

## Clinical trial results:

**A Phase IIb/III randomised, double-blind, placebo-controlled study comparing first-line therapy with or without TG4010 immunotherapy product in patients with stage IV non-small cell lung cancer (NSCLC).**

### Summary

EudraCT number	2011-001468-23
Trial protocol	BE HU GB DE ES PL IT
Global end of trial date	06 July 2015

### Results information

Result version number	v1 (current)
This version publication date	20 July 2017
First version publication date	20 July 2017

### Trial information

#### Trial identification

Sponsor protocol code	TG4010.14
-----------------------	-----------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 July 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 December 2014
Global end of trial reached?	Yes
Global end of trial date	06 July 2015
Was the trial ended prematurely?	Yes

Notes:

---

## General information about the trial

Main objective of the trial:

Phase IIb part: to prospectively validate the level of Triple Positive Activated Lymphocytes (TrPAL), as a predictive biomarker of TG4010's activity by comparing Progression-Free Survival (PFS) between the TG4010 arm (TG4010 + first-line therapy) and the placebo arm (placebo + first-line therapy) in the 2 subgroups of subjects according to their level of TrPAL before randomisation (normal and high level of TrPAL).

Phase III part: To demonstrate that TG4010 improves overall survival (OS) as compared to placebo in stage IV NSCLC patients with non-squamous tumour histology receiving first-line chemotherapy.

Protection of trial subjects:

This study was conducted in accordance with the updated Declaration of Helsinki adopted by the World Medical Association, in compliance with the approved protocol and its amendments, the International Council for Harmonisation good clinical practice, and national regulatory requirements in the participating countries.

Background therapy:

Chemotherapy was given as 21-day cycles starting from Day 1 of Cycle 1 for a minimum of 4 cycles and up to 6 cycles. The platinum doublet chemotherapy regimen administered was determined by histology and at Investigator discretion as follows:

- Non-squamous cell: Paclitaxel (200 milligrams/square metre [mg/m<sup>2</sup>]) and carboplatin (target area under the curve [AUC] 6.0) on Day 1 of each cycle with the next course of chemotherapy on Day 22; OR pemetrexed (500 mg/m<sup>2</sup>) and cisplatin (75 mg/m<sup>2</sup>) on Day 1 of each cycle with the next course of chemotherapy on Day 22
- Squamous cell: Paclitaxel (200 mg/m<sup>2</sup>) and carboplatin (AUC 6.0) on Day 1 of each cycle with the next course of chemotherapy on Day 22; OR gemcitabine (1250 mg/m<sup>2</sup>) on Day 1 and Day 8 of each cycle and cisplatin (75 mg/m<sup>2</sup>) on Day 1 of each cycle with the next course of chemotherapy on Day 22.

Bevacizumab was allowed for patients with non-squamous carcinoma (if initiated at the same time as chemotherapy) and was administered at a dose of 7.5 or 15 mg/kilogram (kg) according to country-specific approved labelling or prescribing information. Bevacizumab treatment was given on Day 1 of each cycle (starting from Day 1 of Cycle 1) until disease progression or premature discontinuation due to any reason.

Pemetrexed (for non-squamous carcinoma) or erlotinib (whatever the histology) were to be given as maintenance therapy in eligible patients who have not progressed after 4 to 6 cycles of chemotherapy (according to labeling in each country) unless they received bevacizumab as part of first-line therapy. Pemetrexed (at the dose of 500 mg/m<sup>2</sup> every 3 weeks, given on the same day as TG4010/placebo) or erlotinib (at the dose of 150 mg daily) were administered in combination with TG4010/placebo until disease progression or premature discontinuation due to any reason.

