Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000342-PIP01-08
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 December 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	21 August 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To characterize the plasma pharmacokinetic (PK) profile of Sunitinib and its active metabolite SU012662 in children and young adults with advanced, unresectable Gastrointestinal Stromal Tumor (GIST).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and

in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP)

Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 June 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Czech Republic: 1
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	United States: 3
Worldwide total number of subjects	6
EEA total number of subjects	3

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	6
Adults (18-64 years)	0

From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 4 centres in 3 countries between 12 June 2012 and 21 August 2017.

Pre-assignment

Screening details:

This was a single arm, multi-center, multi-national study where a total of 6 subjects were dosed based on the body surface area. The starting dose of Sunitinib was 15 milligram/ meter square (mg/m^2) per day administered orally, from Day 1 to 28 in each treatment cycle of 42 days.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Sunitinib
-----------	-----------

Arm description:

Subjects received Sunitinib capsules orally at a dose based on body surface area (BSA) (minimum dose of 15 milligram/ meter square [mg/m^2] up to a maximum dose of 30 mg/m^2) once daily, from Day 1 to 28 in each treatment cycle of 42 days (up to a maximum of 18 cycles) until completion of study treatment, disease progression, unacceptable toxicity, required a treatment rest (greater than [>4] weeks), withdrawal of subject consent, or if other withdrawal criteria were met.

Arm type	Experimental
Investigational medicinal product name	Sunitinib
Investigational medicinal product code	
Other name	SU011248
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Sunitinib capsules orally at a dose based on body surface area (BSA) (minimum dose of 15 milligram/ meter square [mg/m^2] up to a maximum dose of 30 mg/m^2) once daily, from Day 1 to 28 in each treatment cycle of 42 days (up to a maximum of 18 cycles).

Number of subjects in period 1	Sunitinib
Started	6
Completed	5
Not completed	1
Subject Decision	1

Baseline characteristics

Reporting groups

Reporting group title	Sunitinib
-----------------------	-----------

Reporting group description:

Subjects received Sunitinib capsules orally at a dose based on body surface area (BSA) (minimum dose of 15 milligram/ meter square [mg/m²] up to a maximum dose of 30 mg/m²) once daily, from Day 1 to 28 in each treatment cycle of 42 days (up to a maximum of 18 cycles) until completion of study treatment, disease progression, unacceptable toxicity, required a treatment rest (greater than [>4] weeks), withdrawal of subject consent, or if other withdrawal criteria were met.

Secondary: Number of Subjects With Treatment-Emergent Adverse Events (AEs) and Serious Adverse Events (SAEs)

End point title	Number of Subjects With Treatment-Emergent Adverse Events (AEs) and Serious Adverse Events (SAEs)
End point description:	
An AE was any untoward medical occurrence in a subject who received study drug without regard to possibility of causal relationship. An SAE was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged insubject hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. Treatment-emergent were events between first dose of study drug and up to end of study (up to Cycle 18) that were absent before treatment or that worsened relative to pretreatment state. AEs included both non-serious adverse events (AEs) and SAEs. The as-treated population included all enrolled subjects who received at least 1 dose of study drug.	
End point type	Secondary

Secondary: Number of Subjects With Objective Response

End point title	Number of Subjects With Objective Response
End point description: Objective response in subjects was defined as the number of subjects with confirmed complete response (CR) or partial response (PR) according to Response Evaluation Criteria in Solid Tumors (RECIST) version 1.1. Confirmed response were those that persisted on repeat imaging study for at least 4 weeks after initial documentation of response. CR was defined as disappearance of all lesions (target and non-target). PR was defined as at least 30 percentage (%) decrease in the sum of the longest dimensions of target lesions taking as a reference the baseline sum longest dimensions, with non-target lesions not increased or absent. The full analysis set included all enrolled subjects regardless of what treatment, if any, was received.	
End point type	Secondary

Secondary: Duration of Response

End point title	Duration of Response
-----------------	----------------------

End point description:

Duration of response: Time (in months) from the first documentation of objective tumor response (confirmed CR or PR) to the first documentation of disease progression or death due to any cause. Confirmed response were those that persisted on repeat imaging study for at least 4 weeks after initial documentation of response. CR: Disappearance of all lesions (target and non-target). PR: At least 30% decrease in the sum of the longest dimensions of target lesions taking as a reference the baseline sum longest dimensions, with non-target lesions not increased or absent. Progression: At least a 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum on study (includes the baseline sum if that is the smallest on study). Analysis was performed on a subset of FAS which included subjects who had confirmed CR or PR. Since, none of the subjects had confirmed CR or PR, hence duration of response was not analyzed.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline until death or discontinuation from the study whichever occurred first (maximum duration: up to Cycle 18; each cycle was of 42 days)

End point values	Sunitinib

End point description:

Pearson correlation coefficient between Progression Free Survival (PFS) with total drug (Sunitinib + SU012662) concentration at Day 28 of Cycle 1 was calculated. PFS was defined as time (in months) from date of enrollment to the first documentation of disease progression or to death (due to any cause), whichever occurred first. Progression was defined as at least a 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum on study (this includes the baseline sum if that is the smallest on study). The PK population included all treated subjects with at least one PK observation.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline until disease progression or discontinuation from the study, or death, whichever occurred first (maximum duration: up to Cycle 18; each cycle was of 42 days)

End point values	Sunitinib			
Subject group type	Reporting group			
Number of subjects analysed	6			
Units: correlation coefficient				
number (not applicable)	0.5904			

Statistical analyses

No statistical analyses for this end point

Secondary: Estimated Sunitinib Plasma Concentration at Which 50% of the Maximum Effect (EC50) for each Selected Efficacy Parameter (e.g., Sum of Largest Diameters for Target Tumors) was Observed

End point title	Estimated Sunitinib Plasma Concentration at Which 50% of the Maximum Effect (EC50) for each Selected Efficacy Parameter (e.g., Sum of Largest Diameters for Target Tumors) was Observed
-----------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

End point description:

Due to low number of enrolled subjects (n=6), there was insufficient data to perform any type of pharmacokinetic/ pharmacodynamic modeling to obtain EC50 values, hence data is not reported.

End point type	Secondary
----------------	-----------

End point timeframe:

Cycle 1 Day 1: pre-dose, 2, 4, 6, and 8 hours post-dose

End point values	Sunitinib			
Subject group type	Reporting group			
Number of subjects analysed	0 ^[6]			
Units: ng/mL				
geometric mean (geometric coefficient of variation)	()			

Notes:

[6] - Data for this endpoint was not collected and summarized due to change in planned analysis.

Statistical analyses

No statistical analyses for this end point

Secondary: Estimated Sunitinib Plasma Concentration at Which 50% of the Maximum Effect (EC50) for Each Selected Safety Endpoint (e.g., Absolute Neutrophil Count) was Observed

End point title	Estimated Sunitinib Plasma Concentration at Which 50% of the Maximum Effect (EC50) for Each Selected Safety Endpoint (e.g., Absolute Neutrophil Count) was Observed
-----------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------

End point description:

Due to low number of enrolled subjects (n=6), there was insufficient data to perform any type of pharmacokinetic/ pharmacodynamic modeling to obtain EC50 values, hence data is not reported.

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to end of study (up to Cycle 18, each cycle was of 42 days)

Adverse event reporting additional description:

Same event may appear as both an AE and SAE. However, what is presented are distinct events. An event may be categorized as serious in one subject and as non-serious in another, or a subject may have experienced both a serious and non-serious event.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Sunitinib
-----------------------	-----------

Reporting group description:

Subjects were dosed based on the body surface area. The starting dose of Sunitinib was 15 milligram/meter square (mg/m²) per day administered orally, from Day 1 to 28 in each treatment cycle of 42 days until completion of study treatment, disease progression, unacceptable toxicity, required a treatment rest (greater than [>4] weeks), withdrawal of subject consent, or if other withdrawal criteria were met.

Serious adverse events	Sunitinib		
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 6 (0.00%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events			

Frequency threshold for reporting non-serious adverse events: 0 %

Non-serious adverse events	Sunitinib		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	6 / 6 (100.00%)		
General disorders and administration site conditions			
Asthenia			
subjects affected / exposed	1 / 6 (16.67%)		
occurrences (all)	1

occurrences (all)	3		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 June 2012	The purpose was to revise The Schedule of Activities and associated protocol sections to include growth and pubertal maturation assessments for paediatric subjects, a reduced mandatory visit schedule after Cycle 3, and clarification of standard tumor analysis requirements. The term "chemotherapy naïve" was removed from the study design and the associated secondary objective to study tolerability in pediatric subjects with GIST.
31 July 2017	The purpose was to reduce the numbers of subjects enrolled in the study (in the range of age from 6 to < 18) from 15 to 6 evaluable subjects. The centralized review of imaging (ie, MRI, CT scans etc) aimed to confirm the efficacy endpoint was no longer required. As this study is part of a PIP, both these changes had been agreed with EMA's Pediatric Committee (PDCO) and are aligned with the PIP binding elements.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Data for three primary PK end points (Estimated steady-state C_{max}, AUC₂₄ and CL/F) will be estimated and reported separately as part of the Non-linear Mixed Effects Modeling analysis, and will be provided once available.

Notes:
