

Clinical trial results:

NEUROPHYSIOLOGIC STUDY AIMED AT EVALUATING ON EFFECT OF SATIVEX® ON SPASTICITY IN PROGRESSIVE MULTIPLE SCLEROSIS

Summary

EudraCT number	2011-002258-30
Trial protocol	IT
Global end of trial date	30 August 2013

Results information

Result version number	v1 (current)
This version publication date	29 June 2016
First version publication date	02 August 2015

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 November 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 August 2013
Global end of trial reached?	Yes
Global end of trial date	30 August 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the effect of Sativex (THC:CBD 1:1 ratio oromucosal spray) compared to placebo in modifying neurophysiological measures of spasticity (H/M ratio scores at baseline and at week 4) in patients affected by lower limbs spasticity in Progressive Multiple Sclerosis

Protection of trial subjects:

Insurance policy available.

Informed consent and informative sheet for patients about study procedures.

Telephone contacts at weeks 2 and 8 for Sativex dose fixation.

Presential visits at weeks 0, 4, 6, 10.

Background therapy:

Approved antispastic medication

Evidence for comparator:

Not applicable, Placebo comparator

Actual start date of recruitment	19 April 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Italy: 44
Worldwide total number of subjects	44
EEA total number of subjects	44

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	43

From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Following the protocol selection criteria

Pre-assignment

Screening details:

Patients fulfilling the protocol selection criteria, including Sativex approved label requirements and providing informed consent. Subjects affected by Secondary or Primary-Progressive MS. Sativex has been gradually titrated. Subjects received in a random order each treatment (Sativex/Placebo) during 2 subsequent 4-weeks period divided by a washout

Pre-assignment period milestones

Number of subjects started	44
Number of subjects completed	44

Period 1

Period 1 title	Overall trial (cross-over trial) (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	4 weeks Sativex and 4 weeks Placebo
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Sativex and Placebo
Investigational medicinal product code	
Other name	THC:CDB oromucosal spray, Namiximols (USAN name)
Pharmaceutical forms	Oromucosal spray
Routes of administration	Oromucosal use

Dosage and administration details:

Spray containing, for 100 microliters, 2.7mg THC and 2.5mg CBD OR Placebo gradually titrated during the first 2 weeks of treatment, increasing the number of sprays until they reached and individualized sprayed dose (maximum 12 sprays)

Arm title	4 weeks Placebo and 4 weeks Sativex
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Sativex and Placebo
Investigational medicinal product code	
Other name	THC:CBD oromucosal spray, Namiximols (USAN name)
Pharmaceutical forms	Oromucosal spray
Routes of administration	Oromucosal use

Dosage and administration details:

Spray containing, for 100 microliters, 2.7mg THC and 2.5mg CBD OR Placebo gradually titrated during the first 2 weeks of treatment, increasing the number of sprays until they reached and individualized sprayed dose (maximum 12 sprays)

Number of subjects in period 1	4 weeks Sativex and 4 weeks Placebo	4 weeks Placebo and 4 weeks Sativex
Started	22	22
Completed	17	21
Not completed	5	1
Adverse event, non-fatal	2	-
Intolerance to TMS	-	1
Serious Adverse Event, non-fatal	1	-
Personal Reasons	1	-
Starting neurorehabilitation	1	-

Primary: The treatment effect on the H reflex/Motor response ratio (H/M ratio)

End point title	The treatment effect on the H reflex/Motor response ratio (H/M ratio)
End point description:	
End point type	Primary
End point timeframe:	
H/M ratio scores at baseline and at week 4 for each treatment	

End point values	4 weeks Sativex and 4 weeks Placebo	4 weeks Placebo and 4 weeks Sativex		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	15	19		
Units: H/M ratio value				
arithmetic mean (standard deviation)				
Baseline sativex	0.37 (± 0.19)	0.3 (± 0.18)		
After 4 weeks sativex treatment	0.34 (± 0.17)	0.29 (± 0.16)		
Baseline placebo	0.31 (± 0.17)	0.31 (± 0.18)		
After 4 weeks placebo treatment	0.32 (± 0.18)	0.29 (± 0.15)		

Statistical analyses

Statistical analysis title	H reflex/Motor response H/M ratio values evolution
Comparison groups	4 weeks Sativex and 4 weeks Placebo v 4 weeks Placebo and 4 weeks Sativex
Number of subjects included in analysis	34
Analysis specification	Pre-specified
Analysis type	equivalence ^[1]
P-value	= 0.405
Method	T-test

Notes:

[1] - There was no significant difference between change from baseline to week 4 in the H/M ratio score (p=0.405) under treatment with Sativex or placebo. No significant effect of sequence of treatment was observed
