

Clinical trial results:

A two part, double-blind, randomized, placebo-controlled and open-label study to investigate the efficacy, safety and tolerability of eltrombopag, a thrombopoietin receptor agonist, in pediatric patients with previously treated chronic immune (idiopathic) thrombocytopenic purpura (ITP).

Summary

EudraCT number	2011-002184-17

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 February 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	02 January 2014
Global end of trial reached?	Yes
Global end of trial date	02 January 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy of eltrombopag, relative to placebo, in achieving platelet counts of ≥ 50 Gi/L, when administered to pediatric subjects with previously treated chronic ITP during the first 12 weeks of Part 1, the randomized treatment period.

Protection of trial subjects:

Liver stopping criteria – in the instance that liver tests indicate elevated levels, the criteria will advise how to monitor patients as well as study procedure interruption or discontinuation. Dosing Guidelines – guidelines are put into place to ensure, based on individual platelet response, study treatment will maintain platelet counts in a safe hemostatic range, not necessarily in the normal range.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 February 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Pediatric participants meeting eligibility criteria were enrolled into 3 cohorts depending upon age. Cohort 1 enrolled participants who were between 12 and 17 years old, Cohort 2 enrolled participants who were between 6 and 11 years old, and Cohort 3 enrolled participants who were between 1 and 5 years old.

Pre-assignment

Screening details:

This study was comprised of a 13-week Double-Blind (DB), randomized Treatment Period (Part 1), followed by a 24-week Open-Label (OL) eltrombopag-only period (Part 2). After completion of Part 2, participants completed a 24- to 28-week Follow-up period, including an ophthalmic examination 24 weeks after the last dose of study treatment.

Period 1

Period 1 title	Part 1 (Randomized Period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Part 1 (Randomized Period)-Placebo
------------------	------------------------------------

Arm description:

In Part 1, participants aged between 6 and 17 years with a body weight <27 kilograms (kg) received placebo 37.5 milligrams (mg) once daily (QD), and those with a body weight ≥27 kg received placebo 50 mg QD. Participants of East Asian ancestry received a starting dose of placebo 25 mg QD. Participants aged between 1 and 5 years received placebo 1.2 milligrams per kilogram (mg/kg) QD; participants of East Asian ancestry received a starting dose of placebo 0.8 milligrams per kilograms per day (mg/kg/day). Standard of care treatments were allowed during the study, and were prescribed based on the investigator's discretion.

Arm type	Placebo
Investigational medicinal product name	Placebo to match eltrombopag 12.5mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tablets were administered once daily at least 2 hours before and 4 hours after any product such as antacids, dairy products, or mineral supplements containing polyvalent cations. Maximum daily dose was not to exceed 75mg.

Investigational medicinal product name	Placebo to match eltrombopag 25, 50, 75mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tablets were administered once daily at least 2 hours before and 4 hours after any product such as antacids, dairy products, or mineral supplements containing polyvalent cations. Maximum daily dose was not to exceed 75mg

Investigational medicinal product name	Placebo to match eltrombopag 20mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for oral suspension

Routes of administration	Oral use
--------------------------	----------

Dosage and administration details:

Powder for oral suspension is combined with 9.5mL of water and drawn into a 10cc oral syringe for oral administration once daily at least 2 hours before and 4 hours after any product such as antacids, dairy products, or mineral supplements containing polyvalent cations. Maximum daily dose was not to exceed 75mg.

Arm title	Part 1 (Randomized Period)-Eltrombopag
------------------	--

Arm description:

In Part 1, participants aged between 6 and 17 years with a body weight <27 kg received eltrombopag 37.5 mg QD, and those with a body weight ≥27 kg received eltrombopag 50 mg QD. Participants of East Asian ancestry received a starting dose of eltrombopag 25 mg QD. Participants aged between 1 and 5 years received eltrombopag 1.2 mg/kg QD; participants of East Asian ancestry received a starting dose of eltrombopag 0.8 mg/kg/day. Participants continued on the same dose of eltrombopag in Part 2 unless adjustments were warranted according to the dosing guidelines. Standard of care treatments were allowed during the study, and were prescribed based on the investigator's discretion.

Arm type	Active comparator
Investigational medicinal product name	Eltrombopag 12.5mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tablets were administered once daily at least 2 hours before and 4 hours after any product such as antacids, dairy products, or mineral supplements containing polyvalent cations. Maximum daily dose was not to exceed 75mg.

Investigational medicinal product name	Eltrombopag 25mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tablets were administered once daily at least 2 hours before and 4 hours after any product such as antacids, dairy products, or mineral supplements containing polyvalent cations. Maximum daily dose was not to exceed 75mg.

Investigational medicinal product name	Eltrombopag 50mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tablets were administered once daily at least 2 hours before and 4 hours after any product such as antacids, dairy products, or mineral supplements containing polyvalent cations. Maximum daily dose was not to exceed 75mg.

Investigational medicinal product name	Eltrombopag 75mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tablets were administered once daily at least 2 hours before and 4 hours after any product such as antacids, dairy products, or mineral supplements containing polyvalent cations. Maximum daily dose was not to exceed 75mg.

Investigational medicinal product name	Eltrombopag 20mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for oral suspension

Routes of administration	Oral use
--------------------------	----------

Dosage and administration details:

Powder for oral suspension is combined with 9.5mL of water and drawn into a 10cc oral syringe for oral administration once daily at least 2 hours before and 4 hours after any product such as antacids, dairy products, or mineral supplements containing polyvalent cations. Maximum daily dose was not to exceed 75mg.

Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for oral suspension
Routes of administration	Oral use

Dosage and administration details:

Powder for oral suspension is combined with 9.5mL of water and drawn into a 10cc oral syringe for oral administration once daily at least 2 hours before and 4 hours after any product such as antacids, dairy products, or mineral supplements containing polyvalent cations. Maximum daily dose was not to exceed 75mg.

Number of subjects in period 2^[1]	Part 2 (Open-Label Period) - Eltrombopag
Started	87
Completed	80
Not completed	7
Adverse event, non-fatal	4
Withdrawal by parent/guardian	1
Lack of efficacy	2

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Two participants completed Part 1: Randomized Period but did not enter Part 2: Open-Label Period because the participants withdrew consent.

Statistical analyses

No statistical analyses for this end point

Secondary: Weighted mean platelet count

End point title	Weighted mean platelet count
-----------------	------------------------------

End point description:

The weighted mean platelet count is defined as "the area under the platelet-time curve divided by the duration of the study (12 weeks)". Weighted mean platelet counts from baseline to week 12 of the randomized period was compared between placebo and eltrombopag using an analysis of covariance model (ANCOVA) adjusting for baseline platelet count and age cohort. For each subject the area between two adjacent visits with platelet counts was calculated. The area was calculated for all pairs of adjacent visits starting at Day 1 of randomized period and then the total sum of all the areas was divided by the total duration of time during the randomized period. For each subject, this method calculates an 'average' platelet count and it allows the possibility that subjects may have had different number of assessments during different times relative to baseline.

Statistical analyses

No statistical analyses for this end point

Secondary: Maximum duration for which a participant continuously maintained a platelet count of ≥ 50 Gi/L during the first 12 weeks of Part 1

End point title	Maximum duration for which a participant continuously maintained a platelet count of ≥ 50 Gi/L during the first 12 weeks of Part 1
-----------------	---

End point description:

The maximum duration for which a participant continuously maintained a platelet count ≥ 50 Gi/L was calculated and summarized for the first 12 weeks of Part 1. Participants with non-weekly assessments were assumed to have maintained a positive response for each week between two assessments that had positive responses. If a participant achieved a positive response at an assessment and then achieved a negative response at the next assessment, then it was assumed that the participant had achieved a positive response for one day.

Statistical analyses

No statistical analyses for this end point

Secondary: Number of participants with any bleeding and significant bleeding as assessed using the World Health Organization (WHO) Bleeding Scale during Part 1

End point title	Number of participants with any bleeding and significant bleeding as assessed using the World Health Organization (WHO) Bleeding Scale during Part 1
-----------------	--

End point description:

The WHO Bleeding Scale is a measure of bleeding severity with the following grades: Grade 0=no bleeding; Grade 1=petechiae; Grade 2=mild blood loss; Grade 3=gross bleeding; Grade 4=debilitating blood loss. The WHO grades were dichotomized into the following categories: no bleeding=Grade 0; any bleeding=Grades 1 to 4; no clinically significant bleeding=Grades 0 to 1; clinically significant bleeding=Grades 2 to 4. Baseline was defined as the Day 1 assessment or the latest possible screening assessment. Only those participants that did not enroll in Part 2 were analyzed during the follow-up visits. Only those participants available at the specified time points were analyzed (represented by n=X,X in the category titles).

Notes:

[33] - Safety Population. Only participants who entered Part 2(Open-label eltrombopag phase) were analyzed

Statistical analyses

No statistical analyses for this end point

Secondary: Number of participants (par) with vital sign data falling outside the reference ranges (RR) at the indicated visit during Part 1

End point title	Number of participants (par) with vital sign data falling outside the reference ranges (RR) at the indicated visit during Part 1
-----------------	--

End point description:

Vital sign measurements were taken before blood draws and included systolic blood pressure(SBP), diastolic blood pressure(DBP), and heart rate(HR). The number of par are reported with vital sign data falling outside the standard RR: RR high(RRH) and RR low(RRL). The BL value is the value taken at Day 1 or if missing, the latest non-missing SCR value. RR for SBP or DBP (mmHg) are read: Lower Limit of Normal, Normal Range, Upper Limit of Normal. For Ages 1 to 5 years (yrs) ranges are SBP <85, 85 to 115, >115; DBP <45, 45 to 70, >70. Ages 6 to 11 yrs: SBP <85, 85 to 120, >120; DBP <50, 50 to 75, >75. Ages 12 to 17 yrs: SBP <95, 95 to 135, >135; DBP <55, 55 to 85, >85. RR for HR(bpm) are ages 1 to < 3 yrs: <90, 90 to 140, >140; ages 3 to < 5 yrs: <75, 75 to 130, >130, ages 5 to < 8yrs: <65, 65 to 115, >115; ages 8 to < 12yrs: <55, 55 to 110, >110; and ages 12 to 18 yrs: <55, 55 to 110, >110. Only par available at the specified time points were analyzed(n=X,X in the category title)

Notes:

[36] - Safety population. Only participants who entered Part 2(Open-label eltrombopag phase) were analyzed.

Statistical analyses

No statistical analyses for this end point

Secondary: Number of participants with a change in visual acuity since Baseline at Week 12 of Part 1

End point title	Number of participants with a change in visual acuity since Baseline at Week 12 of Part 1
-----------------	---

End point description:

The visual acuity assessment was performed by an ophthalmologist or an optometrist under the guidance of an ophthalmologist. Visual acuity is defined as acuteness or clearness of vision. Change in visual acuity results are presented as No (no change from Baseline), Not Clinically Significant (NCS), Improvement, and Worsening since Baseline. The Baseline value was obtained at the Screening Visit.

Notes:

[40] - Safety population. Only participants who entered Part 2(Open-label eltrombopag phase) were analyzed.

Statistical analyses

No statistical analyses for this end point

Secondary: Number of participants with worsening visual acuity due to cataracts at Week 12 of Part 1

End point title	Number of participants with worsening visual acuity due to cataracts at Week 12 of Part 1
-----------------	---

End point description:

The visual acuity assessment was performed by an ophthalmologist or an optometrist under the guidance of an ophthalmologist. Visual acuity is defined as acuteness or clearness of vision. The number

of participants with worsening visual acuity due to cataracts at Week 12 of Part 1 are presented. Change due to cataracts is categorized as "Yes" or "No". Only those participants who had a result of 'worsening' in assessment of change of visual acuity at this timepoint were analyzed.

Secondary: Pharmacokinetic (PK) assessments for eltrombopag for AUC (0-t)

End point title	Pharmacokinetic (PK) assessments for eltrombopag for AUC (0-t)
-----------------	--

End point description:

Single PK samples were collected at each visit during Part 1 Weeks 2, 4, 6, 8, 10, 12 and at each weekly or monthly visit during Part 2 Weeks 1-12 (Study Weeks 13-37). The concentration data were pooled across visits to identify population PK and variability parameter estimates and covariate effects. AUC(0-t) is defined as the area under the concentration-time curve over the dosing interval. The AUC(0-t) for a 50mg dose was estimated for each cohort. From the final model, a single value of each PK parameter was estimated for each subject, and geometric mean (95% CI) values are presented for each cohort for a 50mg dose.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

On-treatment adverse events (AEs) and serious adverse events (SAEs) are defined as events occurring from the start of investigational product until follow up (up to 61 weeks).

Adverse event reporting additional description:

SAEs and non-serious AEs were collected in members of the Safety Population, comprised of all participants who had received at least one dose of the investigational product.

Assessment type	Systematic

Reporting groups

Reporting group title	Part 1 (Randomized Period)-Placebo
-----------------------	------------------------------------

Reporting group description:

In Part 1, participants aged between 6 and 17 years with a body weight <27 kilograms (kg) received placebo 37.5 milligrams (mg) once daily (QD), and those with a body weight ≥27 kg received placebo 50 mg QD. Participants of East Asian ancestry received a starting dose of placebo 25 mg QD.

Participants aged between 1 and 5 years received placebo 1.2 milligrams per kilogram (mg/kg) QD; participants of East Asian ancestry received a starting dose of placebo 0.8 milligrams per kilograms per day (mg/kg/day).

Reporting group title	Part 1 (Randomized Period)-Eltrombopag
-----------------------	--

Reporting group description:

In Part 1, participants aged between 6 and 17 years with a body weight <27 kg received eltrombopag 37.5 mg QD, and those with a body weight ≥27 kg received eltrombopag 50 mg QD. Participants of East Asian ancestry received a starting dose of eltrombopag 25 mg QD. Participants aged between 1 and 5 years received eltrombopag 1.2 mg/kg QD; participants of East Asian ancestry received a starting dose of eltrombopag 0.8 mg/kg/day.

Reporting group title	Part 2: Eltrombopag
-----------------------	---------------------

Reporting group description:

In Part 2, participants continued on the same dose of eltrombopag received in Part 1 unless adjustments were warranted according to the dosing guidelines.
