Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 August 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	25 August 2015
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

This study was designed to evaluate the effect of Herceptin (trastuzumab) administered at a loading dose of 8 milligrams per kilogram (mg/kg) followed by 6 mg/kg every three weeks (q3w) as standard of care versus a loading dose of Herceptin at 8 mg/kg followed by 10 mg/kg along with cisplatin and capecitabine, to test whether it produced higher trastuzumab exposure and might have resulted in improved survival duration.

Protection of trial subjects:

The study was conducted in accordance with the principles of the "Declaration of Helsinki" and Good Clinical Practice (GCP).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 December 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	24 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	170
From 65 to 84 years	125
85 years and over	1

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 248 participants (124 participants per group) were randomized in the study up to data cutoff date of 13 February 2015, and 48 additional participants (24 participants per group) were randomized between data cutoff date of 13 February 2015 and end of study (25 August 2015) for additional safety data.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Capecitabine + Cisplatin + Herceptin (6 mg/kg)

Arm description:

Participants received Herceptin at a loading dose of 8 mg/kg on Day 1 of Cycle 1 followed by 6 mg/kg every three weeks (q3w) as standard of care from Day 1 of Cycle 2 until disease progression, occurrence of unacceptable toxicity, or withdrawal from the study for another reason (cycle length = 21 days).

Participants also received cisplatin 80 milligrams per meter-squared (mg/m²) intravenously q3w plus capecitabine 800 mg/m² orally twice daily for 14 days q3w for up to 6 treatment cycles (Cycles 1 to 6).

Arm type	Active comparator
Investigational medicinal product name	Herceptin
Investigational medicinal product code	
Other name	Trastuzumab
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Herceptin was administered IV at a loading dose of 8 mg/kg on Day 1 of Cycle 1 followed by 6 mg/kg or 10 mg/kg (depending upon treatment assignment) q3w from Day 1 of Cycle 2 until disease progression, occurrence of unacceptable toxicity, or withdrawal from the study for another reason.

Arm title	Capecitabine + Cisplatin + Herceptin (10 mg/kg)
------------------	---

Arm description:

Participants received Herceptin at a loading dose of 8 mg/kg on Day 1 of Cycle 1 followed by 10 mg/kg q3w from Day 1 of Cycle 2 until disease progression, occurrence of unacceptable toxicity, or withdrawal from the study for another reason (cycle length = 21 days). Participants also received cisplatin 80 mg/m² intravenously q3w plus capecitabine 800 mg/m² orally twice daily for 14 days q3w for up to 6 treatment cycles (Cycles 1 to 6).

Arm type	Experimental
Investigational medicinal product name	Herceptin
Investigational medicinal product code	
Other name	Trastuzumab
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Herceptin was administered IV at a loading dose of 8 mg/kg on Day 1 of Cycle 1 followed by 6 mg/kg or 10 mg/kg (depending upon treatment assignment) q3w from Day 1 of Cycle 2 until disease progression, occurrence of unacceptable toxicity, or withdrawal from the study for another reason.

Number of subjects in period 1	Capecitabine + Cisplatin + Herceptin (6 mg/kg)	Capecitabine + Cisplatin + Herceptin (10 mg/kg)

Primary: Overall Survival - FAS

End point title	Overall Survival - FAS
-----------------	------------------------

End point description:

Overall survival was defined as the time from the date of randomization to the date of death from any cause. Overall survival was estimated among participants from the FAS using the Kaplan-Meier approach. The 95 percent (%) confidence interval (CI) for median was computed using the method of Brookmeyer and Crowley. FAS population. Here, number of participants analyzed reflects the number of participants who were evaluable for this outcome measure.

Reporting groups

Reporting group title	Capecitabine + Cisplatin + Herceptin (6 mg/kg)
-----------------------	--

Reporting group description:

Participants received Herceptin at a loading dose of 8 mg/kg on Day 1 of Cycle 1 followed by 6 mg/kg q3w as standard of care from Day 1 of Cycle 2 until disease progression, occurrence of unacceptable toxicity, or withdrawal from the study for another reason (cycle length = 21 days). Participants also received cisplatin 80 mg/m² intravenously q3w plus capecitabine 800 mg/m² orally twice daily for 14 days q3w for up to 6 treatment cycles (Cycles 1 to 6).

Reporting group title	Capecitabine + Cisplatin + Herceptin (10 mg/kg)
-----------------------	---

Reporting group description:

Participants received Herceptin at a loading dose of 8 mg/kg on Day 1 of Cycle 1 followed by 10 mg/kg q3w from Day 1 of Cycle 2 until disease progression, occurrence of unacceptable toxicity, or withdrawal from the study for another reason (cycle length = 21 days). Participants also received cisplatin 80 mg/m² intravenously q3w plus capecitabine 800 mg/m² orally twice daily for 14 days q3w for up to 6 treatment cycles (Cycles 1 to 6).

Serious adverse events	Capecitabine + Cisplatin + Herceptin (6 mg/kg)	Capecitabine + Cisplatin + Herceptin (10 mg/kg)	
Total subjects affected by serious adverse events			
subjects affected / exposed	35 / 147 (23.81%)	38 / 147 (25.85%)	
number of deaths (all causes)	77	84	
number of deaths resulting from adverse events

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 August 2011	<ul style="list-style-type: none">- Clarified the instructions for collection of pharmacokinetic samples for serial measurements of trastuzumab concentrations in case of dose delay of Herceptin.- Revised actions and maximum hold times for study drug administration for non-hematological Grade 3 and Grade 4 (excluding cardiac) and hematological toxicities (neutropenia) that were not specifically attributable to one component of study treatment but related to study treatment.- Clarified instructions for the reloading dose of Herceptin in case of delayed dose beyond 7 days for the higher dose Herceptin (8 mg/kg loading dose followed by 10 mg/kg q3w) and the standard of care dose Herceptin (8 mg/kg loading dose followed by 6 mg/kg q3w) treatment arms.- Provided revised guidance for dose modifications and timeframe of dose delay due to hematological toxicity attributable to capecitabine or cisplatin and revised platelet count threshold for assessment of need for dose modification or delay of capecitabine and/or cisplatin.
06 August 2013	<ul style="list-style-type: none">- Provided clarification and updated instructions to Protocol B for the pharmacokinetic sampling schedule in case of delay of Herceptin administration.- The cardiac safety follow-up timeline was extended from 6 to 24 months.- An inclusion criterion (lung or liver plus at least one other organ in addition to the primary tumor must be involved by metastatic gastric tumor) was clarified by specifying the acceptability of metastases in other locations such as distant lymph node, peritoneum, and malignant pleural effusion as a second site of metastasis.- Updated exclusion criterion to add basal cell carcinoma of the skin within the last five years prior to enrollment was an allowed malignancy. Reporting instructions for abnormal liver function tests were included to address the identification/reporting of potential drug-induced liver injury (DILI).- Extracellular domain (ECD) analyses were included in Cycles 2 to 5 of the main study in order to ensure that a sufficient number of data were collected for the second pharmacokinetic interim analysis in order to fully understand the distribution of the shed ECD concentrations in participants with metastatic gastric cancer (MGC), and to enable an accurate assessment of whether the increase in HER2 ECD levels would have an impact on serum trastuzumab pharmacokinetics. These analyses were incorporated into the protocol to support the EMA issued Follow-Up Measure (FUM 70.1, 70.2, and 70.3) for the MGC filing in Europe (Type II Variation on EME/HC/000278/II/47).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Trial was stopped for futility based on pre-planned interim analysis results.

Notes:
