

Clinical trial results:

A randomized, double-blind, placebo controlled, parallel group, proof of concept study evaluating the efficacy,safety, pharmacokinetics and pharmacodynamics of QGE031 in the treatment of patients with moderate to severe atopic dermatitis

Summary

EudraCT number	2011-002112-84
Trial protocol	AT DE NL
Global end of trial date	28 August 2013

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 August 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 August 2013
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the efficacy of QGE031 relative to placebo at 12 weeks in patients with atopic dermatitis (AD) as assessed by Eczema Area and Severity Index (EASI)

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

The use of topical rescue medication was allowed at all times during the trial but was restricted. Twice daily application of mild or moderate strength topical corticosteroids (using the European four category classification system of mild, moderate, potent and very potent) was allowed. These rescue medications were provided by the study site and used to control the patient's atopic dermatitis and the resulting symptoms not adequately controlled on study drug. The combination of allowed topical rescue medications that most closely approximates the patient's current regimen was dispensed at screening, and full tube weights obtained. The use of oral antihistamines as a rescue medication for itch not controlled by the study drug was allowed at all times during the trial; this medication was provided by the study site. Use of rescue medication was required to be recorded in the eCRF.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 January 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 14
Country: Number of subjects enrolled	France: 4
Country: Number of subjects enrolled	Germany: 4
Worldwide total number of subjects	22
EEA total number of subjects	22

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	22
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Approximately 30 patients were planned to be randomly assigned to one of three treatment groups conducted in parallel. Based upon the results of the first interim analysis, the study was terminated after 22 patients were enrolled.

Pre-assignment

Screening details:

The study consisted of up to a 28-day screening period (Day -28 to Day -1), a treatment period of 12 weeks, a follow-up period of 12 weeks, and an End of Study (EoS) evaluation.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	QGE031

Arm description:

QGE031 will be administered as a subcutaneous dose every two weeks (q2)

Arm type	Experimental
Investigational medicinal product name	QGE031
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

subcutaneous injection, which was administered 280 mg once every two weeks

Arm title	Placebo
------------------	---------

Arm description:

A QGE031 matched placebo will be administered as a subcutaneous dose q2 weeks

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

subcutaneous injection, which was administered once every two weeks

Arm title	Cyclosporine A
------------------	----------------

Arm description:

Cyclosporine A will be administered (as per label) for atopic dermatitis.
2.5 – 5.0 mg/kg BID

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Cyclosporine A
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, soft
Routes of administration	Oral use

Dosage and administration details:

2.5 – 5.0 mg/kg oral daily dose split twice a day

Number of subjects in period 1	QGE031	Placebo	Cyclosporine A
Started	10	10	2
Randomized	10	10	2
Completed	7	9	1
Not completed	3	1	1
Consent withdrawn by subject	1	-	-
Adverse event, non-fatal	1	-	1
Administrative problems	-	1	-
Lost to follow-up	1	-	-

Primary: Change in Eczema Area and Severity Index (EASI) from baseline to week 12

End point title	Change in Eczema Area and Severity Index (EASI) from baseline to week 12 ^[1]
End point description: The EASI was used to make an assessment of the extent and severity of each patient's atopic dermatitis. Erythema, induration/papulation, excoriation and lichenification were scored in each of four body areas, head/neck (H), upper limbs (UL), trunk (T), and lower limbs (LL) assigned proportionate body surface areas of 10% (H), 20% (UL), 30% (T), and 40% (LL). The severity for each sign was scored on a scale from 0-3 (none, mild, moderate and severe) where half-points were allowed. The area within each body region with the key signs of inflammation was estimated as a percentage of the total area of that particular body region.	
End point type	Primary
End point timeframe: Baseline and Week 12	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis has been performed for this endpoint.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 October 2011	The purpose of Amendment 1 was to clarify, and correct, certain criteria and procedures in the protocol and to make the length of the QGE031/placebo and cyclosporine treatment periods consistent.
22 November 2011	Amendment 2 of the protocol was made to add an exclusion criterion: Patients with a history of schistosomiasis, or stool examination positive for ova or parasites at Screening, or travel to an area endemic with schistosomiasis (in the six months prior to Screening).
23 January 2012	Amendment 3 of the protocol was made to address concerns of the potential for QGE031 to cause thrombocytopenia. Thrombocytopenia has been observed in pre-clinical studies with omalizumab, an anti-IgE monoclonal antibody with a related mechanism of action, although it has not emerged as a safety concern in man for this drug. Thrombocytopenia has thus far not been observed with QGE031 in the conducted toxicology studies in non-human primates or in man.
14 May 2012	Amendment 4 of the protocol :As new clinical data from other studies became available, these new data were incorporated into the protocol. In addition, it was requested that study endpoints be specified in the protocol.
19 June 2012	The protocol allowed some flexibility to replace patients whose atopic dermatitis was not stable and thus worsened shortly after starting study treatment. As this caused concern that it would lead to replacement of patients showing a clear lack of efficacy, which would bias the estimation of efficacy, this flexibility has been removed from the protocol. After a request to change study eligibility criteria to include a population more closely reflecting that of the cyclosporine label, it was decided to stop the cyclosporine arm instead.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
23 April 2013	Decision to terminate study.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

In April 2013, Novartis informed the Health Authorities about its decision to terminate the study. Any ongoing patients enrolled at the time of termination were allowed to complete the study according to the approved protocol. The last follow-up vi

Notes:
