

Clinical trial results:

Multicenter, randomized, double-blind study to evaluate the safety and efficacy of tocilizumab (TCZ) in combination with methotrexate (MTX) versus switching to TCZ (placebo-controlled) in patients with active rheumatoid arthritis (RA) who have inadequately responded to prior MTX treatment and have achieved a low disease activity (DAS28 < 3.2) with TCZ in combination with MTX.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 March 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	14 March 2014
Global end of trial reached?	Yes
Global end of trial date	14 March 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Assess the maintenance of response in patients after switching to managed TCZ monotherapy compared with combination therapy continued TCZ and MTX.

Protection of trial subjects:

The investigator ensured that this study was conducted in full conformance with the principles of the "Declaration of Helsinki" or with the laws and regulations of the country in which the research was conducted, whichever afforded the greater protection to the individual. The study fully adhered to the principles outlined in "Guideline for Good Clinical Practice" ICH Tripartite Guideline or with local law if it afforded greater protection to the participant. For studies conducted in the EU/EEA countries, the investigator ensured compliance with the EU Clinical Trial Directive (2001/20/EC). For studies conducted in the USA or under US IND, the investigator additionally ensured adherence to the basic principles of "Good Clinical Practice" as outlined in the current version of 21 CFR, subchapter D, part 312, "Responsibilities of Sponsors and Investigators", part 50, "Protection of Human Subjects", and part 56, "Institutional Review Boards."

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 August 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 261
Worldwide total number of subjects	261
EEA total number of subjects	261

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	221
From 65 to 84 years	40
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 44 centers in Spain between 31 August 2011 and 14 March 2014.

Pre-assignment

Screening details:

A total of 264 subjects were screened of whom 1 was screen failure and 263 subjects were included. Two subjects were included but did not receive any treatment, hence they were excluded from all analysis.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Arms

Are arms mutually exclusive?	Yes
Arm title	TCZ plus (+) MTX (Non Randomized)

Arm description:

Participants received tocilizumab (TCZ) 8 milligrams per kilogram (mg/kg; maximum 800 mg) via intravenous (IV) infusion every 4 weeks (q4w) through Week 24 (total of 7 infusions). Participants also received MTX capsules orally, at a stable dose (10, 15, 17.5, or 20 mg, no maximum dose was defined) weekly from Week 1 through 16.

Arm type	Non-Randomized Arm
Investigational medicinal product name	Tocilizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

TCZ 8 mg/kg (maximum 800 mg) IV infusion q4w from Weeks 1 thorough 16 (total of 4 infusions).

Investigational medicinal product name	Methorexate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Methotrexate 10, 15, 17.5, or 20 mg capsules, administered orally once per week from Weeks 1 through 16.

Arm title	TCZ + MTX (Randomized)
------------------	------------------------

Arm description:

Participants received TCZ 8 mg/kg (maximum 800 mg) via IV infusion q4w through Week 24 (total of 7 infusions). Participants also received MTX capsules, orally, at a stable dose (10, 15, 17.5, or 20 mg/week, but no maximum dose was defined), weekly, from Weeks 1 through 24.

Arm type	Active comparator
Investigational medicinal product name	Tocilizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:	
TCZ 8 mg/Kg (maximum 800 mg) IV infusion q4w from Weeks 1 thorough 16 (total of 4 infusions).	
Investigational medicinal product name	Methorexate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Methotrexate 10, 15, 17.5, or 20 mg capsules, administered orally once per week from Weeks 1 through 16

Arm title	Tocilizumab + Placebo (Randomized)
------------------	------------------------------------

Arm description:

Participants received TCZ 8 mg/kg (maximum 800 mg) via IV infusion q4w through Week 24 (total of 7 infusions). Participants also received MTX capsules, orally, at stable dose (10, 15, 17.5, or 20 mg per week, but no maximum dose was defined) weekly, from Weeks 1 through 16 followed by matching placebo capsules, orally, weekly through Week 24.

Arm type	Experimental
Investigational medicinal product name	Tocilizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

TCZ 8 mg/Kg (maximum 800 mg) IV infusion q4w from Weeks 1 thorough 16 (total of 4 infusions).

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Placebo matched to Methotrexate 10, 15, 17.5, or 20 mg capsules, administered orally once per week from Weeks 1 through 16.

