

Clinical trial results:

A multicenter, randomized, controlled study to evaluate the efficacy and safety of short-term plasma exchange followed by long-term plasmaphereses with infusion of human albumin combined with intravenous immunoglobulin in patients with mild-moderate Alzheimer's disease.

Summary

EudraCT number	2011-001598-25
Trial protocol	ES
Global end of trial date	06 March 2018

Results information

Result version number	v1 (current)
This version publication date	01 March 2020
First version publication date	01 March 2020

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 July 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 March 2018
Global end of trial reached?	Yes
Global end of trial date	06 March 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the changes in the cognitive, functional, behavioral and global domains based on the different applicable psychometric batteries and scales.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 April 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 151
Country: Number of subjects enrolled	Spain: 171
Worldwide total number of subjects	322
EEA total number of subjects	171

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	94
From 65 to 84 years	224
85 years and over	4

Subject disposition

Recruitment

Recruitment details:

Subjects were recruited at 41 sites in the US and Spain between 2012 and 2016.

Pre-assignment

Screening details:

The total number of screened subjects were 496 (264 in US and 232 in Spain) in this study. Among them, 347 subjects were randomized (162 in US and 185 in Spain), and from this population, 25 subjects were randomized but not treated. As a result, 322 subjects were evaluable subjects.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind ^[1]
Roles blinded	Subject, Carer, Assessor

Blinding implementation details:

The control group was subjected to simulated procedures (full plasma exchange and low volume plasma exchange) with no direct connection or fluid interchange during the same time as the treated subjects and followed the same schedule of assessments. The duration of the sham FPE and LVPE procedures was similar to the real procedures. These control subjects also received the same visits and procedures (blood draws and lumbar puncture) as the subjects in the treatment group.

Arms

Are arms mutually exclusive?	Yes
Arm title	High Albumin + Immunoglobulin

Arm description:

Therapeutic plasma exchange with albumin 5% (intensive treatment period) + Low volume plasma exchange with high dose of albumin 20% or immunoglobulin 5% (maintenance treatment period)

Arm type	Experimental
Investigational medicinal product name	Albumin 5%
Investigational medicinal product code	
Other name	Albutein 5%, Human Albumin Grifols 5%
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Therapeutic plasma exchange with human albumin 5%

Investigational medicinal product name	Albumin 20%
Investigational medicinal product code	
Other name	Albutein 20%, Human Albumin Grifols 20%
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Low volume plasma exchange with human albumin 20%

Investigational medicinal product name	Immunoglobulin
Investigational medicinal product code	
Other name	Flebogamma 5% DIF
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Intravenous human immunoglobulin 5%

Arm title	Low Albumin + Immunoglobulin
Arm description: Therapeutic plasma exchange with albumin 5% (intensive treatment period) + Low volume plasma exchange with low dose of albumin 20% or immunoglobulin 5% (maintenance treatment period)	
Arm type	Experimental
Investigational medicinal product name	Albumin 5%
Investigational medicinal product code	
Other name	Albutein 5%, Human Albumin Grifols 5%
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details: Therapeutic plasma exchange with human albumin 5%	
Investigational medicinal product name	Albumin 20%
Investigational medicinal product code	
Other name	Albutein 20%, Human Albumin Grifols 20%
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details: Low volume plasma exchange with human albumin 20%	
Investigational medicinal product name	Immunoglobulin
Investigational medicinal product code	
Other name	Flebogamma 5% DIF
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details: Intravenous human immunoglobulin 5%	
Arm title	Low Albumin
Arm description: Therapeutic plasma exchange with albumin 5% (intensive treatment period) + Low volume plasma exchange with low dose of albumin 20% (maintenance treatment period)	
Arm type	Experimental
Investigational medicinal product name	Albumin 5%
Investigational medicinal product code	
Other name	Albutein 5%, Human Albumin Grifols 5%
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details: Therapeutic plasma exchange with human albumin 5%	
Investigational medicinal product name	Albumin 20%
Investigational medicinal product code	
Other name	Albutein 20%, Human Albumin Grifols 20%
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details: Low volume plasma exchange with human albumin 20%	
Arm title	Control (Sham) Group
Arm description: Simulated plasma exchange procedure. The simulated process did not involve fluid interchange. The control group was subjected to simulated procedures (full plasma exchange and low volume plasma exchange) with no direct connection or fluid interchange .	
Arm type	No intervention

Notes:

[1] - The number of roles blinded appears inconsistent with a single blinded trial. It is expected that there will be one role blinded in a single blind trial.

Justification: In this study, even though Subject, Carer, Assessor were blinded, the investigator team who were involved in the treatment were not blinded.

Number of subjects in period 1	High Albumin + Immunoglobulin	Low Albumin + Immunoglobulin	Low Albumin

Adverse events

Adverse events information

Timeframe for reporting adverse events:

14 Months

Adverse event reporting additional description:

1 randomized subject in the control group was implanted by error with a real central catheter and was then transferred and treated as a high albumin + immunoglobulin subject. Therefore, this subject was considered for the evaluable population as control but moved to high albumin + immunoglobulin group for safety analysis.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 November 2011	<p>Protocol Version 1.5 was issued in November 2011 (12 subjects were enrolled in Spain only under this amendment) and implemented the following changes in study conduct (excluding administrative and typographical changes or clarifications to the protocol):</p> <ul style="list-style-type: none">• Revision of the control group and blinding technique following The Cochrane Library about the invasive “placebo” controls* to avoid the use of sham procedures* Cyna AM, Costi D, Middleton P. Randomised controlled trials using invasive ‘placebo’ controls are unethical and should be excluded from Cochrane Reviews [editorial]. The Cochrane Library 2011 (15 June).• Inclusion of Columbia-Suicide Severity Rating Scale (C-SSRS), Quality of Life AD Measure (QoL-AD) and Resource Utilization in Dementia (RUD-Lite©) Questionnaire• Update to timing for assessment of efficacy measurements from baseline (week -2 to -1), week 6, month 5, 8, 11 and 14 to baseline (week -2 to -1), intermediate visit (week 7-8), months 6, 9, 12 and 14.• Inclusion of Appendix 11 – STUDY SUMMARY TABLE AND STUDY FLOW CHART and modification of Appendix 3 - AUTO-C CLINICAL PROTOCOL
30 April 2012	<p>Protocol Version 1.6 was issued in April 2012 (after 12 subjects had been enrolled under the previous version, 6 new subjects were enrolled in Spain only under this amendment) and implemented the following changes in study conduct (excluding administrative and typographical changes or clarifications to the protocol):</p> <ul style="list-style-type: none">• Substitution of secondary efficacy variable Boston Naming Test (BNT) to Neuropsychological Assessment Battery Naming Test (NAB)• Update to Appendix 4 - REPORTING OF SERIOUS AND/OR UNEXPECTED AES, elimination of Appendix 5 - STUDY CONTACT INFORMATION• Update to inclusion criteria #3 related to include current stable treatment of memantine and for inclusion criteria #6 related to neuroimaging was clarified.• Extend timing for screening phase to 3 weeks; and provide time-window for FPE visits (window of ± 1 day), Intermediate visit (window of ± 2 days) and LVPE visits window of ± 5 days)• The number of scheduled MRI and FDG-PET assessments for brain structural changes was increased from 3 to 6.• Elimination of AD genetic markers (ApoE and presenilin), update laboratory parameters and AD biomarkers.

16 November 2012	<p>Protocol Version 1.7 was issued in November 2012 (after 18 subjects had been enrolled under the previous version, no new subjects were enrolled under this amendment) and implemented the following changes in study conduct (excluding administrative and typographical changes or clarifications to the protocol):</p> <ul style="list-style-type: none"> • Update to Appendix 3 – AUTO-C CLINICAL PROTOCOL and Appendix 4 – REPORTING OF SERIOUS AND/OR UNEXPECTED AES, elimination of Appendix 8 – SAMPLE INFORMED CONSENT TEMPLATE and Appendix 9 – SAMPLE CAREGIVER CONSENT TEMPLATE • Modification of Investigational Plan since the third group of treatment was changed from 1/3 of albumin dose (13 g) and IVIG (7 g) to albumin dose only group (20 g) • Clarification of exclusion criteria #1 (plasma exchange contraindications), #10 (uncontrolled high blood pressure), #12 (heart diseases), #16 (years of education) and #17 (stable treatment for behavioral disorders) • Update of safety assessments to include a chest X-ray to confirm the correct placement of the catheter; vital signs were assessed at 15-30 min before PE, during and 15-30 min after PE; addition of monitoring of subjects for number and type of bacterial infections requiring antibiotic, and addition of troponin assessment at screening and at each post-PE during intensive FPE period. • Update timing for primary criterion of safety (percentage of PE associated with at least one procedure-related AE) to be assessed within 72 hours after infusion completion (or after the infusion stops). • Incorporation of Data Monitoring Committee (DMC)
29 January 2013	<p>Amended Protocol Version 2.0 was issued in January 2013 (after 18 subjects had been enrolled under the previous version, 107 new subjects in Spain and US were enrolled under this amendment) and implemented the following changes in study conduct (excluding administrative and typographical changes or clarifications to the protocol):</p> <ul style="list-style-type: none"> • The planned enrollment was increased from 350 to 364 subjects to obtain an estimated sample size of 312 subjects (78 per treatment group) for evaluation. This sample size would provide joint power for the 2 co-primary endpoints (implemented in this protocol version; see below) of at least 90%. • Sham procedures mimicking plasmaphereses but with neither fluid exchange nor albumin or IVIG administration were implemented for the control group, following the same visit and assessment schedule used for the treated groups. The control group previously did not undergo these procedures and did not have visits or assessments during the intensive PE period (Weeks 1 to 6). • Exclusion criteria for uncontrolled high blood pressure (despite regular treatment during the previous 3 months) were increased from >140 to ≥160 mmHg (systolic) and from >90 to ≥100 mmHg (diastolic). • Change from baseline in ADCS-ADL inventory was added as a co-primary efficacy variable. • The number of scheduled MRI assessments for brain structural changes was decreased from 6 to 5. • The number of scheduled assessments for variation in FDG-PET patterns was decreased from 6 to 4. • aPTT was added to the scheduled laboratory assessments.

31 December 2015	<p>Amended Protocol Version 3.0 was issued in December 2015 (after 125 subjects had been enrolled under the previous versions, 222 new subjects in Spain and US were enrolled under this amendment) and implemented the following changes in study conduct (excluding administrative and typographical changes or clarifications to the protocol):</p> <ul style="list-style-type: none"> • Guidelines for sham procedures and management of hypovolemia, fever, and thromboembolic events were added. • The exclusion criterion for bradycardia was decreased from <60 to <55/min. • An exclusion criterion was added for subjects being treated with anticoagulants or antiplatelet therapy. • A provision was added that a person accompanying the subject for study procedures should not be in the same room in order to maintain the blind except in cases of agitated subjects. • Premedication with corticosteroids for IVIG administration was added as a permitted concomitant treatment. • ACEIs were added as prohibited concomitant treatments. • Sampling of plasma bags corresponding to each PE (FPE and LVPE) at selected sites was added. • Central interpretation of FDG-PET and MRI assessments was added. • The requirement for immediate notification of unexpected AEs was removed.
28 November 2017	<p>Amended Protocol Version 4.0 was issued in November 2017 (after 347 subjects had been enrolled under the previous versions, no new subjects were enrolled under this amendment) and implemented the following change in study conduct (excluding administrative and typographical changes or clarifications to the protocol):</p> <ul style="list-style-type: none"> • Sites performing LVPE were allowed to use devices based on the Aurora™ device (Fresenius Kabi, Bad Homburg, Germany) for the procedure. This device is an upgrade of the Auto-C device.
21 February 2018	<p>Amended Protocol Version 5.0 was issued in February 2018 in the US only, and administrative and typographical changes were implemented to the protocol. No changes to study conduct were specified, and no new subjects were enrolled under this amendment.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
