Global end of trial date	29 July 2015	
Was the trial ended prematurely?	No	

Notes:

General information about the trial

Main objective of the trial:

To estimate the effects of tofacitinib in maintaining clinical response or clinical remission in subjects with moderate to severe Crohn's disease (CD) who previously achieved clinical response or clinical remission at Week 8 in the induction Study A3921083

Protection of trial subjects:

This study was conducted in compliance with the ethical principles originating in or derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. In addition, all local regulatory requirements were followed, in particular, those affording greater protection to the safety of trial participants.

Background therapy: -	,
Evidence for comparator: -	
Actual start date of recruitment	12 March 2012
Long term follow-up planned	No
Independent data monitoring committe (IDMC) involvement?	e Yes

Notes:

Population of trial subjects	
Subjects enrolled per country	
Country: Number of subjects enrolled	Australia: 6
Country: Number of subjects enrolled	Austria: 3
Country: Number of subjects enrolled	Bulgaria: 3
Country: Number of subjects enrolled	Canada: 8
Country: Number of subjects enrolled	Czech Republic: 1
Country: Number of subjects enrolled	France: 4
Country: Number of subjects enrolled	Germany: 14

Worldwide total number of subjects	180
EEA total number of subjects	63

Notes:

Subjects enrolled per age group	
In utero	lo.
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	176
From 65 to 84 years	4
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 180 subjects were randomized to the study

Pre-assignment

Screening details:

Baseline visit for this study took place on the same day as the Study A3921083 Week 8 visit. Participants who achieved clinical response-100 and/or clinical remission after completion of the 8-week induction therapy in Study A3921083 and who fulfilled the inclusion/exclusion criteria were randomly assigned to 1 of 3 treatments of this study.

Period 1 Period 1 title Overall Study (overall period) Is this the baseline period? Yes Allocation method Randomised - controlled Blinding used Double blind Roles blinded Investigator, Monitor, Subject, Carer, Data analyst, Assessor

Blinding implementation details:

Study treatment assignment was blinded to participants, investigators, and the sponsor. Assignment of participant identification number and study drug, site drug inventory control and emergency unblinding, were managed through a telerandomization tool. At the initiation of the study, the study site was instructed on how to use the telerandomization tool to break the blind, and each study site was provided a manual containing complete instructions for web or telephone access.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Placebo (two placebo tablets) to match tofacitinib for oral administration BID for 26 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Two placebo tablets were administered orally BID for 26 weeks.

Arm title	Tofacitinib 5 mg BID

Arm description:

Tofacitinib 5 mg (one placebo tablet and one tofacitinib tablet) for oral administration at a dose of 5 mg BID for 26 weeks.

Arm type	Experimental
Investigational medicinal product name	Tofacitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Tofacitinib 5 mg (one placebo tablet and one tofacitinib tablet) were administered orally BID for 26 weeks.

Arm title	Tofacitinib 10 mg BID

Arm description:	
Tofacitinib 10 mg (two tofacitinib tablets) for oral administration at a dose of 10 mg BID for 26 weeks.	
Arm type	Experimental
Investigational medicinal product name	Tofacitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Tofacitinib 10 mg (two tofacitinib tablets) were administered orally BID for 26 weeks.

Number of subjects in period 1	Placebo	Tofacitinib 5 mg BID	Tofacitinib 10 mg BID
Started	59	60	61
Completed	27	32	38
Not completed	32	28	23
Consent withdrawn by subject	2	2	1
Does not meet entrance criteria	1	-	1
Adverse event, non-fatal	1	5	3
Study terminated by sponsor	1	-	1
Unspecified	1	-	-
Lost to follow-up	-	-	1
Lack of efficacy	26	21	16

Tofacitinib 10 mg (two tofacitinib tablets) for oral administration at a dose of 10 mg BID for 26 weeks.

Primary: Percentage of Participants With Clinical Response-100 (as Defined by a Decrease in Crohn's Disease Activity Index [CDAI] Score of at Least 100 Points from Baseline) or Clinical Remission (CDAI Score less than [<]150) at Week 26

End point title	Percentage of Participants With Clinical Response-100 (as
	Defined by a Decrease in Crohn's Disease Activity Index [CDAI]
	Score of at Least 100 Points from Baseline) or Clinical
	Remission (CDAI Score less than [<]150) at Week 26

End point description:

Clinical response-100 was defined as a reduction in CDAI score of at least 100 points from baseline of the parent A3921083 study. Clinical remission was a CDAI score <150 points. CDAI is a composite index consisting of a weighted scoring of 8 disease variables: number of liquid or very soft stools, extent of abdominal pain, general well-being, occurrence of extra-intestinal symptoms, need for anti-diarrheal drugs, presence of abdominal masses, hematocrit, and body weight. CDAI score was based partly on entries (7 days before evaluation) from participant's diary kept while on study. CDAI scores range from 0 to approximately 600, higher score indicates higher disease activity.

Secondary: Change from Baseline in CRP by Week

End point title Change from Baseline in CRP by Week

End point description:

The test for CRP is a laboratory measurement for evaluation of an acute phase reactant of inflammation through the use of an ultrasensitive assay. A decrease in the level of CRP indicates reduction in inflammation and therefore improvement.

End point type Secondary

Secondary: Tofacitinib Plasma Concentration by Nominal Post-Dose Sampling Time and Tofacitinib Dose

End point title	Tofacitinib Plasma Concentration by Nominal Post-Dose
	Sampling Time and Tofacitinib Dose ^[1]

End point description:

Plasma samples were collected from participants for the determination of tofacitinib concentrations. Only samples from tofacitinib-treated participants were subsequently analyzed. Plasma concentration data are summarized by nominal sample collection times specified in the protocol, and actual sample collection times may be different.

End point type	Secondary
----------------	-----------

End point timeframe:

Pre-dose, 20 minutes, 40 minutes, 1 hour and 2 hours post-dose at Weeks 12 and 26/early termination visit

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Inferential analyses were not performed for this endpoint. Only descriptive statistics (mean and standard deviation) for tofacitinib plasma concentration were presented.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Serious adverse events (SAEs) were assessed from informed consent through and including 28 days after last dose of study treatment (30 weeks). Non-SAEs were recorded from time of first dose of study treatment through last participant visit (30 weeks).

Adverse event reporting additional description:

The same event may appear as both an adverse event (AE) and an SAE. However, what is presented are distinct events. An event may be categorized as serious in 1 participant and as non-serious in another participant, or 1 participant may have experienced both a serious and non-serious event during the study.

Notes:

- [1] The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
- Justification: Male subject are excluded from the total number. Exposed subjects are only females since this AE can only occur in females.
- [2] The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
- Justification: Male subject are excluded from the total number. Exposed subjects are only females since this AE can only occur in females.
- [3] The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
- Justification: Male subject are excluded from the total number. Exposed subjects are only females since this AE can only occur in females.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 September 2011	This amendment was produced primarily to correct an error in the first question of the CDAI, the primary endpoint assessment tool, for the study, to add the word "very" before the words "soft stools". This word was inadvertently omitted in the first version of the protocol. Language regarding publication policy was also added to meet requirements for all countries involved in this study. The opportunity was then taken to also correct other minor typographical errors and to clarify some language that was felt to be imprecise or unclear in the protocol.
28 September 2012	This amendment updated standard Pfizer protocol text, including safety language in various sections, including Administration, Reproductive Status of Female Subjects, and Adverse Event Reporting. This amendment also included an updated prohibited medications table, lymphocyte count requirement for participant selection and monitoring and discontinuation criteria for lymphopenia, guidance regarding surgery during the study, and updated to the Background section among other revisions.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