Primary: Change in Disease Activity Score Based on 28-Joint Count (DAS28) From Week 16 to Week 28

End point title	Change in Disease Activity Score Based on 28-Joint Count (DAS28) From Week 16 to Week 28 ^[1]
End point description: The DAS28 is a combined index for measuring disease activity in rheumatoid arthritis (RA). The index includes swollen (range 0-28) and tender (range 0-28) joint counts, acute phase response (erythrocyte sedimentation rate [ESR] in millimeters per hour [mm/hr]), and general health status (participant global assessment of disease activity using visual analog scale [VAS], range 1-100 mm). DAS28, which uses a 28-joint count, is derived from the original DAS, which includes a 44-swollen joint count. The DAS28 scale ranges from 0 to 10, where higher scores represent higher disease activity. Intent-to-treat (ITT) population: all randomized participants who received at least one dose of study medication and who had at least one efficacy measurement performed.	
End point type	Primary
End point timeframe: Baseline, Week 16, and Week 28	
Notes:	

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Data were planned to be analyzed only for those participants who were randomized as per protocol.

End point values	TCZ + MTX (Randomized)	Tocilizumab + Placebo (Randomized)

[11] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Data were planned to be analyzed only for those participants who were randomized as per protocol.

End point values	TCZ + MTX (Randomized)	Tocilizumab + Placebo (Randomized)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	82	81		
Units: units on a scale				
arithmetic mean (standard deviation)	2.71 (\pm 16.96)	2.85 (\pm 18.48)		

Statistical analyses

Statistical analysis title	TCZ+MTX vs. TCZ+Placebo
Comparison groups	TCZ + MTX (Randomized) v Tocilizumab + Placebo (Randomized)
Number of subjects included in analysis	163
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.655
Method	ANCOVA
Parameter estimate	Difference in LS Mean
Point estimate	-1.216
Confidence interval	
level	95 %
sides	2-sided
lower limit	-6.573
upper limit	4.141

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From Day 1 up to Week 36

Adverse event reporting additional description:

The data were planned per the protocol to be reported separately for pre-randomization period and post-randomization period.

Assessment type	Non-systematic

Reporting groups

Reporting group title	TCZ + MTX (Non Randomized)
-----------------------	----------------------------

Reporting group description:

Participants received TCZ 8 mg/kg (maximum 800 mg) via IV infusion q4w through Week 24 (total of 7 infusions). Participants also received MTX capsules orally, at a stable dose (10, 15, 17.5, or 20 mg, no maximum dose was defined) weekly from Week 1 through 16.

Reporting group title	TCZ + MTX (Pre-randomization)
-----------------------	-------------------------------

Reporting group description:

Participants received TCZ 8 mg/kg (maximum 800 mg) via IV infusion q4w up to Week 16 (total of 4 infusions). Participants also received MTX capsules, orally at a stable dose (10, 15, 17.5, or 20 mg/week but no maximum dose was set) weekly, up to Week 16. Participants with a response were randomized to receive TCZ and MTX in the second part of the study. Response was defined as participants having DAS28 score less than or equal to (\leq) 3.2.

Reporting group title	TCZ + Placebo (Pre-randomization)
-----------------------	-----------------------------------

Reporting group description:

Participants received TCZ 8 mg/kg (maximum 800 mg) via IV infusion q4w up to Week 16 (total of 4 infusions). Participants also received MTX capsules, orally at a stable dose (10, 15, 17.5, or 20 mg/week but no maximum dose was set) weekly, up to Week 16. Participants with a response were randomized to receive TCZ and matching MTX placebo in the second part of the study. Response was defined as participants having DAS28 score \leq 3.2.

Reporting group title	TCZ + MTX (Post-randomization)
-----------------------	--------------------------------

Reporting group description:

TCZ 8 mg/kg (maximum 800 mg) q4w via IV infusion up to Week 16 (total of 4 infusions). Participants also received MTX capsules, orally, at a stable dose (10, 15, 17.5, or 20 mg/week but no maximum dose was set) weekly, up to Week 16. Participants with a response were randomized to receive 3 additional IV infusions of TCZ 8 mg/kg between Week 16 and Week 24 and MTX capsules, orally, at a stable dose (10, 15, 17.5, or 20 mg per week, but no maximum dose was set), weekly through Week 24. Response was defined as participants having DAS28 score \leq 3.2.

Reporting group title	TCZ + Placebo (Post-randomization)
-----------------------	------------------------------------

Reporting group description:

TCZ 8 mg/kg (maximum 800 mg) q4w via IV infusion up to Week 16 (total of 4 infusions). Participants also received MTX capsules, orally, at a stable dose (10, 15, 17.5, or 20 mg/week but no maximum dose was set) weekly, up to Week 16. Participants with a response were randomized to receive 3 additional IV infusions of TCZ 8 mg/kg between Week 16 and Week 24 and matching placebo MTX capsules, orally, at a stable dose (10, 15, 17.5, or 20 mg per week, but no maximum dose was set), weekly through Week 24. Response was defined as participants having DAS28 score \leq 3.2.
