Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 February 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 February 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the effect of MEDI8968 on the rate of moderate or severe acute exacerbations of chronic obstructive pulmonary disease (AECOPD) in adult participants with symptomatic, moderate to very severe COPD (Global Initiative for Chronic Obstructive Lung Disease - GOLD stage II-IV) receiving standard maintenance therapy for their disease.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization guideline E6: Good Clinical Practice. Participating participant signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy:

All participants received double or triple background maintenance therapy (tiotropium vs budesonide/formoterol 160/4.5 microgram (mcg) versus budesonide/formoterol 160/4.5 mcg + tiotropium).

Evidence for comparator: -

Actual start date of recruitment	11 November 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Safety, Safety, Safety, Safety, Safety, Safety, Safety, Safety, Safety
Long term follow-up duration	4 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 44
Country: Number of subjects enrolled	Bulgaria: 41
Country: Number of subjects enrolled	Czech Republic: 30
Country: Number of subjects enrolled	Hungary: 47
Country: Number of subjects enrolled	Latvia: 7
Country: Number of subjects enrolled	Lithuania: 24
Country: Number of subjects enrolled	Philippines: 17
Country: Number of subjects enrolled	Ukraine: 46
Country: Number of subjects enrolled	United Kingdom: 6
Country: Number of subjects enrolled	United States: 62

Worldwide total number of subjects	324
EEA total number of subjects	199

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	189
From 65 to 84 years	135
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 464 participants were screened and 324 participants were randomized into the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo
------------------	---------

Arm description:

Placebo matched to MEDI8968 as intravenous (IV) infusion on Day 1 followed by subcutaneous (SC) injection every 4 weeks up to Week 53.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for infusion
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

Placebo matched to MEDI8968 as intravenous (IV) infusion on Day 1 followed by subcutaneous (SC) injection every 4 weeks up to Week 53.

Arm title	MEDI8968 600 mg IV on day 1, followed by 300 mg SC
------------------	----------------------------------------------------

Arm description:

MEDI8968 600 milligram (mg) as IV infusion on Day 1 followed by 300 mg injection SC every 4 weeks up to Week 53.

Arm type	Experimental
Investigational medicinal product name	MEDI8968
Investigational medicinal product code	MEDI8968
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for infusion
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

MEDI8968 600 milligram (mg) as IV infusion on Day 1 followed by 300 mg injection SC every 4 weeks up to Week 53.

Number of subjects in period 1	Placebo	MEDI8968 600 mg IV on day 1, followed by 300 mg SC
Started	164	160
Completed	130	120
Not completed	34	40
Adverse event, serious fatal	3	6
Consent withdrawn by subject	13	21
Unspecified	15	12
Lost to follow-up	3	1

Number of subjects analysed	164	160		
Units: AECOPD events/person-year				
least squares mean (confidence interval 90%)	0.14 (0.09 to 0.21)	0.1 (0.06 to 0.16)		

Statistical analyses

No statistical analyses for this end point

Secondary: Time to First Moderate or Severe Acute Exacerbations of Chronic Obstructive Pulmonary Disease (AECOPD)

End point title	Time to First Moderate or Severe Acute Exacerbations of Chronic Obstructive Pulmonary Disease (AECOPD)
-----------------	--------------------------------------------------------------------------------------------------------

End point description:

Time to first worsening of two or more major symptoms or one major and one minor symptom for two or more consecutive days. The severity of an AECOPD is defined as: Mild exacerbations require treatment with an increase in usual therapy, e.g., increase use of short acting bronchodilators. Moderate exacerbations require treatment with systemic corticosteroids, and or antibiotics. Severe exacerbations require hospitalization. '99999' in the below table indicates median and upper limit of 95% confidence interval (CI). Median and upper limit of 95% CI were not evaluable as less than 50% of the participants had moderate or severe AECOPD, thus not applicable (NA) = '99999'.

End point type	Secondary

Secondary: Change from Baseline in COPD-Specific Saint George's Respiratory Questionnaire (SGRQ-C) Total and Subscales Scores at Week 53

End point title	Change from Baseline in COPD-Specific Saint George's Respiratory Questionnaire (SGRQ-C) Total and Subscales Scores at Week 53
-----------------	-------------------------------------------------------------------------------------------------------------------------------

End point description:

The SGRQ is a health related quality of life questionnaire consisting of 40 items in three domains: symptoms (respiratory symptoms and severity), activity (activities that cause or are limited by breathlessness) and impacts (social functioning and psychological disturbances due to airway disease). Each question's response has a unique empirically derived weight where lowest possible weight is zero and the highest is 100. The total score and domain score are derived from the relevant items and converted to a score of 0 to 100 with a higher score indicating poorer health status.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline and Week 53

End point values	Placebo	MEDI8968 600 mg IV on day 1, followed by 300 mg SC		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	164	160		
Units: units on scale				
least squares mean (standard error)				
Change at Week 53: Total Score (n=134, 123)	-2.76 (± 1.069)	-2.22 (± 1.101)		
Change at Week 53: Activity Score (n=134, 123)	-1.15 (± 1.306)	-1.38 (± 1.348)		
Change at Week 53: Impacts Score (n=134, 123)	-2.91 (± 1.326)	-1.08 (± 1.366)		
Change at Week 53: Symptoms Score (n=134, 123)	-5.6 (± 1.279)	-6.81 (± 1.325)

Secondary: Change from Baseline in Body Mass Index, Airflow Obstruction, Dyspnea, and Exercise Capacity (BODE) Score at Week 53

End point title	Change from Baseline in Body Mass Index, Airflow Obstruction, Dyspnea, and Exercise Capacity (BODE) Score at Week 53
-----------------	----------------------------------------------------------------------------------------------------------------------

End point description:

The BODE index is a multi-dimension COPD grading system that incorporates body-mass index (B), degree of airflow obstruction (O), dyspnea (D), and exercise capacity (E) as measured by the modified medical research council (MMRC) dyspnea scale and the 6-minute walk test. The MMRC dyspnea scale is a 5-point scale that measures the level of dyspnea (trouble breathing) experienced by participants where score range is 0 (none) to 4 (very severe). BODE score is derived into a score range of 0 (healthy) to 10 (severe COPD).

End point type	Secondary

End point title	Number of Participants Reporting Treatment-Emergent Adverse Events (TEAEs) and Treatment-Emergent Serious Adverse Events (TESAEs)
-----------------	-----------------------------------------------------------------------------------------------------------------------------------

End point description:

An adverse event (AE) was any untoward medical occurrence in a participant who received study drug without regard to possibility of causal relationship. A serious adverse event (SAE) was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. Treatment-emergent are events between administration of study drug and up to Week 69 that were absent before treatment or that worsened relative to pre-treatment state. TEAEs reported below included both SAEs and non-serious AEs.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 August 2011	The blood collection plan for this analysis was modified due to difficulties in the logistics of collecting and processing samples. Including a smaller number of subjects was considered adequate for this as this was an exploratory analysis.
03 October 2011	Added exclusion criterion 27 that subjects with "uncontrolled, clinically significant history of liver disease or elevated aspartate aminotransferase (AST) or alanine aminotransferase (ALT) greater than or equal to ($>$) 1.5 * upper limit of normal (ULN) at screening" were to be excluded. Added that "Subjects who have AST or ALT $>$ 3 * ULN and evidence of hepatic impairment (total bilirubin $>$ 2 \times the ULN or INR $>$ 1.5) confirmed by repeat test within 48 hours" were to be withdrawn. Added text around the administration of an inactivated influenza vaccine, including that subjects may have received an egg-free inactivated influenza vaccination. Added Clinical Global Impression of Exacerbation Severity to assessment of AECOPD.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
