

Clinical trial results:

BAX326 (recombinant factor IX): a phase 2/3, prospective, uncontrolled, multicenter study evaluating pharmacokinetics, efficacy, safety, and immunogenicity in previously treated pediatric patients with severe (FIX level <1%) or moderately severe (FIX level 1-2%) hemophilia B

Summary

EudraCT number	2011-002437-19
Trial protocol	GB BG

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001139-PIP01-11
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes
--	-----

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 August 2013
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	14 May 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate all adverse events possibly or probably related to BAX326

Protection of trial subjects:

This study was conducted in accordance with the clinical protocol, the International Conference on Harmonization Guideline for Good Clinical Practice E6 (ICH GCP, April 1996), Title 21 of the US Code of Federal Regulations (US CFR), the European Clinical Trial Directive (2001/20/EC and 2005/28/EC), and applicable national and local regulatory requirements.

There were 2 age cohorts: <6 years and 6 to <12 years. To reduce the burden of frequent blood sampling on the individual subject for the pharmacokinetic assessment (total of 7 post-infusion sampling time points over 72 hours), subjects within each age cohort were randomized to one of 2 blood sampling sequences of 4 post-infusion blood sampling time points each.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 December 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 5
Country: Number of subjects enrolled	Romania: 5
Country: Number of subjects enrolled	Ukraine: 3
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	Russian Federation: 7
Country: Number of subjects enrolled	India: 1
Worldwide total number of subjects	23
EEA total number of subjects	12

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	23
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Enrollment was conducted at 11 clinical sites in 6 countries (United Kingdom, Poland, Romania, Russian Federation, Ukraine, India). A total of 23 subjects were enrolled in the study. Of these, 11 were <6 years of age and 12 were 6 to <12 years of age.

Pre-assignment

Screening details: -

Pre-assignment period milestones

Number of subjects started	23
Number of subjects completed	23

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Paediatric subjects <6 years of age

Arm description:

Subjects in this cohort had their pharmacokinetic infusion with BAX326 in the morning and were assigned to the following 4 post-infusion blood sampling time points: 15-30 min, 7±1 hour(s), anytime during the 2nd day, anytime during the 3rd day

Arm type	Experimental
Investigational medicinal product name	BAX326 (recombinant factor IX)
Investigational medicinal product code	
Other name	Rixubis
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects underwent a pharmacokinetic evaluation with BAX326 (1 infusion) which was followed by a twice weekly prophylactic treatment with BAX326. Bleeding episodes were also treated with BAX326.

Arm title	Paediatric subjects 6 to <12 years of age
------------------	---

Arm description:

Subjects in this cohort had their pharmacokinetic infusion with BAX326 in the afternoon and were assigned to the following 4 post-infusion blood sampling time points: 15-30 min, 4±1 hour(s), anytime during the 2nd day, morning of the 4th day

Arm type	Experimental
Investigational medicinal product name	BAX326 (recombinant factor IX)
Investigational medicinal product code	
Other name	Rixubis
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects underwent a pharmacokinetic evaluation with BAX326 (1 infusion) which was followed by a twice weekly prophylactic treatment with BAX326. Bleeding episodes were also treated with BAX326.

Number of subjects in period 1	Paediatric subjects <6 years of age	Paediatric subjects 6 to <12 years of age
Started	11	12
Completed	11	11
Not completed	0	1
Consent withdrawn by subject	-	1

Primary: Adverse events (AEs) possibly or probably related to BAX326

End point title	Adverse events (AEs) possibly or probably related to BAX326 ^[1]
End point description: Probable, possible, or unknown causality assessment of an AE were to be counted as "related". AEs that occurred during or after treatment application were presented in summary tables. An overview summary table presented the number (%) of AEs, the number (%) of subjects with AEs by seriousness, severity, and relationship to the study product. Descriptive statistics were presented by age stratum.	
End point type	Primary
End point timeframe: Approximately 7 months per subject	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Per protocol, descriptive statistics were collected for this endpoint.

Controlled with 3 or more infusions	1	2	3	

Notes:

[6] - 7 subjects <6 yrs had total of 11 bleeding episodes after first BAX326 exposure which were treated

[7] - 7 subjects 6 - <12 yrs had 15 bleeding episodes after first BAX326 exposure which were treated

[8] - 14 subjects in FAS had total of 26 bleeding episodes after first BAX326 exposure which were treated

Statistical analyses

No statistical analyses for this end point

Secondary: Haemostatic efficacy: Treatment of bleeding episodes: overall haemostatic efficacy rating at resolution of bleed

End point title	Haemostatic efficacy: Treatment of bleeding episodes: overall haemostatic efficacy rating at resolution of bleed
-----------------	--

End point description:

Rating Scale for Treatment of BEs (4-point ordinal scale):

- Excellent: Full relief of pain and cessation of objective signs of bleeding (eg, swelling, tenderness, and decreased range of motion in the case of musculoskeletal hemorrhage) after a single infusion. No additional infusion required for the control of bleeding. Administration of further infusions to maintain hemostasis did not affect this scoring.
- Good: Definite pain relief and/or improvement in signs of bleeding after a single infusion. Possibly requires more than 1 infusion for complete resolution.
- Fair: Probable and/or slight relief of pain and slight improvement in signs of bleeding after single infusion. Required more than 1 infusion for complete resolution.
- None: No improvement or condition worsens.

The Peds-QL is a generic HR QoL instrument designed specifically for a paediatric population. It captures the following domains: general health/activities, feelings/emotional, social functioning, school functioning. For this study, the Peds-QL questionnaires for subjects 2 to 7 years of age (parent-proxy versions for age groups 2-4 years and 5-7 years) and for subjects 8 to 12 years of age were used. Higher scores indicate better quality of life for all domains of the Peds-QL.

End point type	Secondary
----------------	-----------

End point timeframe:

Approximately 6 months per subject

End point values	Full Analysis Set			
Subject group type	Subject analysis set			
Number of subjects analysed	23 ^[18]			
Units: score				
arithmetic mean (standard deviation)				
Peds-QL 2-4	3.27 (± 10.119)			
Peds-QL 5-7	-7.07 (± 6.917)			
PedsQL 8-12	4.02 (± 11.038)			

Notes:

[18] - Results for 4 subjects 2-4 years, 2 subjects 5-7 years and 10 subjects 8-12 years

Statistical analyses

No statistical analyses for this end point

Secondary: HRQoL: Haemo-QoL (short version): Change from baseline in total score

End point title	HRQoL: Haemo-QoL (short version): Change from baseline in total score
End point description:	The Haemo-QoL instrument assesses specific aspects of dealing with haemophilia. The areas covered by this instrument are: physical health, sports/leisure, school, dealing with haemophilia, and outlook for the future. For this study, the Haemo-QoL for subjects 8-16 years of age was used. Higher scores indicate worse quality of life.
End point type	Secondary
End point timeframe:	Approximately 6 months per subject

End point values	Full Analysis Set			
Subject group type	Subject analysis set			
Number of subjects analysed	23 ^[19]			
Units: score				
arithmetic mean (standard deviation)	-0.18 (± 0.456)			

Notes:

[19] - Results are only available for 10 subjects >8 years of age.

Reporting groups

Reporting group title	Paediatric subjects less than 6 years of age
-----------------------	--

Reporting group description:

Subjects in this cohort had their pharmacokinetic infusion with BAX326 in the morning and were assigned to the following 4 post-infusion blood sampling time points: 15-30 min, 7±1 hour(s), anytime during the 2nd day, anytime during the 3rd day

Reporting group title	Paediatric subjects between 6 and less than 12 years of age
-----------------------	---

Reporting group description:

Subjects in this cohort had their pharmacokinetic infusion with BAX326 in the afternoon and were assigned to the following 4 post-infusion blood sampling time points: 15-30 min, 4±1 hour(s), anytime during the 2nd day, anytime during the 3rd day

Serious adverse events	Paediatric subjects less than 6 years of age	Paediatric subjects between 6 and less than 12 years of age	
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 11 (0.00%)	3 / 12 (25.00%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events	0	0	
Injury, poisoning and procedural complications			
Humerus fracture			
subjects affected / exposed	0 / 11 (0.00%)	1 / 12 (8.33%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Skin and subcutaneous tissue disorders			
Haemorrhage subcutaneous
