Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 September 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	24 February 2014
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

This was a Phase II, multicenter, randomized, double-blind, placebo-controlled study. The primary objective was to estimate the efficacy of MEGF0444A combined with modified FOLFOX-6 (mFOLFOX-6; consisting of 5-fluorouracil, folinic acid, oxaliplatin), plus bevacizumab therapy in participants with previously untreated metastatic colorectal cancer (mCRC), as measured by progression-free survival (PFS).

Protection of trial subjects:

The study was conducted in accordance with the United States Food and Drug Administration regulations, the International Conference on Harmonisation E6 guideline for Good Clinical Practice, and applicable local, state, and federal laws, as well as other applicable country laws, according to the regulations and procedures described in the protocol. The investigator, or a person designated by the investigator obtained written informed consent from each participant participating in this study, after adequate explanation of the aims, methods, anticipated benefits, and potential hazards of the study. For participants not qualified or incapable of giving legal consent, written consent was obtained from the legally acceptable representative. Approval from the Independent Ethics Committees (IEC) /Institutional Review Board (IRB) was obtained before starting the study. The protocol amendments were prepared by the Sponsor and approved by the IEC/IRB.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 November 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	20 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 18
Country: Number of subjects enrolled	Poland: 11
Country: Number of subjects enrolled	United States: 41
Country: Number of subjects enrolled	Belgium: 18
Country: Number of subjects enrolled	Spain: 38
Worldwide total number of subjects	126
EEA total number of subjects	67

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	81
From 65 to 84 years	45
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Overall 127 participants were randomized and included in efficacy analysis, 125 were included in safety analysis (1 participant = screen failure; 1 participant = withdrew prior to first treatment) and 126 participants were randomized in the disposition.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	MEGF0444A + mFOLFOX-6 + Bevacizumab

Arm description:

Participants received MEGF0444A at a fixed dose of 400 milligrams (mg) intravenous (IV) infusion, followed by bevacizumab 5 milligram per kilogram (mg/kg) IV infusion, and then mFOLFOX-6 (consisting of oxaliplatin 85 milligrams per square meter [mg/m^2] IV infusion, 400 mg/m^2 folinic acid IV infusion, and 400 mg/m^2 5-FU administered as an initial IV bolus and followed by continuous IV infusion of 2400 mg/m^2) on Day 1 of each 14-day cycle. After 8 cycles, oxaliplatin was stopped and MEGF0444A, bevacizumab, folinic acid, and 5-FU were continued until disease progression, or unacceptable toxicity for a maximum of 24 months (up to 52 cycles).

Arm type	Experimental
Investigational medicinal product name	MEGF0444A
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

MEGF0444A administered at a fixed dose of 400 mg IV infusion on Day 1 of Cycle 1 and on Day 1 of each subsequent 14-day cycle for a maximum of 24 months.

Arm title	Placebo + mFOLFOX-6 + Bevacizumab
------------------	-----------------------------------

Arm description:

Participants received placebo matched to MEGF0444A at a fixed dose of 400 mg IV infusion, followed by bevacizumab 5 mg/kg IV infusion, and then mFOLFOX-6 (consisting of oxaliplatin 85 mg/m^2 IV infusion, 400 mg/m^2 folinic acid IV infusion, and 400 mg/m^2 5-FU administered as an initial IV bolus and followed by continuous IV infusion of 2400 mg/m^2) on Day 1 of each 14-day cycle. After 8 cycles, oxaliplatin was stopped and placebo matched to MEGF0444A, bevacizumab, folinic acid, and 5-FU were continued until disease progression, or unacceptable toxicity for a maximum of 24 months (up to 52 cycles).

Subject analysis set type	Intention-to-treat
Subject analysis set description:	
This analysis set included all the participants randomized to placebo part of the study.	

Primary: PFS According to Response Evaluation Criteria in Solid Tumors (RECIST) Version (v)1.1

End point title	PFS According to Response Evaluation Criteria in Solid Tumors (RECIST) Version (v)1.1 ^[1]
End point description:	
PFS was defined as the time from randomization to the first occurrence of documented disease progression (PD) based on RECIST v1.1 or death due to any cause within 30 days of the last treatment, whichever occurs earlier as determined by the investigator. For target lesions, PD was defined as at least a 20 percent (%) increase in the sum of the longest diameter of target lesions, taking as reference the smallest sum of the longest diameter recorded since treatment started or the appearance of 1 or more new lesions. For non-target lesions, PD was defined as the appearance of 1 or more new lesions and/or unequivocal progression of existing non-target lesions. In the event of no disease progression or documented death prior to study termination, PFS was censored at the date of the last evaluable tumor assessment.	
Analysis population: All randomized participants.	
End point type	Primary
End point timeframe:	
Baseline until 20 months	
Notes:	
[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.	
Justification: All the randomized participants were included in the end point analysis.

Secondary: Percentage of Participants with Objective Response According to RECIST v1.1

End point title	Percentage of Participants with Objective Response According to RECIST v1.1 ^[7]
-----------------	--

End point description:

Objective response was defined as a complete response (CR) plus partial response (PR), as determined by the investigator using RECIST v1.1. CR was defined as disappearance of all target lesions and PR was defined as at least a 30% decrease in the sum of diameter of target lesions, taking as reference the baseline sum of diameters.

Analysis population: All randomized participants with measurable disease at baseline.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline until 20 months

Notes:

[7] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: All the randomized participants were included in the end point analysis.

