Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	23 February 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 February 2015
Global end of trial reached?	No

Notes:

## General information about the trial

Main objective of the trial:

This Phase 2b, randomised, double-blind, placebo-controlled, parallel group, dose-ranging, multicentre study evaluated subjects with moderate to severe active Crohn's disease. The primary objective of the study was to evaluate the dose-response of tofacitinib in inducing clinical remission in subjects with moderate to severe Crohn's disease and to select effective dose(s). Secondary objectives were to evaluate the safety and tolerability of tofacitinib induction therapy, to evaluate the dose-response of tofacitinib in inducing clinical response, to characterize the pharmacokinetics (PK) of tofacitinib, to evaluate the effect of tofacitinib on quality of life, and to evaluate the effect of tofacitinib on C-reactive protein (CRP) and fecal calprotectin, all in subjects with moderate to severe Crohn's disease.

Protection of trial subjects:

This study was conducted in compliance with the ethical principles originating in or derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. In addition, all local regulatory requirements were followed, in particular, those affording greater protection to the safety of trial participants.

The final protocol and any amendments were reviewed and approved by the Institutional Review Board(s) (IRB) and/or Independent Ethics Committee(s) (IEC) at each of the investigational centres participating in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 October 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 10
Country: Number of subjects enrolled	Austria: 5
Country: Number of subjects enrolled	Bulgaria: 5
Country: Number of subjects enrolled	Canada: 14
Country: Number of subjects enrolled	Czech Republic: 3
Country: Number of subjects enrolled	France: 8
Country: Number of subjects enrolled	Germany: 18
Country: Number of subjects enrolled	Greece: 2
Country: Number of subjects enrolled	Hungary: 28
Country: Number of subjects enrolled	Israel: 8
Country: Number of subjects enrolled	Japan: 16
Country: Number of subjects enrolled	Korea, Republic of: 15
Country: Number of subjects enrolled	Netherlands: 9
Country: Number of subjects enrolled	South Africa: 4
Country: Number of subjects enrolled	Spain: 21

Country: Number of subjects enrolled	Ukraine: 10
Country: Number of subjects enrolled	United States: 103
Worldwide total number of subjects	279
EEA total number of subjects	99

Notes:

---

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	273
From 65 to 84 years	6
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Screening confirmed documented clinical diagnosis of Crohn's disease (for at least 6 months prior), QuantiFERON® tuberculosis Gold test/chest radiograph, colonoscopy, magnetic resonance imaging & satisfactory laboratory, vital sign, physical examination & 12-lead electrocardiogram results within 1 to 3 weeks prior to Day 1.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Placebo tablets to match tofacitinib 5 milligrams (mg) for oral administration twice daily (BID) for 8 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo for Tofacitinib (CP-690550)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo tablets to match tofacitinib for oral administration BID for 8 weeks.

<b>Arm title</b>	Tofacitinib 5 mg BID
------------------	----------------------

Arm description:

Tofacitinib tablets for oral administration at a dose of 5 mg BID for 8 weeks.

Arm type	Experimental
Investigational medicinal product name	Tofacitinib (CP-690550)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

One 5 mg tofacitinib tablet for oral administration BID for 8 weeks.

<b>Arm title</b>	Tofacitinib 10 mg BID
------------------	-----------------------

Arm description:

Tofacitinib tablets for oral administration at a dose of 10 mg BID for 8 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Tofacitinib (CP-690550)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Two 5 mg tofacitinib tablets for oral administration BID for 8 weeks.

<b>Arm title</b>	Tofacitinib 15 mg BID
------------------	-----------------------

Arm description:

Tofacitinib tablets for oral administration at a dose of 15 mg BID for 8 weeks.

Arm type	Experimental
Investigational medicinal product name	Tofacitinib (CP-690550)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Three 5 mg tofacitinib tablets for oral administration BID for 8 weeks.

<b>Number of subjects in period 1</b>	Placebo	Tofacitinib 5 mg BID	Tofacitinib 10 mg BID
Started	91	86	86

### Primary: Percentage of Participants in Clinical Remission (as Defined by a Crohn's Disease Activity Index [CDAI] Score of Less Than [ $<$ ] 150 Points) at Week 8

End point title	Percentage of Participants in Clinical Remission (as Defined by a Crohn's Disease Activity Index [CDAI] Score of Less Than [ $<$ ] 150 Points) at Week 8 <sup>[1]</sup>
End point description: Clinical remission was a CDAI $<$ 150 points. CDAI is a composite index consisting of a weighted scoring of 8 disease variables: number of liquid or very soft stools, extent of abdominal pain, general well-being, occurrence of extra-intestinal symptoms, need for antidiarrheal drugs, presence of abdominal masses, hematocrit, and body weight. CDAI score was based partly on entries (7 days before evaluation) from participant's diary kept while on study. CDAI scores range from 0 to approximately 600, higher score indicates higher disease activity. The 15 mg BID treatment group was closed to further enrolment early on in the study by Protocol Amendment 5 after only 16 participants were enrolled into this group. Therefore, the efficacy analysis was not performed for this group because the results may be difficult to interpret due to the small sample size.	
End point type	Primary
End point timeframe: Week 8	

#### Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The 15 mg BID treatment group was closed to further enrolment early on in the study by Protocol Amendment 5 after only 16 participants were enrolled into this group. Therefore, the efficacy analysis was not performed for this group because the results may be difficult to interpret due to the small sample size.

**Secondary: Tofacitinib Plasma Concentrations from 0 to 2 hours Post Dose on Day 1 and at Week 8/Early Termination (ET) Visit**

End point title	Tofacitinib Plasma Concentrations from 0 to 2 hours Post Dose on Day 1 and at Week 8/Early Termination (ET) Visit <sup>[6]</sup>
-----------------	----------------------------------------------------------------------------------------------------------------------------------

End point description:

Plasma samples were collected from participants for the determination of tofacitinib concentrations. Only samples from tofacitinib-treated participants were subsequently analyzed. Plasma concentration data are summarized by nominal sample collection times specified in the protocol, and actual sample collection times may be different. 9999 indicates number of observations above the lower limit of quantification equals (=) 0.

End point type	Secondary
----------------	-----------

End point timeframe:

Pre-dose, 20 minutes, 40 minutes, 1 hour, and 2 to 3 hours post-dose on Day 1 and Week 8/ET visit

Notes:

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Only participants from "Tofacitinib" treatment arms were planned to be analysed for this end point.

### Secondary: EuroQoL 5 Dimensions Questionnaire (EQ-5D) Utility Scores at Baseline and Week 8/ET Visit

End point title	EuroQoL 5 Dimensions Questionnaire (EQ-5D) Utility Scores at Baseline and Week 8/ET Visit
-----------------	-------------------------------------------------------------------------------------------

---

**End point description:**

EQ-5D is a participant rated questionnaire to assess health-related QoL in terms of a single utility score. Health State Profile component assesses level of current health for 5 domains: mobility, self-care, usual activities, pain and discomfort, and anxiety and depression; 1 indicates better health state (no problems); 3 indicates worst health state ("confined to bed"). Scoring formula developed by EuroQol Group assigns a utility value for each domain in the profile. Score is transformed and results in a total score range from -0.594 to 1.000; a higher score indicates a better health state.

Number of Subjects Analysed is the maximum number of participants with non-missing data.

Notes:

[10] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The 15 mg BID treatment group was closed to further enrolment early on in the study by Protocol Amendment 5 after only 16 participants were enrolled into this group. Therefore, the efficacy analysis was not performed for this group because the results may be difficult to interpret due to the small sample size.

End point values	Placebo	Tofacitinib 5 mg BID	Tofacitinib 10 mg BID	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	84	84	80	
Units: Score on a Scale				
arithmetic mean (standard error)	0.08 (± 0.029)	0.14 (± 0.03)	0.16 (± 0.03)	

## Statistical analyses

No statistical analyses for this end point

## Secondary: EQ-5D Visual Analogue Scale (VAS) Scores at Baseline and Week 8/ET Visit

End point title	EQ-5D Visual Analogue Scale (VAS) Scores at Baseline and Week 8/ET Visit
End point description: EQ-5D is a participant rated questionnaire to assess health-related QoL in terms of a single index value. The VAS component rates current health state on a scale from 0 millimeters (mm) (worst imaginable health state) to 100 mm (best imaginable health state); higher scores indicate a better health state. Number of Subjects Analysed is the maximum number of participants with non-missing data.	
End point type	Secondary
End point timeframe: Baseline, Week 8/ET visit	

End point values	Placebo	Tofacitinib 5 mg BID	Tofacitinib 10 mg BID	Tofacitinib 15 mg BID

## Secondary: Change from Baseline EQ-5D VAS Scores at Week 8/ET Visit Using ANCOVA

End point title	Change from Baseline EQ-5D VAS Scores at Week 8/ET Visit Using ANCOVA <sup>[11]</sup>
End point description: EQ-5D is a participant rated questionnaire to assess health-related QoL in terms of a single index value. The VAS component rates current health state on a scale from 0 millimeters (mm) (worst imaginable health state) to 100 mm (best imaginable health state); higher scores indicate a better health state. Adjusted means were derived from the ANCOVA model with baseline value as a covariate, treatment	

group & prior use of anti-TNF alpha treatments as factors.

The 15 mg BID treatment group was closed to further enrolment early on in the study by Protocol Amendment 5 after only 16 participants were enrolled into this group. Therefore, the efficacy analysis was not performed for this group because the results may be difficult to interpret due to the small sample size.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

SAEs were assessed from informed consent through and including 28 calendar days after last administration of study treatment (i.e. 11 weeks). Non-SAEs were recorded from time of first dose of study treatment through last participant visit (i.e. 15 weeks).

Adverse event reporting additional description:

The same event may appear as both an AE and an SAE. However, what is presented are distinct events. An event may be categorized as serious in 1 participant and as nonserious in another participant, or 1 participant may have experienced both a serious and nonserious event during the study.

Assessment type	Systematic

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Only female participants were counted as exposed to this adverse event of ovarian cyst.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 July 2011	Amendment 1 was country-specific to Japan and added specific safety screening and monitoring requirements.
07 September 2011	Amendment 2 corrected an error in the first question of the CDAI (the primary endpoint assessment tool) to add the word "very," which had been inadvertently omitted, before the words "soft stools." Language regarding publication policy was also added to meet requirements for all countries involved in this study. The opportunity was then taken to also correct other minor typographical errors and clarify some language that was felt to be imprecise or unclear in the protocol.
02 July 2012	Amendment 3 was a country-specific amendment for India and the Netherlands that excluded subjects over 65 years of age.
28 September 2012	Amendment 4 updated standard Pfizer protocol text, including safety language in various sections. An updated prohibited medication table was also included, as were lymphocyte count requirements for subject selection and monitoring, discontinuation criteria for lymphopenia, guidance regarding surgery during the study, and updates to the background section.
16 November 2012	Amendment 5 removed the tofacitinib 15 mg BID dose group and updated the statistical methods and dose rationale sections accordingly. This amendment also revised the country-specific upper age limit for India.

Notes:
