

Clinical trial results:

An exploratory study of ranibizumab (Lucentis) for treatment of uveitic patients with refractory cystoid macular oedema. 'The LIMO study'

Summary

EudraCT number	2011-001869-41
Trial protocol	GB
Global end of trial date	18 June 2014

Results information

Result version number	v1 (current)
This version publication date	02 June 2022
First version publication date	02 June 2022
Summary attachment (see zip file)	end of study report (end of study report LIMO.pdf) Explanation for the post-hoc analysis (Explanation of the post-hoc analysis.pdf)

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 November 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 June 2014
Global end of trial reached?	Yes
Global end of trial date	18 June 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Does ranibizumab improve visual outcome in patients with uveitic macular oedema refractory or ineligible for 'standard of care' therapy?

Protection of trial subjects:

Patients were reviewed at each visit and treatment for uveitis was allowed and instated in case of need.

Background therapy: -

Evidence for comparator:

No comparators included in the study

Actual start date of recruitment	04 July 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 10
Worldwide total number of subjects	10
EEA total number of subjects	10

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	7
From 65 to 84 years	3
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted in one single centre, Moorfields Eye Hospital NHS Foundation Trust. The first patient was recruited on the 21st of May 2012 and the last patient was enrolled on the 6th of June 2013.

Pre-assignment

Screening details:

Patients were identified through uveitis clinics. 21 patients were assessed for eligibility, 11 patients did not meet inclusion/exclusion criteria therefore 10 patients were enrolled in the study.

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

The study is not blinded - open-label

Arms

Arm title	ranibizumab for uveitic CMO
------------------	-----------------------------

Arm description:

open-label. only arm in the study

Arm type	Experimental
Investigational medicinal product name	ranibizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

intravitreal injection of a single dose of 0.05 ml containing 0.5 mg ranibizumab

Number of subjects in period 1	ranibizumab for uveitic CMO
Started	10
Completed	10

Baseline characteristics

Reporting groups

Primary: Change in central retinal thickness as measured by Spectralis spectral domain optical coherence tomography in the study eye from baseline to 6 months

End point title	Change in central retinal thickness as measured by Spectralis spectral domain optical coherence tomography in the study eye from baseline to 6 months ^[1]
-----------------	--

End point description:

End point type	Primary
----------------	---------

End point timeframe:

baseline to 6 months

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The number and proportion of patients in whom resolution is achieved will be reported and a 95% confidence interval for the proportion will be computed by the exact binomial method. Summary data will be provided for all other study variables using means and SDs or non-parametric equivalents.

End point values	ranibizumab for uveitic CMO			
Subject group type	Reporting group			
Number of subjects analysed	10			
Units: µm				
median (inter-quartile range (Q1-Q3))	-42.5 (-140 to 4)

Reporting groups

Reporting group title	All cohort
-----------------------	------------

Reporting group description:

All the patients enrolled in the study have been included in this group

Serious adverse events	All cohort		
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 10 (0.00%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events			

Frequency threshold for reporting non-serious adverse events: 0.05 %

Non-serious adverse events	All cohort		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	10 / 10 (100.00%)		
General disorders and administration site conditions			
Eye pain post injection			
subjects affected / exposed	3 / 10 (30.00%)		
occurrences (all)	3		
Eye redness post injection			
subjects affected / exposed	8 / 10 (80.00%)		
occurrences (all)	9		
Headache post injection			
subjects affected / exposed	1 / 10 (10.00%)		
occurrences (all)	1		
Wisdom tooth pain			

subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Ear and labyrinth disorders Decreased hearing acuity subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Eye disorders Relapse of Uveitis subjects affected / exposed occurrences (all)	3 / 10 (30.00%) 7		
Itchy sensation around eye (skin) subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Cystoid macular oedema (CMO) subjects affected / exposed occurrences (all)	2 / 10 (20.00%) 4		
Bilateral dry eye subjects affected / exposed occurrences (all)	2 / 10 (20.00%) 2		
Poor visual acuity subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Floaters subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Twitches - eye subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Blepharitis subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Pain - eye subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Respiratory, thoracic and mediastinal disorders			

Coughing of unidentified origin subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Chest Infection subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Sore throat subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Skin and subcutaneous tissue disorders Eczema subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Musculoskeletal and connective tissue disorders Axillary Pain subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Dislocated fingers subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Back pain subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Leg pain subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Knee pain subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Hip and knee pain subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
back pain / cyst subjects affected / exposed occurrences (all)	1 / 10 (10.00%) 1		
Infections and infestations			

Lung infection			
subjects affected / exposed	1 / 10 (10.00%)		
occurrences (all)	1		
Gum infection			
subjects affected / exposed	1 / 10 (10.00%)		
occurrences (all)	1		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 January 2013	Inclusion criteria to be changed: a 3 month period post cataract surgery before recruitment rather than 6 months. RATIONALE: 3 months is the standard period following cataract surgery one would wait in clinical practice before undertaking a further non-urgent intraocular procedure e.g. YAG laser capsulotomy. In addition, waiting 3 months following any intraocular surgery is the period of time now commonly used in studies investigating intravitreal agents, such as this study. Furthermore, macular oedema directly related to surgery would be expected to have resolved within 3 months.
18 June 2014	Amendment to CI of the study This amendment was submitted before the end of the study (submitted to MHRA on the 14th of May 2014) and was pending when last visit was conducted on the 18th of June 2014. The MHRA was aware of this last visit date, and they approved the substantial amendment on the 31st of July 2014.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

A limitation for this study was the limited number of subjects enrolled in the study

Notes:
