

# THE LANCET

## Diabetes & Endocrinology

### **Supplementary appendix**

This appendix formed part of the original submission and has been peer reviewed.  
We post it as supplied by the authors.

Supplement to: Parvanova A, Trillini M, Podestà M A, et al. Moderate salt restriction with or without paricalcitol in type 2 diabetes and losartan-resistant macroalbuminuria (PROCEED): a randomised, double-blind, placebo-controlled, crossover trial. *Lancet Diabetes Endocrinol* 2017; published online Nov 2. [http://dx.doi.org/10.1016/2213-8587\(17\)30359-5](http://dx.doi.org/10.1016/2213-8587(17)30359-5).

## Supplementary Methods

### *Diet prescription and monitoring*

The nutrient composition was flexible to accommodate individual preferences, but was designed to provide 45-50% of energy from carbohydrates, 30-35% from fat and 15-20% from proteins and to supply 100% of the daily recommended micronutrient intake, >20 g/day of fibres, and <300 mg/day of cholesterol to all study patients, independent of sodium diet allocation.<sup>7</sup> No particular life-style modification was introduced. Every month dietary adherence was verified by a dietician and natriuresis was measured in 24-hour urine collections. Salt intake goals were set together with the patients and in order to facilitate adherence, patient-dietician contact (in person, by telephone, or e-mail) was provided throughout the study period at each monthly evaluation of natriuresis and whenever deemed appropriate.

### *Additional measurements*

Samples were collected for possible explanatory analyses to be considered *a posteriori* to assess mechanisms possibly mediating the albuminuria/lowering effect, if any, of study treatments. Parameters considered for these potential, additional analyses included markers of the renin angiotensin system activity (plasma renin activity, plasma renin and pro-renin, angiotensin-II and aldosterone levels, 24-h urinary aldosterone excretion), brain natriuretic peptide (BNP) levels and markers of inflammation (serum C Reactive Protein levels, 24 hour urinary MCP-1, TGF Beta, and RANTES excretion). Pulse wave velocity and other markers of vascular stiffness were recorded, but were not analysed because of lack of treatment effect on pulse pressure (an indirect marker of vascular stiffness). For further details see study protocol at: [http://clintrials.marionegri.it/images/Trials/protocol\\_proceed.pdf](http://clintrials.marionegri.it/images/Trials/protocol_proceed.pdf), (accessed Sept 8, 2017).

## **Supplementary Results**

*PARICALCITOL VS PLACEBO ACCORDING TO STUDY PERIOD* – With low-sodium diet, albuminuria significantly decreased with both paricalcitol and placebo during the first study period (that is after randomisation, in parallel with sodium intake reduction). The opposite changes in albuminuria observed during the first study period between the two sodium intake groups on placebo ( $p < 0.01$ ) were fully blunted by paricalcitol (Supplementary Figure 2). During the second study period (that is after the cross-over, with patients on stable low or high-sodium intake), albuminuria did not change appreciably on placebo and showed a similar trend to decrease with paricalcitol in both diet groups. Changes in albuminuria (and in 24-hour UACR: data not shown) were significantly different between paricalcitol and placebo ( $p < 0.05$ ) in the low-sodium diet group (Supplementary Figure 2).

**Supplementary Table 1.** Primary and secondary outcomes according to sodium arms at baseline and different time points on follow up

Data are mean (SD) or median [IQR]. GFR = glomerular filtration rate. \*  $P < 0.05$ , \*\*  $P < 0.01$  versus pre-paricalcitol or pre-placebo. †  $P < 0.05$ , ††  $P < 0.01$  versus placebo. Normal Ranges: Serum Calcium: 8.7-10.3 mg/dl, Serum Phosphate: 2.3-4.7 mg/dl; Urinary Calcium Excretion: 100-300 mg/24-hours; Urinary Phosphate Excretion: 300-1000 mg/24-hours.

# STUDY DESIGN

Supplementary Figure 1

Supplementary Figure 2

Correlations between percent changes in 24-hour urinary sodium and albumin excretion at month 1 (Top Panel), month 2 (Middle Panel) and month 3 (Bottom Panel) vs baseline in patients randomised to high (black circles) or low (white circles) sodium intake considered as a whole. All correlations were highly significant. Abbreviations: UAE = urinary albumin excretion.

Supplementary Figure 3

Mean (SEM) percent changes in 24-hour systolic (Top Panel), diastolic (Middle Panel) and mean (Bottom Panel) BP during 1-month paricalcitol (black histograms) or placebo (dashed histograms) treatment in the low (Left Panel) and high (Right Panel) sodium diet groups considered separately. Abbreviations: BP = blood pressure.

