Clinical trial results:

A Multicenter, Randomized, Double-Blind, Active-Controlled, Phase 3 Study to Evaluate the Efficacy and Safety of TAK-875 25 mg and 50 mg Compared to Glimepiride When Used in Combination with Metformin in Subjects with Type 2 Diabetes

Paediatric regulatory details

5 /	
Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage	
Analysis stage	Final
Date of interim/final analysis	17 December 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	24 April 2014
Was the trial ended prematurely?	Yes
Notes:	

General information about the trial

Main objective of the trial:

To evaluate the efficacy of TAK-875 plus metformin compared to glimepiride plus metformin on glycemic control as assessed by change from baseline in glycosylated hemoglobin (HbA1c) at Weeks 78 and 104.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 November 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1931
From 65 to 84 years	523
85 years and over	0

Recruitment

Recruitment details:

Subjects took part at 291 sites in Argentina, Australia, Bulgaria, Canada, Colombia, Czech Republic, Estonia, Hong Kong, Israel, Latvia, Lithuania, Malaysia, Mexico, New Zealand, Philippines, Poland, Romania, the Russian Federation, South Africa, Taiwan, Ukraine, the United Kingdom and the United States from 06 November 2011 to 24 April 2014.

Pre-assignment

Screening details:

Subjects with a historical diagnosis of type 2 diabetes mellitus who were inadequately controlled while receiving metformin alone were enrolled in 1 of 3 treatment groups as follows: glimepiride; TAK-875 25 milligram (mg); TAK-875 50 mg.

Period 1		
Period 1 title	Overall study (overall period)	
Is this the baseline period?	Yes	
Allocation method	Randomised - controlled	
Blinding used	Double blind	
Roles blinded	Subject, Investigator, Carer, Assessor	
A 1/1/10 0		

Arms

Are arms mutually exclusive?	Yes
Arm title	Glimepiride

Arm description:

TAK-875 placebo-matching tablets, orally, once daily and glimepiride 1 mg, over-encapsulated capsules, orally, once daily for 1 week followed by up-titration in 2 mg increments up to 6 mg, orally, once daily along with metformin greater than or equal to (>=)1500 mg per day or maximum tolerated dose, tablets, orally for up to 104 weeks. Glimepiride dose could be down-titrated from 6 mg in case of recurrent or severe hypoglycemia.

Arm type	Active comparator
Investigational medicinal product name	Glimepiride
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Glimepiride 1 mg, over-encapsulated capsules, orally, once daily for 1 week followed by up-titration in 2 mg increments up to 6 mg, orally, once daily for up to 104 weeks. Glimepiride dose could be down-titrated from 6 mg in case of recurrent or severe hypoglycemia.

Dispersion value	0.678

Notes:

[7] - The testing procedure at 2-sided significance level of 0.025 was as follows: 1) TAK-875 25 mg vs. glimepiride, 2) TAK-875 50 mg vs. glimepiride. If P-value was not greater than 0.025 at Step 1, then Step 2 was carried out.

Secondary: Change From Baseline in HbA1c at Weeks 26 and 52

Change From Baseline in fibric at weeks 26 and 52	End point title	Change From Baseline in HbA1c at Weeks 26 and 52
---	-----------------	--

End point description:

The change in the value of HbA1c collected at Weeks 26 and 52 relative to baseline. FAS included all randomized subjects who received at least 1 dose of double-blind study medication and who had a baseline and at least 1 post- baseline value during the double-blind treatment period.

Secondary: Change From Baseline in Fasting Plasma Glucose at Weeks 26, 52, 78 and 104

End point title	Change From Baseline in Fasting Plasma Glucose at Weeks 26,
	52, 78 and 104

End point description:

The change between the fasting plasma glucose value to be collected at Weeks 26, 52, 78 and 104 relative to baseline. FAS included all randomized subjects who received at least 1 dose of double-blind study medication and who had a baseline and at least 1 post- baseline value during the double-blind treatment period. Here "99999" in the mean and standard deviation values signifies not estimable (NA), since none of the subjects had data for the arm "Glimepiride" at given time.

End point type	Secondary
End point timeframe:	
Baseline and Weeks 26, 52, 78 and 104

Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent adverse events are adverse events started after first dose of study drug and no more than 30 days for a serious adverse event after the last dose of study drug. Time of individual subject follow-up ranged from 1 to 735 days.

Adverse event reporting additional description:

At each visit the investigator had to document any occurrence of adverse events and abnormal laboratory findings. Any event spontaneously reported by the subject or observed by the investigator was recorded, irrespective of the relation to study treatment.

Assessment type	Systematic

Reporting groups

Reporting group title	Glimepiride

Reporting group description:

TAK-875 placebo-matching tablets, orally, once daily and glimepiride 1 mg, over-encapsulated capsules, orally, once daily for 1 week followed by up-titration in 2 mg increments up to 6 mg, orally, once daily along with metformin >=1500 mg per day or maximum tolerated dose, tablets, orally for up to 104 weeks. Glimepiride dose could be down-titrated from 6 mg in case of recurrent or severe hypoglycemia.

Reporting group title TAK-875 25 mg

Reporting group description:

TAK-875 25 mg, tablets, orally, once daily and glimepiride placebo-matching capsules, orally, once daily along with metformin >=1500 mg per day or maximum tolerated dose, tablets, orally for up to 104 weeks.

Reporting group title

	TAK-8	375	50	mg
--	-------	-----	----	----

Reporting group description:

TAK-875 50 mg, tablets, orally, once daily and glimepiride placebo-matching capsules, orally, once daily along with metformin >=1500 mg per day or maximum tolerated dose, tablets, orally for up to 104 weeks.

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
31 May 2012	 1- Secondary objective was modified by adding measures including incidence of hypoglycemic events, change from baseline in body weight and change from baseline in HbA1c at specific time points. 2- Period of evaluation was changed from 118 weeks to 118-122 weeks in schedule B subjects (on a lower metformin daily dose (<1500 mg) with no documentation of MTD. 3- Provided additional guidance for investigators to be actively engaged in identifying and reporting subjects with potential cardiovascular (CV) events for the study and to clarify reporting procedures for non-serious CV events.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
26 December 2013	Due to specific liver- related safety signals that emerged in the phase 3 program, Takeda concluded that based on all available information, the benefits of treating subjects with fasiglifam do not outweigh the potential risks, thus Takeda decided voluntarily to terminate all development activities for fasiglifam based on liver safety concerns.	-

Notes:

Limitations and caveats

None reported