Evidence for comparator: -

Actual start date of recruitment	10 April 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Israel: 3
Country: Number of subjects enrolled	United States: 9
Country: Number of subjects enrolled	Poland: 22
Country: Number of subjects enrolled	Spain: 20
Country: Number of subjects enrolled	United Kingdom: 10
Country: Number of subjects enrolled	Belgium: 24
Country: Number of subjects enrolled	France: 90
Country: Number of subjects enrolled	Hungary: 41
Country: Number of subjects enrolled	Italy: 3
Worldwide total number of subjects	222
EEA total number of subjects	210

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	143
From 65 to 84 years	79
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study consisted of a Phase IIb and a Phase III part. 222 subjects were randomised into the Phase IIb part in a 1:1 ratio of TG4010 to placebo. The cut-off date for primary analysis of PFS was 15 December 2014 and OS cut off date was 6 July 2015. The study was prematurely terminated after completion of Phase IIb and Phase III did not proceed.

### Pre-assignment

Screening details:

The level of TrPAL (percentage of triple positive CD16+ CD56+ CD69+ cells among the total lymphocyte population) was evaluated before randomisation. For the phase IIb part, subjects were categorised in 1 of the 2 groups (normal and high TrPAL) by using a cut-off value determined in adult healthy donors as being the upper limit of normal (ULN).

### Period 1

Period 1 title	Phase IIb Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Blinding implementation details:

The monitors, data managers, investigators and subjects remained blinded to drug identity until the date of the last final analysis of the Phase IIb. The statistician was unblinded for all subjects at the time of final analysis in subjects with normal TrPAL. The sponsor was unblinded for the treatment code firstly for subjects with normal TrPAL at the time of the final analysis in this subgroup and secondly for subjects with high TrPAL at the time of the final analysis in this subgroup.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	TG4010

Arm description:

Subjects received TG4010 plus chemotherapy as first-line treatment followed by TG4010 plus maintenance therapy if appropriate.

TG4010 was administered on Day 1 of Cycle 1 of chemotherapy and then weekly for 6 weeks by subcutaneous (SC) injections, then once every 3 weeks until disease progression or premature discontinuation. Chemotherapy was given as 21-day cycles for a minimum of 4 cycles and up to 6 cycles. If prescribed, bevacizumab was continued in combination with TG4010 and administered every 3 weeks until disease progression, premature discontinuation, or toxicity.

Arm type	Experimental
Investigational medicinal product name	TG4010
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

TG4010 is a suspension of recombinant modified Vaccinia virus strain Ankara (MVA) carrying coding sequences for human Mucin 1 (MUC1) antigen and human interleukin-2 in the diluent named TG0008.

TG4010 was administered at a dose of  $1 \times 10^8$  plaque-forming unit (pfu) (corresponding to 0.5 millilitre [mL] of TG4010) once every week for 6 weeks, starting on Day 1 of Cycle 1, and then every 3 weeks thereafter until disease progression or premature discontinuation due to any reason. Each SC injection was performed in a single site. Four injection sites were used successively (left and right arm, left and right thigh) according to a rotation schedule.

<b>Arm title</b>	Placebo
------------------	---------

---

**Arm description:**

Subjects received placebo plus chemotherapy as first-line treatment followed by placebo plus maintenance therapy if appropriate.

Placebo was administered on Day 1 of Cycle 1 of chemotherapy and then weekly for 6 weeks by SC injections, then once every 3 weeks until disease progression or premature discontinuation. Chemotherapy was given as 21-day cycles for a minimum of 4 cycles and up to 6 cycles. If prescribed, bevacizumab was continued in combination with placebo and administered every 3 weeks until disease progression, premature discontinuation, or toxicity.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	TG0008
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

**Dosage and administration details:**

The placebo used in this study was the diluent of TG4010 (TG0008) and was administered as a single SC injection in a volume of 0.5 mL. Placebo was administered once every week for 6 weeks, starting on Day 1 of Cycle 1, and then every 3 weeks thereafter until disease progression or premature discontinuation due to any reason. Four injection sites were used successively (left and right arm, left and right thigh) according to a rotation schedule.

<b>Number of subjects in period 1</b>	TG4010	Placebo
Started	111	111
Completed	105	98
Not completed	6	13
Consent withdrawn by subject	4	7
Investigator's Decision	2	2
Administrative problems	-	1
Lost to follow-up	-	3

Subject analysis set title	TG4010: Normal TrPAL Subgroup
----------------------------	-------------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

Analyses were performed independently in each group of subjects according to their level of TrPAL before randomisation, based on a predetermined ULN cut-off. Of 111 subjects randomised to the TG4010 arm, 85 were categorised with a level of TrPAL less than or equal to the ULN (normal TrPAL).

Subject analysis set title	Placebo: Normal TrPAL Subgroup
----------------------------	--------------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

Analyses were performed independently in each group of subjects according to their level of TrPAL before randomisation, based on a predetermined ULN cut-off. Of 111 subjects randomised to the placebo arm, 85 were categorised with a level of TrPAL less than or equal to the ULN (normal TrPAL).

Subject analysis set title	TG4010: High TrPAL Subgroup
----------------------------	-----------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

Analyses were performed independently in each group of subjects according to their level of TrPAL before randomisation, based on a predetermined ULN cut-off. Of 111 subjects randomised to the TG4010 arm, 26 were categorised with a level of TrPAL greater than the ULN (high TrPAL).

Subject analysis set title	Placebo: High TrPAL Subgroup
----------------------------	------------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

Analyses were performed independently in each group of subjects according to their level of TrPAL before randomisation, based on a predetermined ULN cut-off. Of 111 subjects randomised to the placebo arm, 26 were categorised with a level of TrPAL greater than the ULN (high TrPAL).

Subject analysis set title	TG4010: Non-elevated TrPAL Subgroup
----------------------------	-------------------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

By using a quartile approach for categorisation, subjects with less than or equal to Q3 cut-off value for TrPAL at baseline were categorised into the non-elevated TrPAL subgroup. Of 111 subjects randomised to the TG4010 arm, 71 were categorised with non-elevated TrPAL levels.

Subject analysis set title	Placebo: Non-elevated TrPAL Subgroup
----------------------------	--------------------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

**Subject analysis set description:**

By using a quartile approach for categorisation, subjects with less than or equal to Q3 cut-off value for TrPAL at baseline were categorised into the non-elevated TrPAL subgroup. Of 111 subjects randomised to the placebo arm, 76 were categorised with non-elevated TrPAL levels.

Subject analysis set title	TG4010: Elevated TrPAL Subgroup
Subject analysis set type	Sub-group analysis

**Subject analysis set description:**

By using a quartile approach for categorisation, subjects with greater than the Q3 cut-off value for TrPAL at baseline were categorised into the elevated TrPAL subgroup. Of 111 subjects randomised to the TG4010 arm, 40 were categorised with elevated TrPAL levels.

Subject analysis set title	Placebo: Elevated TrPAL Subgroup
Subject analysis set type	Sub-group analysis

**Subject analysis set description:**

By using a quartile approach for categorisation, subjects with greater than the Q3 cut-off value for TrPAL at baseline were categorised into the non-elevated TrPAL subgroup. Of 111 subjects randomised to the placebo arm, 35 were categorised with elevated TrPAL levels.

**Primary: Comparison of PFS Events in Subjects Treated with TG4010 or Placebo.**

End point title	Comparison of PFS Events in Subjects Treated with TG4010 or Placebo.
-----------------	--

**End point description:**

The primary analysis of PFS was performed in the 2 groups of subjects defined by their level of TrPAL at baseline ( $\leq$  ULN [normal] or  $>$  ULN [high]). This analysis was repeated in the 2 groups of subjects defined by the quartile approach, non-elevated (corresponding to  $\leq$  Q3) and elevated (corresponding to  $>$ Q3) TrPAL levels. PFS events were recorded from the date of randomisation to the date of first documented tumour progression or death due to any cause, whichever occurred first. PFS was censored if no progression or death was observed at the cut-off date for analysis, or at the date when a further antineoplastic therapy was started. Determination of progression was based on local evaluations of baseline and post-baseline scans and by evaluation of target and non-target disease according to the Response Evaluation Criteria In Solid Tumours (RECIST) Version 1.1.

End point type	Primary
----------------	---------

**End point timeframe:**

Tumour progression was evaluated every 6 weeks until documented progression or for a period of 9 months. Beyond 9 months, evaluations were performed every 12 weeks until documented disease progression. Up to a maximum of 140 weeks (until cut-off date).

## Statistical analyses

Statistical analysis title	Bayesian analysis: Normal TrPAL subgroup
Statistical analysis description:	
A Bayesian analysis was performed to prospectively validate the level of TrPAL as a predictive biomarker of TG4010's activity. After 89 PFS events had been observed in the normal TrPAL subgroup, the null hypothesis $H_0: HR \geq 1$ was tested against the alternative hypothesis $H_A: HR < 1$ , where HR is the PFS hazard ratio for first-line therapy plus TG4010 (TG4010 arm) relative to first-line therapy plus placebo (placebo arm).	
Comparison groups	TG4010: Normal TrPAL Subgroup v Placebo: Normal TrPAL Subgroup
Number of subjects included in analysis	170
Analysis specification	Pre-specified
Analysis type	other <sup>[1]</sup>
P-value	= 0.016 <sup>[2]</sup>
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.75
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.54
upper limit	1.03

Notes:

[1] - The null hypothesis  $H_0: HR \geq 1$  was tested against the alternative hypothesis  $H_A: HR < 1$ , where HR is the PFS hazard ratio for first-line therapy+TG4010 (TG4010 arm) relative to first-line therapy+placebo (placebo arm). The hypothesis was tested by using the posterior distribution of an estimator of the log HR.

[2] - Efficacy criteria:  $1 - P(HR < 1 / \text{observed data}) \leq 0.05$

Statistical analysis title	Bayesian analysis: High TrPAL subgroup
Statistical analysis description:	
A Bayesian analysis was performed to prospectively validate the level of TrPAL as a predictive biomarker of TG4010's activity. After 38 PFS events had been observed in the high TrPAL subgroup, the null hypothesis $H_0: HR \leq 1$ was tested against the alternative hypothesis $H_A: HR > 1$ , where HR was the PFS hazard ratio for first-line therapy plus TG4010 relative to first-line therapy plus placebo.	
Comparison groups	TG4010: High TrPAL Subgroup v Placebo: High TrPAL Subgroup
Number of subjects included in analysis	52

## Secondary: Comparison of Overall Response Rate (ORR) in Subjects Treated with TG4010 or Placebo.

End point title	Comparison of Overall Response Rate (ORR) in Subjects Treated with TG4010 or Placebo.
-----------------	---

End point description:

ORR was defined as the percentage of subjects whose best overall response to tumour evaluation was either complete response (CR) or partial response (PR) confirmed at least 4 weeks after initial documentation. Objective response rate was the percentage of subjects whose best overall response is either CR or PR according to RECIST version 1.1. Results are presented by treatment arm and by TrPAL subgroup for objective response rate and also percentage of subjects with best overall response (CR, PR, stable disease and progressive disease).

End point type	Secondary
----------------	-----------

End point timeframe:

Tumour response was evaluated every 6 weeks until documented progression or for a period of 9 months. Beyond 9 months, evaluations were performed every 12 weeks until documented disease progression. Up to a maximum of 140 weeks (until cut-off date).

## **Secondary: Duration of Overall Response (DOR) in Subjects Treated with TG4010 or Placebo.**

End point title	Duration of Overall Response (DOR) in Subjects Treated with TG4010 or Placebo.
-----------------	--

End point description:

DOR in weeks applied only to patients whose best overall tumour response was CR or PR. The start date was the date of first documented response (CR or PR) and the end date was the date of event defined as first documented disease progression or death due to underlying cancer. DoR was censored if progression or death due to underlying cancer was not observed at the cut-off date for the analysis or start of further antineoplastic therapy. The censoring date was the date of the last evaluable tumour assessment.

For the purpose of reporting data, where the result was recorded as 'not reached' (i.e. infinity) an arbitrary value of 999999 has been assigned.

End point type	Secondary
----------------	-----------

End point timeframe:

Tumour response was evaluated every 6 weeks until documented progression or for a period of 9 months. Beyond 9 months, evaluations were performed every 12 weeks until documented disease progression. Up to a maximum of 140 weeks (until cut-off date).

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From the first day of study treatment until 28 days after the last dose of study treatment (up to a maximum of 107 weeks + 28 days).

Adverse event reporting additional description:

Adverse events were summarised by treatment arm (TG4010 or placebo) in subjects that had received at least one injection of TG4010 or placebo (110 patients in TG4010 arm and 107 patients in the placebo arm). Causality was assessed in relation to TG4010 or placebo.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA

--------------------	------

### Reporting groups

Reporting group title	TG4010
-----------------------	--------

Reporting group description:

Subjects received TG4010 plus chemotherapy as first-line treatment followed by TG4010 plus maintenance therapy if appropriate.

TG4010 was administered on Day 1 of Cycle 1 of chemotherapy and then weekly for 6 weeks by SC injections, then once every 3 weeks until disease progression or premature discontinuation.

Chemotherapy was given as 21-day cycles for a minimum of 4 cycles and up to 6 cycles. If prescribed, bevacizumab was continued in combination with TG4010 and administered every 3 weeks until disease progression, premature discontinuation, or toxicity.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects received TG4010 plus chemotherapy as first-line treatment followed by placebo plus maintenance therapy if appropriate.

Placebo was administered on Day 1 of Cycle 1 of chemotherapy and then weekly for 6 weeks by SC injections, then once every 3 weeks until disease progression or premature discontinuation.

Chemotherapy was given as 21-day cycles for a minimum of 4 cycles and up to 6 cycles. If prescribed, bevacizumab was continued in combination with placebo and administered every 3 weeks until disease progression, premature discontinuation, or toxicity.

Blood and lymphatic system disorders			

Anaemia			
subjects affected / exposed	50 / 110 (45.45%)	38 / 107 (35.51%)	
occurrences (all)	66	50	
Leukopenia			
subjects affected / exposed	10 / 110 (9.09%)	11 / 107 (10.28%)	
occurrences (all)	11	16	
Lymphopenia			
subjects affected / exposed	4 / 110 (3.64%)	7 / 107 (6.54%)	
occurrences (all)	5	9	
Neutropenia			
subjects affected / exposed	49 / 110 (44.55%)	38 / 107 (35.51%)	
occurrences (all)	119	85	
Thrombocytopenia			
subjects affected / exposed	27 / 110 (24.55%)	20 / 107 (18.69%)	
occurrences (all)	42	32	
Ear and labyrinth disorders			
Tinnitus			
subjects affected / exposed	11 / 110 (10.00%)	7 / 107 (6.54%)	
occurrences (all)	11	9	
Eye disorders			
Lacrimation Increased			
subjects affected / exposed	7 / 110 (6.36%)	5 / 107 (4.67%)	
occurrences (all)	8	5	
Gastrointestinal disorders			
Abdominal Pain			
subjects affected / exposed	15 / 110 (13.64%)	9 / 107 (8.41%)	
occurrences (all)	16	13	
Abdominal Pain upper			
subjects affected / exposed	10 / 110 (9.09%)	8 / 107 (7.48%)	
occurrences (all)	10	9	
Constipation			
subjects affected / exposed	22 / 110 (20.00%)	29 / 107 (27.10%)	
occurrences (all)	26	35	
Diarrhoea			
subjects affected / exposed	27 / 110 (24.55%)	21 / 107 (19.63%)	
occurrences (all)	35	31	
Nausea			

subjects affected / exposed occurrences (all)	54 / 110 (49.09%) 89	44 / 107 (41.12%) 76	
Stomatitis subjects affected / exposed occurrences (all)	9 / 110 (8.18%) 12	14 / 107 (13.08%) 15	
Vomiting subjects affected / exposed occurrences (all)	32 / 110 (29.09%) 47	35 / 107 (32.71%) 68	
Skin and subcutaneous tissue disorders Alopecia subjects affected / exposed occurrences (all)	13 / 110 (11.82%) 13	8 / 107 (7.48%) 8	
Erythema subjects affected / exposed occurrences (all)	6 / 110 (5.45%) 8	6 / 107 (5.61%) 6	
Rash subjects affected / exposed occurrences (all)	6 / 110 (5.45%) 9	5 / 107 (4.67%) 6	
Renal and urinary disorders Renal Failure subjects affected / exposed occurrences (all)	3 / 110 (2.73%) 4	8 / 107 (7.48%) 8	
Musculoskeletal and connective tissue disorders Arthralgia subjects affected / exposed occurrences (all)	9 / 110 (8.18%) 11	8 / 107 (7.48%) 12	
Back pain subjects affected / exposed occurrences (all)	14 / 110 (12.73%) 15	12 / 107 (11.21%) 13	
Musculoskeletal pain subjects affected / exposed occurrences (all)	10 / 110 (9.09%) 10	4 / 107 (3.74%) 5	
Myalgia subjects affected / exposed occurrences (all)	7 / 110 (6.36%) 7	3 / 107 (2.80%) 4	
Pain in Extremity			

subjects affected / exposed occurrences (all)	16 / 110 (14.55%) 18	6 / 107 (5.61%) 10	
Infections and infestations			
Bronchitis			
subjects affected / exposed	10 / 110 (9.09%)	11 / 107 (10.28%)	
occurrences (all)	11	12	
Respiratory tract infection			
subjects affected / exposed	6 / 110 (5.45%)	4 / 107 (3.74%)	
occurrences (all)	7	5	
Metabolism and nutrition disorders			
Decreased appetite			
subjects affected / exposed	24 / 110 (21.82%)	27 / 107 (25.23%)	
occurrences (all)	30	32	
Hypokalaemia			
subjects affected / exposed	7 / 110 (6.36%)	13 / 107 (12.15%)	
occurrences (all)	8	16	
Hyponatraemia			
subjects affected / exposed	7 / 110 (6.36%)	6 / 107 (5.61%)	
occurrences (all)	7	6	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 April 2012	Major changes included the following: <ul style="list-style-type: none"><li>• Inclusion criteria were modified for some laboratory parameters and additional laboratory parameters were added for routine monitoring (e.g. bilirubin)</li><li>• TOR was added as a secondary objective</li><li>• PS was added as a stratification factor for statistical analyses (as it is a stratification factor in the randomisation process)</li><li>• Changes were made to the sensitivity analyses and secondary objectives for the Phase III part of the study</li></ul>
02 July 2013	Major changes included the following: <ul style="list-style-type: none"><li>• An exploratory objective evaluating the response rate (i.e. proportion of patients with CR or PR) at tumour evaluation #2 was added</li><li>• The statistical methods were modified to allow for a preliminary analysis of the subgroup of patients with a high level of TrPAL, at the same time as the primary analysis was performed in the subgroup of patients with normal TrPAL</li></ul>
06 November 2013	Major changes included the following: <ul style="list-style-type: none"><li>• Due to the increased time lag in the occurrence of the required number of PFS events in the subgroups of normal and high TrPAL patients necessary for the final analysis, implicating that final analysis in each subgroup could not be performed at the same time, time points for unblinding were revised and delayed for the high TrPAL subgroup until the final analysis results were available in this subgroup to avoid the introduction of possible biases.</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
06 July 2015	A decision was taken by the sponsor for business reasons to not proceed with Phase III part after the completion of Phase IIb.	-

Notes:

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to the early termination of this study, this results posting is a complete record of the Phase IIb part of the study only. Phase III did not proceed and is therefore not included in any part.

Notes:
