

Clinical trial results:

A randomized, two-arm, open-label, multicenter Phase II trial assessing the efficacy and safety of pertuzumab given in combination with trastuzumab plus an aromatase inhibitor in first line patients with HER2-positive and hormone receptor-positive advanced (metastatic or locally advanced) breast cancer

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	17 March 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	17 March 2016
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

To compare PFS of pertuzumab given in combination with trastuzumab plus an aromatase inhibitor (AI) versus trastuzumab plus an AI.

Protection of trial subjects:

All study subjects were required to read and sign an informed consent form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 February 2012
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	60 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Brazil: 40
Country: Number of subjects enrolled	France: 23
Country: Number of subjects enrolled	India: 26
Country: Number of subjects enrolled	Italy: 41
Country: Number of subjects enrolled	Spain: 55
Country: Number of subjects enrolled	Turkey: 17
Country: Number of subjects enrolled	United Kingdom: 16
Country: Number of subjects enrolled	United States: 40
Worldwide total number of subjects	258
EEA total number of subjects	135

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	172
From 65 to 84 years	81
85 years and over	5

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 258 subjects were enrolled in the study from 17 February 2012. Results are presented here up to data cut-off date (17 March 2016).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A (Pertuzumab+Trastuzumab+AI)

Arm description:

Subjects received pertuzumab at a loading dose of 840 mg followed by 420 mg along with trastuzumab at a loading dose of 8 mg/kg of body weight followed by 6 mg/kg of body weight on Day 1 or Day 2 of each 3-weekly cycle until disease progression, unacceptable toxicity, withdrawal of consent, or death, or the predefined end of study whichever occurs first. Participant received aromatase inhibitor (AI), orally as per product labeling (anastrozole: 1 mg once daily or letrozole: 2.5 mg once daily). Subjects receiving induction chemotherapy up to the first 18-24 weeks of the treatment period were to receive a taxane (docetaxel every 3 weeks or paclitaxel weekly), administered in line with the respective product labeling.

Arm type	Experimental
Investigational medicinal product name	Pertuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Pertuzumab was administered as an intravenous infusion on Day 1 or Day 2 of the first treatment cycle as a loading dose of 840 mg, followed by 420 mg on Day 1 or Day 2 of each subsequent 3 weekly cycle.

Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Trastuzumab was administered as an intravenous infusion on Day 1 or Day 2 of the first treatment cycle as a loading dose of 8 mg/kg, followed by 6 mg/kg on Day 1 or Day 2 of each subsequent 3 weekly cycle.

Investigational medicinal product name	Anastrozole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Anastrozole was administered 1 mg once daily.

Investigational medicinal product name	Letrozole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Letrozole was administered 2.5 mg once daily.

Investigational medicinal product name	Taxane
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Taxane was administered (docetaxel every 3 weeks or paclitaxel weekly) in line with the respective product labeling.

Arm title	Arm B (Trastuzumab+AI)
------------------	------------------------

Arm description:

Subjects received trastuzumab at a loading dose of 8 mg/kg of body weight followed by 6 mg/kg of body weight on Day 1 or Day 2 of each 3-weekly cycle until disease progression, unacceptable toxicity, withdrawal of consent, or death, or the predefined end of study whichever occurs first. Participant received aromatase inhibitor (AI), orally as per product labeling (anastrozole: 1 mg once daily or letrozole: 2.5 mg once daily). Subjects receiving induction chemotherapy up to the first 18-24 weeks of the treatment period were to receive a taxane (docetaxel every 3 weeks or paclitaxel weekly), administered in line with the respective product labeling.

Arm type	Active comparator
Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Trastuzumab was administered as an intravenous infusion on Day 1 or Day 2 of the first treatment cycle as a loading dose of 8 mg/kg, followed by 6 mg/kg on Day 1 or Day 2 of each subsequent 3 weekly cycle.

Investigational medicinal product name	Anastrozole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Anastrozole was administered 1 mg once daily.

Investigational medicinal product name	Letrozole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Letrozole was administered 2.5 mg once daily.

Investigational medicinal product name	Taxane
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Taxane was administered (docetaxel every 3 weeks or paclitaxel weekly) in line with the respective product labeling.

Number of subjects in period 1	Arm A (Pertuzumab+Trastuzumab+AI)	Arm B (Trastuzumab+AI)
Started	129	129
Completed	80	79
Not completed	49	50
Consent withdrawn by subject	13	13
Death	33	28
Reason not specified	2	3
Lost to follow-up	1	6

Primary: Progression-Free Survival (PFS)

End point title	Progression-Free Survival (PFS)
End point description:	
PFS is defined as the time from randomization until the first radiographically documented progression of disease or death from any cause, whichever occurred first (either during study treatment or during follow-up). Progression of disease was evaluated according to the response evaluation criteria in solid tumors (RECIST) (version 1.1). Progressive disease is defined as at least a 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum on study (this includes the baseline sum if that is the smallest on study). In addition to the relative increase of 20%, the sum must also demonstrate an absolute increase of at least 5 mm (Note: the appearance of one or more new lesions is also considered progression). Participants with no PFS events were censored at the time of the last evaluable tumor assessment. Intent-to-treat (ITT) population included all randomized subjects.	
End point type	Primary
End point timeframe:	
Baseline to progressive disease or death (approximately, up to 49 months)	

End point values	Arm A (Pertuzumab+ Trastuzumab+ AI)	Arm B (Trastuzumab+ AI)

Secondary: Duration of Response (DOR)

End point title	Duration of Response (DOR)
End point description:	
DOR was defined as the period from the date of initial confirmed partial response (PR) or complete response (CR) until the date of progressive disease or death from any cause. According to RECIST version 1.1, CR: disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm; PR: at least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum diameters. Subjects with no documented progression after CR or PR were censored at the last date at which they were known to have had the CR or PR, respectively. ITT population included all randomised subjects. Here, 99999 indicates upper limit of CI as it was not reached.	
End point type	Secondary
End point timeframe:	
Baseline up to 49 months, approximately

Secondary: Time to Response (TTR)

End point title	Time to Response (TTR)
End point description: TTR was defined as the time from the date of randomisation to the date of first CR or PR. According to RECIST version 1.1, CR: disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm; PR: at least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum diameters. A censored time to response was calculated at the date of the last adequate tumor assessment as there was no date of confirmed response (CR or PR). If no tumor assessment is performed for the participant (or all post-baseline assessments are not evaluable or PD) the censoring day would be set to day 1 (date of randomisation).	
End point type	Secondary
End point timeframe: Baseline up to 49 months, approximately

lower limit	0.78
upper limit	1.57

Secondary: Overall Response Rate (ORR)

End point title	Overall Response Rate (ORR)
End point description:	
ORR was defined as subjects with best (confirmed) overall response (BOR) of either CR or PR. ORR was assessed by the investigator according to RECIST version 1.1 and is based on BOR, which is defined as best response recorded from start of study treatment until disease progression/recurrence or death. CR: disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm; PR: at least a 30% decrease in the sum of diameters of target lesions, taking as reference baseline sum diameters; SD: neither sufficient shrinkage to qualify for PR nor sufficient increase to qualify for PD, taking as reference the smallest sum diameters while on study. Subjects needed to have two consecutive assessments of PR or CR to be a responder. Only subjects with measurable disease at baseline were included in the analysis of BOR and who did not have any evaluable post-baseline assessments were classified as not evaluable.	
End point type	Secondary

Reporting groups

Reporting group title	Arm A (Pertuzumab+Trastuzumab+AI)
-----------------------	-----------------------------------

Reporting group description:

Pertuzumab was administered as an intravenous infusion on Day 1 or Day 2 of the first treatment cycle as a loading dose of 840 mg, followed by 420 mg on Day 1 or Day 2 of each subsequent 3 weekly cycle. Trastuzumab was administered as an intravenous infusion on Day 1 or Day 2 of the first treatment cycle as a loading dose of 8 mg/kg, followed by 6 mg/kg on Day 1 or Day 2 of each subsequent 3 weekly cycle. An AI (oral) was to be administered in line with product labeling (anastrozole: 1 mg once daily; letrozole: 2.5 mg once daily). Patients receiving induction chemotherapy up to the first 18-24 weeks of the treatment period were to receive a taxane (docetaxel every 3 weeks or paclitaxel weekly), administered in line with the respective product labeling.

Reporting group title	Arm B (Trastuzumab+AI)
-----------------------	------------------------

Reporting group description:

Trastuzumab was administered as an intravenous infusion on Day 1 or Day 2 of the first treatment cycle as a loading dose of 8 mg/kg, followed by 6 mg/kg on Day 1 or Day 2 of each subsequent 3 weekly cycle. An AI (oral) was to be administered in line with product labeling (anastrozole: 1 mg once daily; letrozole: 2.5 mg once daily). Patients receiving induction chemotherapy up to the first 18-24 weeks of the treatment period were to receive a taxane (docetaxel every 3 weeks or paclitaxel weekly), administered in line with the respective product labeling.

Serious adverse events	Arm A (Pertuzumab+Trastuzumab+AI)	Arm B (Trastuzumab+AI)	
Total subjects affected by serious adverse events			
subjects affected / exposed	42 / 127 (33.07%)	24 / 124 (19.35%)	
number of deaths (all causes)	33	28	
number of deaths resulting from adverse events	0	0	
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Adenocarcinoma of colon			
subjects affected / exposed	1 / 127 (0.79%)	0 / 124 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Adenoid cystic carcinoma of salivary gland			

subjects affected / exposed	0 / 127 (0.00%)	1 / 124 (0.81%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
B-cell lymphoma			
subjects affected / exposed	1 / 127 (0.79%)	0 / 124 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Cancer pain			
subjects affected / exposed	0 / 127 (0.00%)	1 / 124 (0.81%)

Influenza subjects affected / exposed occurrences (all)	4 / 127 (3.15%) 4	7 / 124 (5.65%) 7	
Metabolism and nutrition disorders Decreased appetite subjects affected / exposed occurrences (all)	20 / 127 (15.75%) 21	10 / 124 (8.06%) 13	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 August 2012	<ol style="list-style-type: none">1.The decision to include induction chemotherapy had to be made prior to randomization2. The chemotherapy induction period was amended from "18 weeks" to "18 to 24 weeks" to allow for the application of different treatment schedules3. Exclusion criteria were amended to exclude participants with CNS metastases only if they were not medically well controlled after receiving local therapy, to reduce the period since major surgery to randomization to 14 days, since receipt of intravenous antibiotics to 7 days, and to specify that use of chronic steroids referred to a period of ≥ 3 months and concurrent participation in a clinical study referred to therapeutic clinical studies4. The sponsor would continue to provide pertuzumab for those participants who were still receiving the IMP at the end of the study and who are willing and considered suitable to enter an extension study for the purpose of collecting safety data and pre-specified efficacy measures5. The dosing schedule of pertuzumab was amended (from Day 1 to Day 1 or Day 2) and an instruction was included to permit pertuzumab, trastuzumab and taxanes to be administered in any order (apart from Cycle 1) to allow more flexibility in the timing and order of administration of study medication6. The interval duration for the scheduling of tumor assessments after 36 months was extended to reduce the burden of assessments for participants at this stage of the study7. An IDMC was established to review safety
28 April 2016	<ol style="list-style-type: none">1. Treatment of participants with initially inoperable locally advanced breast cancer at inclusion which subsequently became resectable was at the investigator's discretion2. The follow-up period for the evaluation of OS was extended from 24 months to 60 months3. For this protocol, mortality was an efficacy endpoint. It was clarified that death should be considered an outcome and not a distinct event. An independent monitoring committee was to monitor the frequency of deaths from all causes4. Participants with limited liver abnormalities were allowed in the study
20 September 2016	<ol style="list-style-type: none">1. The definition for abnormal liver function test AEs reverted to the definition used for Version 2.0 of the protocol. This amendment was introduced following a request from the Medicines and Healthcare products Regulatory Agency in the United Kingdom (UK) and to ensure that there was consistency within the PERTAIN (EudraCT number 2011-002132-10) study assessments over time and globally2. The Schedule of Assessments was revised to reflect the fact that an increased follow-up visit tolerance of an additional 5 weeks, 18 weeks in total, was now permitted for participants who were progression-free for >36 months

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
