

Clinical trial results:

REPLACE (Randomized evaluation of fibrinogen versus placebo in complex cardiovascular surgery): a prospective, multinational, multicenter, randomized, double-blind, placebo-controlled, phase III study for the use of Fibrinogen Concentrate (Human) (FCH) in complex cardiovascular surgery

Due to the EudraCT – Results system being out of service between 31 July 2015 and 12 January 2016, these results have been published in compliance with revised timelines.

Summary

EudraCT number	2011-002685-20
Trial protocol	DE GB FI IT AT CZ PL DK
Global end of trial date	11 September 2014

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 October 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 September 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy of FCH treatment in controlling microvascular bleeding during complex cardiovascular surgery.

Protection of trial subjects:

This study was carried out in accordance with the International Conference on Harmonisation Good Clinical Practice guidelines, and standard operating procedures for clinical research and development at CSL Behring. The study protocol and all amendments, the Subject Information Sheet, and the Informed Consent Form were reviewed and approved by the independent ethics committee / and Institutional Review Boards of the participating centers.

Before undergoing screening procedures for possible enrollment into the study, subjects were informed, in an understandable form, about the nature, scope, and possible consequences of the study. The investigator was responsible for obtaining a subject's written informed consent to participate in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 January 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 6
Country: Number of subjects enrolled	United Kingdom: 24
Country: Number of subjects enrolled	Austria: 5
Country: Number of subjects enrolled	Czech Republic: 19
Country: Number of subjects enrolled	Denmark: 6
Country: Number of subjects enrolled	Finland: 12
Country: Number of subjects enrolled	Germany: 6
Country: Number of subjects enrolled	Italy: 5
Country: Number of subjects enrolled	Canada: 21
Country: Number of subjects enrolled	Japan: 48
Worldwide total number of subjects	152
EEA total number of subjects	83

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	72
From 65 to 84 years	77
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

This multinational study enrolled subjects undergoing elective open surgical procedures on any part of the aorta requiring cardiopulmonary bypass. Subjects were enrolled at 34 sites in 11 countries.

Pre-assignment

Screening details:

Screening took place up to 4 weeks before administration of IMP. A total of 579 patients provided written informed consent and 519 eligible subjects were randomized at the start of surgery. Of the 519 randomized subjects, 152 (29.3%) met all intraoperative eligibility criteria and were treated with IMP (FCH arm: n = 78; placebo arm: n = 74).

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	FCH arm

Arm description:

Subjects were administered fibrinogen concentrate, human (FCH).

Arm type	Experimental
Investigational medicinal product name	Fibrinogen concentrate, human
Investigational medicinal product code	FCH
Other name	
Pharmaceutical forms	Powder for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects who met the the intraoperative eligibility criteria were to receive a single intravenous dose within 5 minutes of the completion of the measurement of the 5-minute bleeding mass. The FCH dose was determined individually based on the maximum clot firmness measured 20 to 30 minutes prior to discontinuation of cardiopulmonary bypass and subject body weight.

Arm title	Placebo arm
------------------	-------------

Arm description:

Subjects were administered placebo (0.9% sodium chloride solution).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	0.9% sodium chloride solution
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Single dose of 0.9% sodium chloride solution infused intravenously within 5 minutes at a volume equivalent to that needed for FCH.

Number of subjects in period 1	FCH arm	Placebo arm
Started	78	74
Completed	74	68
Not completed	4	6
Adverse event, serious fatal	1	5
Consent withdrawn by subject	1	-
Surgical intervention due to bleeding	-	1
Adverse event, non-fatal	1	-
Moved to another facility, too unwell to complete	1	-

Baseline characteristics

Reporting groups

Reporting group title	FCH arm

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From screening up to 45 days after the administration of IMP, for subjects who were treated.

Adverse event reporting additional description:

The safety population comprised all randomized subjects who received any quantity of IMP. Adverse Event data are treatment-emergent data unless otherwise noted.

Assessment type	Systematic

Reporting groups

Reporting group title	FCH arm
-----------------------	---------

Reporting group description:

Subjects were administered fibrinogen concentrate, human (FCH).

Reporting group title	Placebo arm
-----------------------	-------------

Reporting group description:

Subjects were administered placebo (0.9% sodium chloride solution).

Serious adverse events	FCH arm	Placebo arm

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 February 2013	<p>The primary purpose of Amendment 1 of the clinical protocol was to allow the enrolment of subjects undergoing reoperation (resternotomy or rethoracotomy). The following main changes were made in this amendment:</p> <ul style="list-style-type: none">• Modification of an exclusion criterion to allow the inclusion of subjects undergoing reoperative aortic procedures (ie, resternotomy and rethoracotomy). Subjects undergoing reoperative aortic surgery at the same anatomic site as the original procedure, such as replacement of a previously placed aortic graft, were to continue to be excluded.• Reduction in the number of assessments requiring blood samples from study subjects.• Inclusion of additional biochemistry assessments.• Addition of health care resource utilization exploratory endpoints.• Clarification of the definition of unblinding, particularly in reference to access by study personnel to the results of fibrinogen assessments.• To clarify statements regarding: clinical procedures and assessments, concomitant medications and analysis populations.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Markers of coagulopathic bleeding (eg, plasma fibrinogen level, platelet count) are likely to be more appropriate indicators of the need for allogeneic blood product transfusion than the 5-minute bleeding mass assessment used in this study.

Notes:
