2 weeks before first dose of study drug, and a change to timing for exclusion of corticosteroids.• Following potential risks were added to Risks in Children section to align with updates to safety profile of brentuximab vedotin: Stevens-Johnson syndrome, pancreatitis, hepatotoxicity (elevated AST and ALT).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
