Clinical trial results:
A multi-center, randomized, double-blind, placebo-controlled study to evaluate the efficacy and safety of Certolizumab Pegol in combination with Methotrexate for inducing and sustaining clinical response in the treatment of DMARD-Naïve adults with early active Rheumatoid Arthritis

Summary

EudraCT number	2011-001729-25
Trial protocol	BE DE IE HU ES CZ AT SE NL IT GB
Global end of trial date	10 September 2015

Results information

Result version number	v4 (current)
This version publication date	17 September 2016
First version publication date	24 July 2015

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 October 2015
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	10 September 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to demonstrate that both CZP + MTX dosing frequencies (the standard maintenance dose CZP 200 mg every 2 weeks + MTX and the reduced frequency maintenance dose CZP 200 mg every 4 weeks + MTX) are superior to PBO + MTX in maintaining subjects in LDA at Week 104

Protection of trial subjects:

Not applicable

Background therapy:

Not applicable

Evidence for comparator:

Not applicable

Actual start date of recruitment	25 January 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 16
Country: Number of subjects enrolled	Australia: 19
Country: Number of subjects enrolled	Belgium: 19
Country: Number of subjects enrolled	Colombia: 13
Country: Number of subjects enrolled	Czech Republic: 26
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	Germany: 40
Country: Number of subjects enrolled	Hungary: 16
Country: Number of subjects enrolled	Ireland: 3
Country: Number of subjects enrolled	Italy: 5
Country: Number of subjects enrolled	Mexico: 14
Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	Poland: 77
Country: Number of subjects enrolled	Romania: 3
Country: Number of subjects enrolled	Spain: 11
Country: Number of subjects enrolled	Sweden: 6
Country: Number of subjects enrolled	Switzerland: 2
Country: Number of subjects enrolled	United Kingdom: 10
Country: Number of subjects enrolled	United States: 71

Worldwide total number of subjects	357
EEA total number of subjects	222

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	312
From 65 to 84 years	45
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study started to enroll subjects in January 2012.

Pre-assignment

Screening details:

Participant Flow refers to the Safety Set 2 (SS2) which consists of all subjects randomized into Period 1 who had received at least 1 dose of study medication (CZP/PBO) in Period 2.

Period 1

Period 1 title	Period 2 (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	PBO+MTX / PBO+MTX

Arm description:

Placebo (PBO) + Methotrexate (MTX) in Period 1

1 syringe PBO every 2 Weeks + MTX in Period 2

Arm type	Placebo non-comparator
Investigational medicinal product name	Methotrexate
Investigational medicinal product code	MTX
Other name	Trexan
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

A dose of at least 15 mg per Week had to be taken to remain in the study. MTX was given every week from Week 52 onwards until Week 103

Investigational medicinal product name	Placebo
Investigational medicinal product code	PBO
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injections every 2 Weeks or every 4 Weeks

Arm title	CZP+MTX / PBO+MTX

Arm description:

Certolizumab pegol (CZP) 200 mg Q2W + Methotrexate (MTX) in Period 1

1 syringe PBO every 2 Weeks + MTX in Period 2

Arm type	Placebo
Investigational medicinal product name	Certolizumab pegol
Investigational medicinal product code	CZP
Other name	Cimzia
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injections: 200 mg every 2 Weeks or every 4 Weeks

Investigational medicinal product name	Methotrexate
Investigational medicinal product code	MTX
Other name	Trexan
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

A dose of at least 15 mg per Week had to be taken to remain in the study. MTX was given every week from Week 52 onwards until Week 103

Investigational medicinal product name	Placebo
Investigational medicinal product code	PBO
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injections every 2 Weeks or every 4 Weeks

Arm title	CZP+MTX / CZP Q4W+MTX

Arm description:

Certolizumab pegol (CZP) 200 mg Q2W + Methotrexate (MTX) in Period 1

1 syringe 200 mg Certolizumab pegol (CZP) every 4 Weeks/ 1 syringe Placebo (PBO) every 4 Weeks (CZP and PBO administration to be staggered 2 weeks apart to maintain blind) + MTX in Period 2

Arm type	Experimental
Investigational medicinal product name	Methotrexate
Investigational medicinal product code	MTX
Other name	Trexan
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

A dose of at least 15 mg per Week had to be taken to remain in the study. MTX was given every week from Week 52 onwards until Week 103

Investigational medicinal product name	Certolizumab pegol
Investigational medicinal product code	CZP
Other name	Cimzia
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injections: 200 mg every 2 Weeks or every 4 Weeks

Arm title	CZP+MTX / CZP Q2W+MTX

Arm description:

Certolizumab pegol (CZP) 200 mg Q2W + Methotrexate (MTX) in Period 1

1 syringe 200 mg Certolizumab pegol (CZP) every 2 Weeks + MTX in Period 2

Arm type	Experimental
Investigational medicinal product name	Methotrexate
Investigational medicinal product code	MTX
Other name	Trexan
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

A dose of at least 15 mg per Week had to be taken to remain in the study. MTX was given every week from Week 52 onwards until Week 103

Investigational medicinal product name	Certolizumab pegol
Investigational medicinal product code	CZP
Other name	Cimzia
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injections: 200 mg every 2 Weeks or every 4 Weeks

Statistical analyses

Statistical analysis title	Statistical Analysis 1

Statistical analysis description:

In order to control the overall study-wise Type I error rate at 5 %, hypothesis testing was performed in a hierarchical order beginning with the CZP standard maintenance dosing (200 mg Q2W) + MTX group vs the CZP stopped dosing (PBO) + MTX group. If this analysis was statistically significant at the alpha = 0.05 level, an additional comparison of the CZP reduced frequency dosing (200 mg Q4W) + MTX group vs the CZP stopped dosing + MTX group was performed with testing at the alpha = 0.05 level

Comparison groups	CZP+MTX / PBO+MTX (Full Analysis Set) v CZP+MTX / CZP Q2W+MTX (Full Analysis Set)
Number of subjects included in analysis	163

Secondary: Percentage of subjects with Disease Activity Score 28 [ESR] (DAS28 [ESR]) < 2.6 at Week 52 in previous study RA0055 Period 1 who maintain a DAS28 [ESR] < 2.6 from Week 52 in RA0055 Period 1 through Week 104 in RA0055 Period 2 without flaring

End point title	Percentage of subjects with Disease Activity Score 28 [ESR] (DAS28 [ESR]) < 2.6 at Week 52 in previous study RA0055 Period 1 who maintain a DAS28 [ESR] < 2.6 from Week 52 in RA0055 Period 1 through Week 104 in RA0055 Period 2 without flaring

End point description:

DAS28[ESR] is calculated using the Tender Joint Count (TJC), Swollen Joint Count (SJC) Erythrocyte Sedimentation Rate (ESR in mm/hour), and the Patient's Global Assessment of Disease Activity - Visual Analog Scale (PtGADA-VAS in mm) using the following formula: 0.56 x √(TJC) + 0.28 x √(SJC) + 0.70 x lognat (ESR) + 0.014 x PtGADA, where 28 joints are examined and a lower score indicates less disease activity.

End point description:

Joint space narrowing (JSN) was assessed in 15 locations per hand and 6 locations per foot. Joint space narrowing for each location was scored from 0 to 4, with 0 indicating no narrowing. The maximum possible score for JSN in all 30 hand joints was 120. The maximum possible score for JSN in all 12 feet joints was 48. Thus, the maximum possible total JSN score for Hands and feet was 168.

End point description:

BRAF-MDQ total score ranges from 0 to 70 (with higher scores indicating worse fatigue), whereas the score for each dimension is different due to the varied number of questions (0 –22 for physical, 0- 21 for living, 0- 15 for cognition, and 0- 12 for emotion). A negative value in BRAF-MDQ change from Baseline indicates an improvement from Baseline.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events for Period 2 were collected from the date of the Week 52 study medication up to 70 days after the last (most recent) Certolizumab pegol (CZP) or Placebo (PBO) dose

Adverse event reporting additional description:

For the safety results, the main comparisons of interest are across the 3 CZP re-randomized groups; the PBO+MTX/PBO+MTX group is included for completeness.
For subjects induced/ re-induced with CZP due to flare, only AEs up to the time of induction/re-induction with CZP are included. Note that 3 SAEs occurred after induction/ re-induction.

Assessment type	Non-systematic

subjects affected / exposed	0 / 83 (0.00%)		
occurrences causally related to treatment / all	0 / 0		
deaths causally related to treatment / all	0 / 0		

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.
Justification: Only subjects who were induced/re-induced with CZP in Period 2 due to flare are included.

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.
Justification: Only subjects who were induced/re-induced with CZP in Period 2 due to flare are included.

[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.
Justification: Only subjects who were induced/re-induced with CZP in Period 2 due to flare are included.

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	PBO+MTX / PBO+MTX	CZP+MTX / PBO+MTX	CZP+MTX / CZP Q4W+MTX
Total subjects affected by non-serious adverse events			
subjects affected / exposed	3 / 66 (4.55%)	13 / 81 (16.05%)	32 / 127 (25.20%)
Infections and infestations			
Urinary tract infection			
alternative dictionary used: MedDRA 17.0			
alternative assessment type: Systematic			
subjects affected / exposed	1 / 66 (1.52%)	2 / 81 (2.47%)	4 / 127 (3.15%)
occurrences (all)	1	2	4
Nasopharyngitis			
subjects affected / exposed	0 / 66 (0.00%)	5 / 81 (6.17%)	13 / 127 (10.24%)
occurrences (all)	0	5	15
Pharyngitis			
subjects affected / exposed	0 / 66 (0.00%)	5 / 81 (6.17%)	5 / 127 (3.94%)
occurrences (all)	0	5	5
Latent tuberculosis			

subjects affected / exposed	0 / 66 (0.00%)	0 / 81 (0.00%)	7 / 127 (5.51%)
occurrences (all)	0	0	7
Metabolism and nutrition disorders			
Hypercholesterolaemia			
subjects affected / exposed	2 / 66 (3.03%)	3 / 81 (3.70%)	8 / 127 (6.30%)
occurrences (all)	3	3	8

Non-serious adverse events	CZP+MTX / CZP Q2W+MTX		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	13 / 83 (15.66%)		
Infections and infestations			
Urinary tract infection			
alternative dictionary used: MedDRA 17.0			
alternative assessment type: Systematic			
subjects affected / exposed	5 / 83 (6.02%)		
occurrences (all)	9		
Nasopharyngitis			
subjects affected / exposed	4 / 83 (4.82%)		
occurrences (all)	4		
Pharyngitis			
subjects affected / exposed	2 / 83 (2.41%)		
occurrences (all)	2		
Latent tuberculosis			
subjects affected / exposed	1 / 83 (1.20%)		
occurrences (all)	1		
Metabolism and nutrition disorders			
Hypercholesterolaemia			
subjects affected / exposed	2 / 83 (2.41%)		
occurrences (all)	3		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 July 2012	At the time of Global Protocol Amendment 1 (27 Jul 2012), enrollment was ongoing. The main change covered in this amendment was the incorporation of the updated UCB tuberculosis (TB) detection and monitoring policy. The recent changes in national guidelines recommended different TB testing (QuantiFERON®-TB GOLD test or purified protein derivative [PPD] Skin test) as the preferred test in a number of geographies. Therefore, this amendment offered the option for Investigators to stay within local guidelines and regulations. Also, some national guidelines were recommending different protocols of prophylactic treatment for latent TB. Thus, this amendment addressed these changes and gave Investigators the possibility to be compliant with current guidelines and regulations. Several other minor changes and clarifications were incorporated into Global Protocol Amendment 1. Those affecting study conduct included: - Stipulation for contraception use was extended from 10 weeks to at least 3 months (USA/Canada) or 6 months (Europe, Australia, and Latin America) after the last dose of study treatment. Similarly, the exclusion criterion was extended from 10 weeks to 6 months for female subjects who were breastfeeding, pregnant, or planned to become pregnant during the study or within 6 months following last dose of study treatment. - The Screening Period length was clarified. - MTX packaging and labeling were clarified. - Rescreening of subjects was clarified.
06 February 2013	At the time of Global Protocol Amendment 2 (06 Feb 2013), enrollment was ongoing. The main changes covered in this amendment were: - The PBO+MTX arm of Period 1 was prolonged in Period 2 until Week 104 to provide subjects extended treatment benefit with the treatment combination PBO+MTX. These subjects were in sustained LDA when reaching Week 52 and the subjects have at any time a rescue option available when they flare providing them the initiation of a CZP treatment and a maintenance on CZP until Week 104. - The prolongation of the PBO+MTX arm in Period 2 provided a higher protection of the Period 1 blind by allowing more time to clean the large amount of study data generated. - The prolongation of the PBO+MTX arm in Period 2 provided, as a consequence, additional exploratory data and allowed comparison of the outcomes of an initial treatment with or without CZP in Period 1 over a longer time. - Following the Statistical Analysis Plan (SAP) development, some updates were considered in the statistical section. - PBO+MTX nomenclature was replaced by MTX+CZP stopped dosing in sections related to Period 2. - The serious AE (SAE) reporting details were changed, an e-mail address was added. All other safety-related questions were to be addressed to the Study Physician or Medical Monitors assigned to the study.
13 January 2014	At the time of Global Protocol Amendment 3 (13 Jan 2014), all subjects were enrolled. The main changes covered in this amendment were: - TB language was expanded to reflect current UCB guidelines. - Additional endpoints in Period 1 and Period 2 and associated analyses of minimum clinically important differences (MCID) from Baseline in various assessment tools were added. - A change in wording in laboratory analyses from inorganic phosphorous to phosphorous. - Clarification on PK analyses was made to include CZP moiety analyses. - Additional subgroups of age, rheumatoid factor (RF), albumin, and presence of erosions at Baseline were considered for analyses. - Predictability analyses were added. - A Completer Set for Period 1 and associated sensitivity analyses were added. - Details on multiple comparisons/multiplicity were added.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