## First Treatment Period

## Second Treatment Period

Supplementary Figure 4

Median (IQR) percent changes in 24-hour urinary albumin excretion in the first study period immediately after randomisation (Top Panel) and in the second study period immediately after the cross-over (Bottom Panel) during 1-month paricalcitol (continuous bars) or placebo (dotted bars) treatment in the low (Left Panel) and high (Right Panel) sodium diet groups considered separately. Abbreviations: UAE = urinary albumin excretion.

## **PROCEED Study Organization**

Members of the PROCEED Study Organization were as follows (all in Italy unless otherwise noted): *Principal Investigator* – N. Perico (IRCCS Mario Negri Institute for Pharmacological Research); *Scientific Study Co-ordinators* – P. Ruggenenti, G. Remuzzi (IRCCS Mario Negri Institute for Pharmacological Research); *Coordinating centre* - IRCCS Mario Negri Institute for Pharmacological Research, Clinical Research Centre for Rare Diseases Aldo e Cele Daccò, Villa Camozzi, Ranica (Bergamo); *Participating centres* – S. Rota, N. Perico, M. Trillini, B. Ruggiero, C. Aparicio, S. Prandini, D. Cugini, G. Gherardi, M.A. Podestà (IRCCS Mario Negri Institute for Pharmacological Research, Clinical Research Centre for Rare Diseases Aldo e Cele Daccò, Villa Camozzi, Ranica, BG); R. Trevisan, A. Corsi, C. Aparicio (UO Malattie Endocrine e Diabetologia - ASST Papa Giovanni XXIII Bergamo, BG); A.C. Bossi, A. Parvanova, IP Iliev, S Yakyinchuk (UOC Malattie Endocrine e Centro Regionale per il Diabete Mellito - ASST Bergamo Ovest - Ospedale Treviglio-Caravaggio, Treviglio, BG); A.C. Bossi, I. Petrov Iliev, V. Lecchi (UOC Malattie Endocrine e Centro Regionale per il Diabete Mellito - ASST Bergamo Ovest - Ospedale SS. Trinità, Romano di Lombardia, BG); A. Belviso, M. Trillini, S. Yakymchuk (ASST Bergamo Ovest - Poliambulatorio Extra Ospedaliero Brembate Sopra, BG); R. Mangili (Unità Medicina Generale - ASST Bergamo Est - Ospedale Bolognini Seriate, BG); *Monitoring and data validation* – N. Rubis, W. Calini, O. Diadei (IRCCS Mario Negri Institute for Pharmacological Research, Clinical Research Center for Rare Diseases Aldo e Cele Daccò, Villa Camozzi, Ranica, BG); *CRF and Database* – B. Ene-Iordache, S. Carminati, D. Martinetti (IRCCS Mario Negri Institute for Pharmacological Research, Clinical Research Center for Rare Diseases Aldo e Cele Daccò, Villa Camozzi, Ranica, BG); *Treatment Assignment Secretariat* – G.A. Giuliano (IRCCS Mario Negri Institute for Pharmacological Research, Clinical Research Center for Rare Diseases Aldo e Cele Daccò, Villa Camozzi, Ranica, BG); *Data Analysis* – A. Perna, F. Peraro, A. Russo (IRCCS Mario Negri Institute for Pharmacological Research, Clinical Research Center for Rare Diseases Aldo e Cele Daccò, Villa Camozzi, Ranica, BG); *Laboratory Measurements* – F. Gaspari, F. Carrara, S. Ferrari, N. Stucchi, A. Cannata (IRCCS Mario Negri Institute for Pharmacological Research, Clinical Research Center for Rare Diseases Aldo e Cele Daccò, Villa Camozzi, Ranica, BG); *Regulatory Affairs* – P. Boccardo, S. Peracchi (IRCCS Mario Negri Institute for Pharmacological Research, Clinical Research Center for Rare Diseases Aldo e Cele Daccò, Villa Camozzi, Ranica, BG);

## **Scientific Writing Academy (SWA) 2016**

Tutor: M. de Borst (Holland). Participants: S Bettoni, I. Cattaneo, D.G. Franchina (UK), H.A. Ha Phan (Vietnam), G. Igiraneza (Rwanda), T. Kaucsár (Hungary), S.L. Lima (Tenerife, Spain), M. Lunney (Canada), M.A. Podestà, H. Tran (Vietnam), and M. Trillini. SWA is a project sponsored by IRCCS Istituto di Ricerche Farmacologiche Mario Negri (Bergamo, Italy) and endorsed by the International Society of Nephrology that aims to teach the tools necessary to succeed in publishing scientific papers in international journals to researchers and physicians from all over the world.