End point values	MEGF0444A + mFOLFOX-6 + Bevacizumab	Placebo + mFOLFOX-6+ Bevacizumab		
Subject group type	Reporting group	Subject analysis set		
Number of subjects analysed	63	63		
Units: percentage of participants				
number (confidence interval 95%)	58.7 (45.6 to 71)	63.5 (51.2 to 75.3)

P-value	= 0.7149
Method	Logrank
Parameter estimate	Difference in objective response rate
Point estimate	-4.8
Confidence interval	
level	95 %
sides	2-sided
lower limit	-21.8
upper limit	12.2

Secondary: Duration of Objective Response

End point title	Duration of Objective Response ^[8]
End point description: Duration of objective response was defined as the time from initial occurrence of complete response (CR) or partial response (PR), until documented disease progression using RECIST v1.1 as determined by investigator or death, whichever occurred first. CR was defined as disappearance of all target lesions, and PR was defined as at least a 30% decrease in the sum of diameter of target lesions, taking as reference the baseline sum of diameters in the absence of CR. Participants were censored at the date of last tumor assessment. Duration of response was not analyzed as Sponsor terminated study because of lack of efficacy.	
End point type	Secondary
End point timeframe: Baseline until 20 months	
Notes: [8] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: All the randomized participants were included in the end point analysis. However, duration of response was not analyzed as Sponsor terminated study because of lack of efficacy.	

End point values	MEGF0444A + mFOLFOX-6 + Bevacizumab	Placebo + mFOLFOX-6+ Bevacizumab		
Subject group type	Reporting group	Subject analysis set		
Number of subjects analysed	0 ^[9]	0 ^[10]		
Units: months				
median (confidence interval 95%)	(to)	(to)		

Notes:

[9] - Duration of response was not analyzed as Sponsor terminated study because of lack of efficacy.

[10] - Duration of response was not analyzed as Sponsor terminated study because of lack of efficacy.

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Survival (OS)

End point title	Overall Survival (OS) ^[11]
-----------------	---------------------------------------

End point description:

OS is defined as the time from randomization until death from any cause. All deaths were included, without regard to whether they occur on study or following treatment discontinuation. For participants who did not die, OS was censored at the date of last contact.

Analysis population: All randomized participants. '99999' signifies that data was not evaluable due to high number of censored participants.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline until 20 months

Notes:

[11] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: All the randomized participants were included in the end point analysis.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline until 3 years

Adverse event reporting additional description:

Of 127 randomized participants, one participant was screen failure, and one participant was withdrawn prior to first treatment, and therefore 125 randomized participants who received at least one dose of study treatment were included in safety analysis.

Assessment type	Non-systematic

Reporting groups

Reporting group title	MEGF0444A + mFOLFOX-6 + Bevacizumab
-----------------------	-------------------------------------

Reporting group description:

Participants received MEGF0444A at a fixed dose of 400 mg IV infusion, followed by bevacizumab 5 mg/kg, IV infusion, and then mFOLFOX-6 (consisting of oxaliplatin 85 mg/m² IV infusion, 400 mg/m² folinic acid IV infusion, and 400 mg/m² 5-FU administered as an initial IV bolus and followed by continuous IV infusion of 2400 mg/m²) on Day 1 of each 14-day cycle. After 8 cycles, oxaliplatin was stopped and MEGF0444A, bevacizumab, folinic acid, and 5-FU were continued until disease progression, or unacceptable toxicity for a maximum of 24 months (up to 52 cycles).

Reporting group title	Placebo + mFOLFOX-6+ Bevacizumab
-----------------------	----------------------------------

Reporting group description:

Participants received placebo matched to MEGF0444A at a fixed dose of 400 mg IV infusion, followed by bevacizumab 5 mg/kg, IV infusion, and then mFOLFOX-6 (consisting of oxaliplatin 85 mg/m² IV infusion, 400 mg/m² folinic acid IV infusion, and 400 mg/m² 5-FU administered as an initial IV bolus and followed by continuous IV infusion of 2400 mg/m²) on Day 1 of each 14-day cycle. After 8 cycles, oxaliplatin was stopped and placebo matched to MEGF0444A, bevacizumab, folinic acid, and 5-FU were continued until disease progression, or unacceptable toxicity for a maximum of 24 months (up to 52 cycles).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 October 2011	<ul style="list-style-type: none">- Clarified several aspects of study conduct and background;- FOLFOX dose modification schema for participants experiencing hematologic toxicity was modified to reflect prevailing practices;-The use of head computed tomography or brain magnetic resonance imaging was pertained only to participants with suspected central nervous system metastases or carcinomatous meningitis.
18 September 2012	<ul style="list-style-type: none">- Included new unplanned safety data from Study MEF4984g (a Phase II study of MEGF0444A, bevacizumab, and carboplatin/paclitaxel chemotherapy in advanced non-small cell lung cancer participants) and from the current Study MEF4982g. As a result of these analyses, any Grade greater than or equal to (\geq) 3 bleeding adverse event was reported within 24 hours as a protocol-defined adverse event of special interest. Concomitant use of non-steroidal anti-inflammatory drugs was discouraged;- Included clinical safety and efficacy updates from the Phase 1 studies of MEGF0444A;- Included the required use of in-line filter for administration of MEGF0444A.
21 April 2013	<ul style="list-style-type: none">- The Sponsor's plan to perform an interim analysis was added. The interim analysis was intended to provide a preliminary assessment of the activity of study regimen and not to terminate the trial if efficacy results appeared favourable;- The amendment clarified that only participants who discontinued study treatment for reasons other than disease progression continued tumor assessments until documentation of progressive disease, initiation of another anti-cancer therapy, withdrawal of consent, or death.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The protocol-specified primary analysis demonstrated no evidence of efficacy; and the Sponsor terminated the study.

Notes:
