

## Clinical trial results:

### Safety and Immunogenicity of a Quadrivalent Influenza Vaccine Administered via the Intramuscular Route in Adult and Elderly Subjects Summary

EudraCT number	2011-001976-21
Trial protocol	DE
Global end of trial date	11 June 2012

#### Results information

Result version number	v1 (current)
This version publication date	05 February 2016
First version publication date	29 January 2015

#### Trial information

##### Trial identification

Sponsor protocol code	GQM01
-----------------------	-------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	U1111-1120-1486

Notes:

#### Sponsors

Sponsor organisation name	Sanofi Pasteur SA
Sponsor organisation address	2, avenue Pont Pasteur, F-69367 Lyon Cedex 07, France,
Public contact	Director, Clinical Development, Sanofi Pasteur, +33 (4) 37 37 58 50, Stephanie.Pepin@sanofipasteur.com
Scientific contact	Director, Clinical Development, Sanofi Pasteur, +33 (4) 37 37 58 50, Stephanie.Pepin@sanofipasteur.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 September 2012
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 June 2012
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate non-inferiority of antibody responses induced by quadrivalent influenza vaccine (QIV) compared with the licensed 2011-2012 trivalent influenza vaccine (TIV; containing the B/Brisbane strain) and the investigational TIV (containing the B/Florida strain) as assessed in all subjects by geometric mean titer (GMT) for each strain

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were randomized and vaccinated in the study. Vaccinations were performed by qualified and trained study personnel. Subjects with allergy to any of the vaccine components were not vaccinated. After vaccination, subjects were also kept under clinical observation for 30 minutes to ensure their safety. Appropriate medical equipment was also available on site in case of any immediate allergic reactions.

Background therapy:

Not applicable

Evidence for comparator:

The licensed TIV for the 2011-2012 season containing the B/Brisbane strain (TIV1) was used as an active control.

Actual start date of recruitment	21 October 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	France: 1088
Country: Number of subjects enrolled	Germany: 480
Worldwide total number of subjects	1568
EEA total number of subjects	1568

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1260
From 65 to 84 years	303
85 years and over	5

## Subject disposition

### Recruitment

Recruitment details:

Study subjects were enrolled from 21 October 2011 to 10 November 2011 at 14 clinical sites in France and 4 in Germany.

### Pre-assignment

Screening details:

A total of 1568 subjects who met all inclusion criteria and none of the exclusion criteria were enrolled and vaccinated.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

This study was blinded to the Investigator and for all subjects in the QIV and TIV1 groups. After the 1st database lock, the code could be broken by the Investigator in the event of an SAE and if identification of the vaccine received could influence SAE treatment (Responsible Medical Officer was to be notified first) and by the GPV department for reporting to Health authorities in the case of an SAE as described in International Conference on Harmonisation (only for the subject in question).

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	QIV 18-60 years

Arm description:

Adults aged 18-60 years who received one dose of quadrivalent influenza vaccine (QIV).

Arm type	Experimental
Investigational medicinal product name	Quadrivalent influenza vaccine (split virion, inactivated) (QIV)
Investigational medicinal product code	481
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL dose, intramuscular to be injected into the deltoid muscle or deep subcutaneous (SC), one dose on Day 0.

<b>Arm title</b>	QIV >60 years
------------------	---------------

Arm description:

Elderly subjects aged >60 years who received one dose of quadrivalent influenza vaccine (QIV).

Arm type	Experimental
Investigational medicinal product name	Quadrivalent influenza vaccine (split virion, inactivated) (QIV)
Investigational medicinal product code	481
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL dose, intramuscular to be injected into the deltoid muscle or deep subcutaneous (SC), one dose on Day 0.

<b>Arm title</b>	Licensed TIV 18-60 years
------------------	--------------------------

Arm description:

Adults aged 18-60 years who received one dose of licensed trivalent influenza vaccine for the 2011-

2012 season that contained either the B strain from the Victoria lineage, the B/Brisbane strain (TIV1).

Arm type	Active comparator
Investigational medicinal product name	Sanofi Pasteur licensed TIV for the 2011-2012 season (TIV1)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL dose, intramuscular (IM) to be injected into the deltoid muscle or deep subcutaneous (SC), one dose on Day 0.

<b>Arm title</b>	Licensed TIV >60 years
------------------	------------------------

Arm description:

Elderly subjects aged >60 years who received one dose of licensed trivalent influenza vaccine for the 2011-2012 season that contained either the B strain from the Victoria lineage, the B/Brisbane strain (TIV1).

Arm type	Active comparator
Investigational medicinal product name	Sanofi Pasteur licensed TIV for the 2011-2012 season (TIV1)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL dose, intramuscular (IM) to be injected into the deltoid muscle or deep subcutaneous (SC), one dose on Day 0.

<b>Arm title</b>	Investigational TIV 18-60 years
------------------	---------------------------------

Arm description:

Adults aged 18-60 years who received one dose of investigational trivalent influenza vaccine containing the B strain from the Yamagata lineage, the B/Florida strain (TIV2).

Arm type	Active comparator
Investigational medicinal product name	Investigational TIV (split-virion, inactivated) (TIV2)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL dose, intramuscular (IM) to be injected into the deltoid muscle or deep subcutaneous (SC), one dose on Day 0.

<b>Arm title</b>	Investigational TIV >60 years
------------------	-------------------------------

Arm description:

Elderly subjects aged >60 years who received one dose of investigational trivalent influenza vaccine containing the B strain from the Yamagata lineage, the B/Florida strain (TIV2).

Arm type	Active comparator
Investigational medicinal product name	Investigational TIV (split-virion, inactivated) (TIV2)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL dose, intramuscular (IM) to be injected into the deltoid muscle or deep subcutaneous (SC), one dose on Day 0.

<b>Number of subjects in period 1</b>	QIV 18-60 years	QIV >60 years	Licensed TIV 18-60 years
Started	559	558	113
Completed	557	557	113
Not completed	2	1	0

## End points

### End points reporting groups

Reporting group title	QIV 18-60 years
Reporting group description: Adults aged 18-60 years who received one dose of quadrivalent influenza vaccine (QIV).	
Reporting group title	QIV >60 years
Reporting group description: Elderly subjects aged >60 years who received one dose of quadrivalent influenza vaccine (QIV).	
Reporting group title	Licensed TIV 18-60 years
Reporting group description: Adults aged 18-60 years who received one dose of licensed trivalent influenza vaccine for the 2011-2012 season that contained either the B strain from the Victoria lineage, the B/Brisbane strain (TIV1).	
Reporting group title	Licensed TIV >60 years
Reporting group description: Elderly subjects aged >60 years who received one dose of licensed trivalent influenza vaccine for the 2011-2012 season that contained either the B strain from the Victoria lineage, the B/Brisbane strain (TIV1).	
Reporting group title	Investigational TIV 18-60 years
Reporting group description: Adults aged 18-60 years who received one dose of investigational trivalent influenza vaccine containing the B strain from the Yamagata lineage, the B/Florida strain (TIV2).	
Reporting group title	Investigational TIV >60 years
Reporting group description: Elderly subjects aged >60 years who received one dose of investigational trivalent influenza vaccine containing the B strain from the Yamagata lineage, the B/Florida strain (TIV2).	

### Primary: Geometric Mean Titers (GMTs) of HAI Antibody Response to Quadrivalent Influenza Vaccine (QIV) Strains Before and After Vaccination with a QIV Administered via the Intramuscular Route in Adults and Elderly Subjects

End point title	Geometric Mean Titers (GMTs) of HAI Antibody Response to Quadrivalent Influenza Vaccine (QIV) Strains Before and After Vaccination with a QIV Administered via the Intramuscular Route in Adults and Elderly Subjects <sup>[1][2]</sup>
End point description: Immunogenicity was evaluated using the hemagglutination inhibition (HAI) method.	
End point type	Primary
End point timeframe: Day 0 (pre-vaccination) and Day 21 post-vaccination	

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive analyses were performed based on the study groups and the study vaccine administered for this outcome.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Immunogenicity data were presented based on vaccine and age group specified in the outcome title.

End point values	QIV 18-60 years	QIV >60 years		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	556	554

Notes:

[13] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive analyses were performed based on the study groups and the study vaccine administered for this outcome.

### Statistical analyses

---

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse event data were collected from Day 0 (post-vaccination) up to Day 21 post-vaccination.

Assessment type	Non-systematic
-----------------	----------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	14.0
--------------------	------

### Reporting groups

Reporting group title	QIV 18-60 years
-----------------------	-----------------

Reporting group description:

Adults aged 18-60 years who received one dose of quadrivalent influenza vaccine (QIV).

Reporting group title	QIV >60 years
-----------------------	---------------

Reporting group description:

Elderly subjects aged >60 years who received one dose of quadrivalent influenza vaccine (QIV).

Reporting group title	Licensed TIV 18-60 years
-----------------------	--------------------------

Reporting group description:

Adults aged 18-60 years who received one dose of licensed trivalent influenza vaccine for the 2011-2012 season that contained either the B strain from the Victoria lineage, the B/Brisbane strain (TIV1).

Reporting group title	Licensed TIV >60 years
-----------------------	------------------------

Reporting group description:

Elderly subjects aged >60 years who received one dose of licensed trivalent influenza vaccine for the 2011-2012 season that contained either the B strain from the Victoria lineage, the B/Brisbane strain (TIV1).

Reporting group title	Investigational TIV 18-60 years
-----------------------	---------------------------------

Reporting group description:

Adults aged 18-60 years who received one dose of investigational trivalent influenza vaccine containing the B strain from the Yamagata lineage, the B/Florida strain (TIV2).

Reporting group title	Investigational TIV >60 years
-----------------------	-------------------------------

Reporting group description:

Elderly subjects aged >60 years who received one dose of investigational trivalent influenza vaccine containing the B strain from the Yamagata lineage, the B/Florida strain (TIV2).

Injection site swelling alternative assessment type: Systematic subjects affected / exposed <sup>[4]</sup> occurrences (all)	4 / 113 (3.54%) 4	6 / 110 (5.45%) 6	2 / 113 (1.77%) 2
Injection site ecchymosis alternative assessment type: Systematic subjects affected / exposed <sup>[5]</sup> occurrences (all)	0 / 113 (0.00%) 0	0 / 110 (0.00%) 0	0 / 113 (0.00%) 0
Malaise alternative assessment type: Systematic subjects affected / exposed <sup>[6]</sup> occurrences (all)	7 / 113 (6.19%) 7	15 / 110 (13.64%) 15	10 / 113 (8.85%) 10
Shivering			

alternative assessment type: Systematic subjects affected / exposed <sup>[7]</sup> occurrences (all)	8 / 113 (7.08%) 8	10 / 110 (9.09%) 10	6 / 113 (5.31%) 6
Skin and subcutaneous tissue disorders Injection site induration alternative assessment type: Systematic subjects affected / exposed <sup>[8]</sup> occurrences (all)	2 / 113 (1.77%) 2	8 / 110 (7.27%) 8	2 / 113 (1.77%) 2
Musculoskeletal and connective tissue disorders Myalgia alternative assessment type: Systematic subjects affected / exposed <sup>[9]</sup> occurrences (all)	14 / 113 (12.39%) 14	26 / 110 (23.64%) 26	10 / 113 (8.85%) 10

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects who returned the safety diary card and data were available for the event during the period.

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects who returned the safety diary card and data were available for the event during the period.

[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects who returned the safety diary card and data were available for the event during the period.

[4] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects who returned the safety diary card and data were available for the event during the period.

[5] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects who returned the safety diary card and data were available for the event during the period.

[6] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects who returned the safety diary card and data were available for the event during the period.

[7] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects who returned the safety diary card and data were available for the event during the period.

[8] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects who returned the safety diary card and data were available for the event during the period.

[9] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects who returned the safety diary card and data were available for the event during the period.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 August 2011	A statement was added that defined specific criteria for stopping the trial during the enrollment phase in case of post-vaccination safety concerns.
22 March 2012	The protocol was amended in regards to a site (Center 003) closing. For subjects included in Center 003, the 6-month safety follow-up would be conducted by Center 004 and subjects would be asked to sign an addendum to the ICF to consent to being contacted by Center 004. It also clarified how subjects from Center 003 would be handled in the clinical database if they refuse to be followed by Center 004 for the 6-month safety follow-up and where source documents of subjects included in Center 003 are archived.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
