

Clinical trial results:

A multicentre open randomized phase II study of the efficacy and safety of azacitidine alone or in combination with lenalidomide in high-risk myeloid disease (high-risk MDS and AML) with a karyotype including del (5q)

Summary

EudraCT number	2011-001639-21
Trial protocol	SE FI NO DK
Global end of trial date	29 August 2020

Results information

Result version number	v1 (current)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 August 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	29 August 2017
Global end of trial reached?	Yes
Global end of trial date	29 August 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To study the efficacy of azacitidine with or without the addition of lenalidomide in high-risk MDS (IPSS Int-2 or high) and AML (multilineage dysplasia and 20-30% marrow blasts) with a karyotype including del(5q)

Protection of trial subjects:

For the experimental arm with azacitidine + lenalidomide there was a higher risk of infectious complications. To avoid this there was a possibility to add G-CSF treatment if neutrophils were low.

Background therapy:

All patients received the standard treatment for this group of patients with standard azacitidine.

Evidence for comparator:

Azacitidine is standard treatment for patients with both MDS and AML

Actual start date of recruitment	01 December 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	3 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Norway: 7
Country: Number of subjects enrolled	Sweden: 53
Country: Number of subjects enrolled	Denmark: 11
Country: Number of subjects enrolled	Finland: 1
Worldwide total number of subjects	72
EEA total number of subjects	72

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	21
From 65 to 84 years	51
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The patients were recruited between 7 March 2012 and 29 August 2017 in Sweden, Denmark, Norway and Finland.

Pre-assignment

Screening details:

The patients were screened during a 28 days period. There were 19 screen failures (8 patients with >30% blasts in the bone marrow, 6 patients with no 5q deletion, 2 patients with IPSS score intermediate 1, 2 patients with rapid progression and 1 patient due to patient request.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	azacitidine

Arm description:

Standard dose of azacitidine 5-2-2 (75 mg/m²/day subcutaneously¹²) with a total cycle length of 4 weeks and 6 cycles

Arm type	Active comparator
Investigational medicinal product name	azacitidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

azacitidine 5-2-2 (75 mg/m²/day subcutaneously¹²) with a total cycle length of 4 weeks

Arm title	azacitidine + lenalidomide
------------------	----------------------------

Arm description:

Standard dose of AZA 5-2-2 (75 mg/m²/day subcutaneously¹²) with a total cycle length of 4 weeks + lenalidomide 10 mg, oral, daily, 21/28 days, starting day one in each azacitidine cycle and leaving the last week free of treatment. If tolerated, the dose was escalated to 25 mg daily during cycle four to six.

Arm type	Experimental
Investigational medicinal product name	azacitidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

azacitidine 5-2-2 (75 mg/m²/day subcutaneously¹²) with a total cycle length of 4 weeks

Investigational medicinal product name	lenalidomide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

The initial dose of lenalidomide was 10 mg, oral, daily, 21/28 days, starting day one in each azacitidine cycle and leaving the last week free of treatment. If tolerated, the dose was escalated to 25 mg daily

during cycle four to six.

Number of subjects in period 1	azacitidine	azacitidine + lenalidomide
Started	36	36
Completed	21	19
Not completed	15	17
Treatment not started	3	-
Consent withdrawn by subject	-	2
Disease progression	6	2
Adverse Event	6	10
Did not start treatment	-	3

Statistical analyses

Statistical analysis title	Statistical evaluation of response
Statistical analysis description:	
Continuous data were described by mean and median (range) values depending on the distribution of data. 2- or Fisher's exact tests were used to measure the difference between responders and non-responders.	
Comparison groups	azacitidine v azacitidine + lenalidomide

Number of subjects included in analysis	66
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.62
Method	Fisher exact

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All AEs will be recorded by the Investigator(s) from the time the subject signs informed consent through the end of the designated follow-up period

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 November 2011	The approved CTA contains only one dose, 10 mg, of the comparator IMP, lenalidomide. According to the approved study protocol, a 25 mg dose of lenalidomide will also be used. The CTA has therefore been amended accordingly with a corrected MA number for the 10 mg
23 April 2012	The manufacturer of Lenalidomide has changed from Fischer to Almac and the package has changed from bottles to blisters, now available as a market product. The corresponding changes have been added to a revised CTA form (EudraCT v8).
13 June 2016	Due to slow inclusion rate we have decided during the last year to include patients who have had a maximum of 1 cycle of azacitidine before inclusion. So far every potential study object in that situation has been discussed with the study committee and noted as protocol violation in the CRF. In amendment 4 the exclusion criteria will be changed from: "Prior therapy with azacitidine" to "Prior therapy with >1 cycle of azacitidine".

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
