

Clinical trial results:

The effect of spironolactone on calcineurin inhibitor induced nephrotoxicity

Summary

EudraCT number	2011-002243-98
Trial protocol	DK
Global end of trial date	08 April 2021

Results information

Result version number	v1 (current)
This version publication date	25 April 2022
First version publication date	25 April 2022

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 August 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	08 April 2021
Global end of trial reached?	Yes
Global end of trial date	08 April 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To investigate whether renal function in kidney transplant patients can be preserved by the addition of spironolactone to standard treatment

Protection of trial subjects:

Regular scheduled visits

Frequent measurements of plasma potassium after dosage adjustments

Background therapy:

Standard of care

Immunosuppression including a calcineurininhibitor

Evidence for comparator:

Calcineurin inhibitors (CNI) are one of the cornerstones of the immunosuppressive therapy after solid organ transplantation. The introduction of CNI has caused a significant decrease in acute rejections. However, CNI also have severe side effects including renal interstitial fibrosis and tubular atrophy, a term also referred to as CNI nephrotoxicity. In the transplanted kidney this contributes to impaired kidney function and eventually reduced graft survival.

The mineralocorticoid aldosterone may be involved in the development of renal fibrosis. Recent observations suggest that aldosterone plays a central role in the pathogenesis of CNI nephrotoxicity and that the mineralocorticoid-receptor-blocker spironolactone could be a useful agent to prevent it.

Actual start date of recruitment	25 February 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 180
Worldwide total number of subjects	180
EEA total number of subjects	180

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	148
From 65 to 84 years	32
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Inclusion was performed from February 2013 to April 2021.

Patients were included from outpatient clinics at the four participating sites.

Pre-assignment

Screening details:

Renal transplant patients were identified through the outpatient clinics in the respective sites.

Assessed for eligibility (n=959)

Excluded (n=771), hereof Not meeting inclusion criteria (n= 422), Declined participation (n=270), Eligible, but not approached (n=79)

Included (n=188), hereof Declined after inclusion (n=8)

Randomized (n=180)

Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Spironolactone
------------------	----------------

Arm description:

Spironolactone 25-50 mg OD

Arm type	Experimental
Investigational medicinal product name	Spironolactone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

25-50 mg once daily

Arm title	Placebo
------------------	---------

Arm description: -

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

1 tablet daily, increased to 2 tablets daily after 3 months if well tolerated

Number of subjects in period 1	Spironolactone	Placebo
Started	90	90
Completed	65	74
Not completed	25	16
Consent withdrawn by subject	2	-
Adverse event, non-fatal	22	16
