General information about the trial

Main objective of the trial:

To evaluate the single-dose pharmacokinetic profile, safety and tolerability of ceftaroline fosamil administered by intravenous infusion in children with ages from birth to younger than 12 years

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with good clinical practices and applicable regulatory requirements. Written informed consent from parent or legally acceptable representative and verbal informed assent from subject (if age appropriate and according to local requirements) were obtained before initiating study-related assessments or procedures.

Recruitment details: -

Pre-assignment

Screening details:

A total of 53 (male and female) subjects between the chronological ages of 0 and 11 years with confirmed or suspected infections were enrolled in the study.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1 (≥ 6 years to < 12 years)

Arm description:

10 subjects from age group ≥ 6 years to < 12 years were randomised to receive 10 mg/kg (up to 600 mg for subjects ≥ 60 kg) ceftaroline fosamil as a 1-hour infusion on Study Day 1.

Arm type	Experimental
Investigational medicinal product name	Ceftaroline fosamil
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

10 mg/kg (up to 600 mg for subjects ≥ 60 kg) of ceftaroline fosamil was administered as a single 1-hour infusion.

Arm title	Cohort 2 (≥ 24 months to < 6 years)
------------------	---

Arm description:

8 subjects from age group ≥ 24 months to < 6 years were randomised to receive 15 mg/kg ceftaroline fosamil as a 1.5-hour infusion on Study Day 1.

Arm type	Experimental
Investigational medicinal product name	Ceftaroline fosamil
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

15 mg/kg of ceftaroline fosamil was administered as a 1.5-hour infusion.

Arm title	Cohort 3 (≥ 28 days to < 24 months)
------------------	---

Arm description:

12 subjects [young infants and toddlers ages ≥ 28 days to < 24 months (with equal representation of subjects aged 28 days to < 12 months and 12 months to < 24 months)] were randomised to receive 12 mg/kg ceftaroline fosamil as a single 1-hour infusion (age ≥ 5 months) and 8 mg/kg ceftaroline fosamil as a single 1-hour infusion (age 28 days to 5 months) on Study Day 1, respectively.

Primary: Mean Ceftaroline Plasma Concentrations

End point title	Mean Ceftaroline Plasma Concentrations ^[1]
End point description:	
End point type	Primary
End point timeframe: Mean Ceftaroline Plasma Concentrations were measured from the end of infusion (± 5 minutes) to 5 to 7 hours after end of infusion.	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The primary objective of this study is to evaluate the safety and tolerability of ceftaroline in children and it is not powered for inferential statistical analysis.
