Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 July 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	01 July 2015
Global end of trial reached?	Yes
Global end of trial date	01 July 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study is to investigate the impact on platelet function of increasing either the aspirin dose (from 75 mg to 160 mg) or dosing frequency (to 75 mg BID) over 3 months in patients undergoing elective CABG surgery.

Protection of trial subjects:

The study was approved by the Regional Ethical Review Board in Stockholm (2011/1074-31/1). Patients are free to withdraw their consent for study treatment and/or consent to participate in the study at any time.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 December 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Sweden: 42
Worldwide total number of subjects	42
EEA total number of subjects	42

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	16
From 65 to 84 years	26
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients were recruited from Karolinska University Hospital, Sweden, between December 2011 and July 2015.

Pre-assignment

Screening details:

Patients with stable angina pectoris scheduled to undergo elective CABG were screened. Exclusion criteria were intake of any other platelet inhibitor than ASA during the last seven days prior to surgery, known bleeding disorder or kidney failure, preoperative platelet count outside of the range 100,000–450,000/ μ L or a haemoglobin level below 80g/L.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	ASA 75 mg OD

Arm description:

Patients were treated with ASA 75 mg once daily (OD) before the CABG surgery, and randomized to ASA 75 mg OD up to three months after the operation.

Arm type	Active comparator
Investigational medicinal product name	Aspirin
Investigational medicinal product code	11423 (for 75 mg)
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients were treated with ASA 75 mg once daily (OD) before the CABG surgery, and randomized to ASA 75 mg OD up to three months after the operation.

Arm title	ASA 75 mg BID
------------------	---------------

Arm description:

Patients were treated with ASA 75 mg OD before the CABG surgery, and randomized to 75 mg twice daily (BID) up to three months after the operation.

Arm type	Experimental
Investigational medicinal product name	Aspirin
Investigational medicinal product code	11423 (for 75 mg)
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients were treated with ASA 75 mg once daily (OD) before the CABG surgery, and randomized to 75 mg twice daily (BID) up to three months after the operation.

Arm title	ASA 160 mg OD
------------------	---------------

Arm description:

Patients were treated with ASA 75 mg once daily (OD) before the CABG surgery, and randomized to 160 mg OD up to three months after the operation.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Aspirin
Investigational medicinal product code	11063 (for 160 mg)
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients were treated with ASA 75 mg once daily (OD) before the CABG surgery, and randomized to ASA 160 mg OD up to three months after the operation.

Number of subjects in period 1	ASA 75 mg OD	ASA 75 mg BID	ASA 160 mg OD

occurrences (all)	2	4	4

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

There was an unfortunate high dropout of initially included patients, we encountered considerable difficulties in obtaining accurate blood samples on all four occasions during the 3m follow-up in several patients.
