Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 July 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 July 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the overall response rate (ORR), including partial response (PR) and complete response (CR), of participants treated with MEDI-551 when used in combination with ifosfamide-carboplatin-etoposide (ICE) or dexamethasone-cytarabine-cisplatin (DHAP) versus rituximab in combination with ICE or DHAP in participants with relapsed or refractory diffuse large B-cell lymphoma (DLBCL).

Protection of trial subjects:

The conduct of this clinical study met all local and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and are consistent with International Conference on Harmonization guideline: Good Clinical Practice and applicable regulatory requirements. Participants signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 February 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 84
Country: Number of subjects enrolled	Canada: 8
Country: Number of subjects enrolled	Czech Republic: 7
Country: Number of subjects enrolled	France: 13
Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Hungary: 11
Country: Number of subjects enrolled	Israel: 7
Country: Number of subjects enrolled	Poland: 13
Country: Number of subjects enrolled	Russian Federation: 8
Country: Number of subjects enrolled	Spain: 25
Country: Number of subjects enrolled	Turkey: 7
Worldwide total number of subjects	187
EEA total number of subjects	73

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	138
From 65 to 84 years	49
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted from 27Feb2012 to 17Jun2016.

Pre-assignment

Screening details:

A total of 256 participants were screened, of which 187 participants were randomized in the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Rituximab+ ICE/DHAP

Arm description:

Participants received Rituximab in combination with ifosfamide + carboplatin + etoposide (ICE) or dexamethasone + cisplatin + cytarabine (DHAP) for 3 cycles (21-day cycles) and were followed until end of the study (36 months after the date of randomization for last participant, or date the sponsor stops the trial, whichever occurs first). Rituximab (375 mg/m²) was administered intravenous (IV) on 2 days before the start of Cycle 1 and on Day 1 of each cycle. After completion of rituximab, IV infusion of ICE as: ifosfamide 5 g/ m² continuously for 24 hours with mesna on Day 2; carboplatin AUC=5 mg/mL x min (800 mg maximum) on Day 2; etoposide 100 mg/ m² on Days 1, 2, and 3 in 21-day cycles. After completion of rituximab, IV infusion of DHAP as: dexamethasone 40 mg on Days 1, 2, 3, and 4; cisplatin 100 mg/m² continuously for 24 hours on Day 1; cytarabine 2 g/m² in 3-hour infusion repeated after 12 hours (2 doses) on Day 2 in 21-day cycles.

Arm type	Active comparator
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab (375 mg/m²) was administered intravenous (IV) on 2 days before the start of Cycle 1 and on Day 1 of each cycle.

Arm title	MEDI-551 2 mg/kg + ICE/DHAP
------------------	-----------------------------

Arm description:

Participants received MEDI-551 (2 mg/kg) in combination with ICE or DHAP for 3 cycles (21-day cycles) and were followed until end of the study (36 months after the date of randomization for last participant, or date the sponsor stops the trial, whichever occurs first). MEDI-551 (2 mg/kg) was administered IV on 7 days before the start of Cycle 1 and on Day 1 of each cycle. After completion of MEDI-551, IV infusion of ICE as: ifosfamide 5 g/ m² continuously for 24 hours with mesna on Day 2; carboplatin AUC=5 mg/mL x min (800 mg maximum) on Day 2; etoposide 100 mg/ m² on Days 1, 2, and 3 in 21-day cycles. After completion of MEDI-551, IV infusion of DHAP as: dexamethasone 40 mg on Days 1, 2, 3, and 4; cisplatin 100 mg/m² continuously for 24 hours on Day 1; cytarabine 2 g/m² in 3-hour infusion repeated after 12 hours (2 doses) on Day 2 in 21-day cycles.

Arm type	Experimental
Investigational medicinal product name	MEDI-551 2 mg/kg
Investigational medicinal product code	
Other name	Inebilizumab
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

MEDI-551 (2 mg/kg) was administered IV on 7 days before the start of Cycle 1 and on Day 1 of each cycle.

Arm title	MEDI-551 4 mg/kg + ICE/DHAP
------------------	-----------------------------

Arm description:

Participants received MEDI-551 (4 mg/kg) in combination with ICE or DHAP for 3 cycles (21-day cycles) and were followed until end of the study (36 months after the date of randomization for last participant, or date the sponsor stops the trial, whichever occurs first). MEDI-551 (4 mg/kg) was administered IV on 7 days before the start of Cycle 1 and on Day 1 of each cycle. After completion of MEDI-551, IV infusion of ICE as: ifosfamide 5 g/ m² continuously for 24 hours with mesna on Day 2; carboplatin AUC=5 mg/mL x min (800 mg maximum) on Day 2; etoposide 100 mg/ m² on Days 1, 2, and 3 in 21-day cycles. After completion of MEDI-551, IV infusion of DHAP as: dexamethasone 40 mg on Days 1, 2, 3, and 4; cisplatin 100 mg/m² continuously for 24 hours on Day 1; cytarabine 2 g/m² in 3-hour infusion repeated after 12 hours (2 doses) on Day 2 in 21-day cycles.

Arm type	Experimental
Investigational medicinal product name	MEDI-551 4 mg/kg
Investigational medicinal product code	
Other name	Inebilizumab
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

MEDI-551 (4 mg/kg) was administered IV on 7 days before the start of Cycle 1 and on Day 1 of each cycle.

Subject analysis sets

Subject analysis set title	MEDI-551
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Participants were received MEDI-551 2 mg/kg or 4 mg/kg by IV infusion. Recommended MEDI-551 dose was selected based on the DMC reviews. As there is no data available for the 107 participants presented for the endpoint accepted dose of MEDI-551, I have included the arbitrary value of '99999' for Age continuous field (arithmetic mean and the standard deviation).

Secondary: Number of Participants With Treatment-emergent Adverse Events (TEAEs) and Treatment-emergent Serious Adverse Events (TESAEs)

End point title	Number of Participants With Treatment-emergent Adverse Events (TEAEs) and Treatment-emergent Serious Adverse Events (TESAEs)
-----------------	--

End point description:

An Adverse Event (AE) is any unfavourable and unintended signs, symptoms, or diseases temporally associated with use of study drug, whether or not considered related to study drug. SAE is any AE that resulted in death, inpatient hospitalization or prolongation of existing hospitalization, persistent or significant disability or incapacity, life-threatening, a congenital anomaly/birth defect, or an important medical event. TEAEs are defined as AEs present at baseline that worsened in intensity after administration of study drug, or events absent at baseline that emerged after administration of study

drug, up to 90 days after the end of treatment (EOT). The analysis for this end point was based on safety population, which included all participants who received any study treatment.

Reporting groups

Reporting group title	Rituximab+ ICE/DHAP
-----------------------	---------------------

Reporting group description:

Participants received Rituximab in combination with ifosfamide + carboplatin + etoposide (ICE) or dexamethasone + cisplatin + cytarabine (DHAP) for 3 cycles (21-day cycles) and were followed until end of the study (36 months after the date of randomization for last participant, or date the sponsor stops the trial, whichever occurs first). Rituximab (375 mg/m²) was administered intravenous (IV) on 2 days before the start of Cycle 1 and on Day 1 of each cycle. After completion of rituximab, IV infusion of ICE as: ifosfamide 5 g/ m² continuously for 24 hours with mesna on Day 2; carboplatin AUC=5 mg/mL x min (800 mg maximum) on Day 2; etoposide 100 mg/ m² on Days 1, 2, and 3 in 21-day cycles. After completion of rituximab, IV infusion of DHAP as: dexamethasone 40 mg on Days 1, 2, 3, and 4; cisplatin 100 mg/m² continuously for 24 hours on Day 1; cytarabine 2 g/m² in 3-hour infusion repeated after 12 hours (2 doses) on Day 2 in 21-day cycles.

Reporting group title	MEDI-551 4 mg/kg + ICE/DHAP
-----------------------	-----------------------------

Reporting group description:

Participants received MEDI-551 (4 mg/kg) in combination with ICE or DHAP for 3 cycles (21-day cycles) and were followed until end of the study (36 months after the date of randomization for last participant, or date the sponsor stops the trial, whichever occurs first). MEDI-551 (4 mg/kg) was administered IV on 7 days before the start of Cycle 1 and on Day 1 of each cycle. After completion of MEDI-551, IV infusion of ICE as: ifosfamide 5 g/ m² continuously for 24 hours with mesna on Day 2; carboplatin AUC=5 mg/mL x min (800 mg maximum) on Day 2; etoposide 100 mg/ m² on Days 1, 2, and 3 in 21-day cycles. After completion of Inebilizumab, IV infusion of DHAP as: dexamethasone 40 mg on Days 1, 2, 3, and 4; cisplatin 100 mg/m² continuously for 24 hours on Day 1; cytarabine 2 g/m² in 3-hour infusion repeated after 12 hours (2 doses) on Day 2 in 21-day cycles.

Reporting group title	MEDI-551 2 mg/kg + ICE/DHAP
-----------------------	-----------------------------

Reporting group description:

Participants received MEDI-551 (2 mg/kg) in combination with ICE or DHAP for 3 cycles (21-day cycles) and were followed until end of the study (36 months after the date of randomization for last participant, or date the sponsor stops the trial, whichever occurs first). MEDI-551 (2 mg/kg) was administered IV on 7 days before the start of Cycle 1 and on Day 1 of each cycle. After completion of MEDI-551, IV infusion of ICE as: ifosfamide 5 g/ m² continuously for 24 hours with mesna on Day 2; carboplatin AUC=5 mg/mL x min (800 mg maximum) on Day 2; etoposide 100 mg/ m² on Days 1, 2, and 3 in 21-day cycles. After completion of Inebilizumab, IV infusion of DHAP as: dexamethasone 40 mg on Days 1, 2, 3, and 4; cisplatin 100 mg/m² continuously for 24 hours on Day 1; cytarabine 2 g/m² in 3-hour infusion repeated after 12 hours (2 doses) on Day 2 in 21-day cycles.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 February 2013	The Protocol was amended to update the exploratory objectives; Randomization plan and schedule of data monitoring committee (DMC) reviews updated; Number of study centers was increased from 50 to 106; Russia, and Israel were added; and Australia was removed, reflecting current strategy for enrolling the study. The choice of ifosfamide-carboplatin-etoposide (ICE) or dexamethasone-cytarabine-cisplatin (DHAP) as the chemotherapy regimen was made for each participant by the investigator as per institutional standard of care; Study-stopping criteria updated; Updated inclusion and exclusion criteria, withdrawal criteria, and specified replacement of participants criteria. Rituximab was added to ICE and DHAP. Updated treatment assignment and treatment regimen to improve study design. Added information related to MEDI-551 preparation and administration, dose modification for toxicity management, and concomitant medication to improve participants safety. The scheduled of procedures was updated.
11 March 2014	The minimum dose of methylprednisolone was administered before the first infusion of MEDI-551 was changed from 50 mg to 60 mg (or its equivalent), as this is the standard dose for this purpose; Three additional exploratory objectives were added; The total number of participants to be enrolled was increased from 170 to 180; Inclusion Criteria, exclusion Criteria, withdrawal Criteria, dose modification for toxicity management, permitted concomitant medications, schedule of study procedures were updated.
06 March 2015	Previous evaluations of "Full-body fluorodeoxyglucose-positron emission tomography (FDG-PET) scan and chest, abdomen, pelvis, and neck CT scan, unless participant discontinued for progressive disease (PD), tumor measurements, and disease response evaluation" at End of Treatment (+ 14 Days) and Day 60 Post EOT (+/- 7 Days) were changed to evaluation of "Chest, abdomen, pelvis, and neck CT scan, unless participant discontinued for PD" at End of Treatment and Day 90 Post EOT (+/- 14 Days) and evaluation of "Full-body FDG-PET scan (or CT-Pet scan)" at End of Treatment (+ 14 Days). The evaluation of Full-body FDG-PET scan was deleted from Long-term safety evaluations.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
