Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 April 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	21 April 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of study CA204-009 was to evaluate the effect of elotuzumab in combination with bortezomib and dexamethasone, (E-Bd; investigational arm) compared with bortezomib and dexamethasone alone (Bd; control group) in subjects with relapsed/refractory multiple myeloma.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 January 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 26
Country: Number of subjects enrolled	France: 23
Country: Number of subjects enrolled	Italy: 75
Country: Number of subjects enrolled	United States: 61
Worldwide total number of subjects	185
EEA total number of subjects	124

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	83

From 65 to 84 years	101
85 years and over	1

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

185 subjects were enrolled, 152 subjects were randomized. Reasons not randomized: 23 no longer met study criteria, 5 withdrew consent, 2 died, 3 had poor/non-compliance. 150 were treated with study drug. 2 subjects were not treated: 1 withdrawal by subject and 1 physician decision.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Elotuzumab + Bortezomib + Dexamethasone

Arm description:

Elotuzumab: Solution; Intravenous (IV); 10 mg/kg; (Cycles 1 & 2: Days 1, 8 & 15; Cycles 3-8: Days 1 & 11; Cycle 9+: Days 1 & 15); Until subject meets criteria for discontinuation of drug Bortezomib: Solution; IV; 1.3 mg/m²; (Cycles 1 - 8: Days 1, 4, 8, 11; Cycles 9+: Days 1, 8, 15); Until criteria met for discontinuation of drug. Days of Elotuzumab infusion: Dexamethasone (8mg IV + 8mg Oral) administered. Other days Dexamethasone 20 mg Oral administered Dexamethasone: Tablets; 20 mg; (Cycles 1& 2: once daily on Days 2, 4, 5, 8, 9, 11; Cycles 3-8: once daily on Days 2, 4, 5, 9, 12; Cycles 9+: once daily on Days 2, 8, 9, 16); Until criteria met for discontinuation. Dexamethasone: Tablets; 8 mg; (Cycles 1& 2: Days 1, 8, 15; Cycles 3-8: Days 1 & 11; Cycles 9+; Days 1 & 15); Until criteria met for discontinuation of drug. Dexamethasone: Solution; IV; 8 mg; (Cycles 1& 2: Days 1, 8, 15; Cycles 3-8: Days 1 & 11; Cycles 9+; Days 1 & 15); Until criteria met for discontinuation

Arm type	Experimental
Investigational medicinal product name	Bortezomib
Investigational medicinal product code	
Other name	Velcade
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use, Intravenous use

Dosage and administration details:

1.3 mg/m² IV (intravenously) or subcutaneously (SQ)

Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral liquid, Solution for injection
Routes of administration	Oral use, Intravenous use

Dosage and administration details:

Intravenous and po dexamethasone doses are calculated to provide a total dose that is bioequivalent to the 20 mg oral dose (Dexamethasone 8 mg IV is approximately bioequivalent to 11 mg po).

Investigational medicinal product name	Elotuzumab
Investigational medicinal product code	
Other name	EMPLICITI
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

10 mg/kg IV

Arm title	Bortezomib + Dexamethasone
------------------	----------------------------

Arm description:

Bortezomib: Solution; IV; 1.3 mg/m²; (Cycles 1 - 8: Days 1, 4, 8, 11; Cycles 9+: Days 1, 8, 15); Until criteria met for discontinuation of study drug. Dexamethasone: Tablets; 20 mg; (Cycles 1-8 once daily on Days 1, 2, 4, 5, 8, 9, 11, 12; Cycles 9+ once daily on Days 1, 2, 8, 9, 15, 16); Until criteria is met for discontinuation of study drug

Arm type	Active comparator
Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral liquid, Solution for injection
Routes of administration	Oral use, Intravenous use

Dosage and administration details:

Intravenous and po dexamethasone doses are calculated to provide a total dose that is bioequivalent to the 20 mg oral dose (Dexamethasone 8 mg IV is approximately bioequivalent to 11 mg po).

Investigational medicinal product name	Bortezomib
Investigational medicinal product code	
Other name	Velcade
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

1.3 mg/m² IV (intravenously) or subcutaneously (SQ)

Number of subjects in period 1^[1]	Elotuzumab + Bortezomib + Dexamethasone	Bortezomib + Dexamethasone
Started	77	75
Received Treatment	76	74
Completed	0	0
Not completed	77	75
Consent withdrawn by subject	2	5
poor/non-compliance	-	1
Adverse event, non-fatal	2	11
subject request to discontinue treatment	3	5
study drug toxicity	11	14
non-specified	6	4
no longer meets study criteria	1	-
Disease Progression	52	35

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 185 participants were enrolled, 152 participants were randomized. Reasons not randomized: 23 no longer met study criteria, 5 withdrew consent, 2 died, 3 had poor/non-compliance. 150 were treated with study drug. 2 participants were not treated: 1 withdrawal by subject and 1 physician decision.

Primary: Median Investigator-Assessed Progression-free survival (PFS) Time (Months) from Randomization to Date of First Tumor Progression or Death due to any Cause - Randomized Participants

End point title	Median Investigator-Assessed Progression-free survival (PFS) Time (Months) from Randomization to Date of First Tumor Progression or Death due to any Cause - Randomized Participants
End point description:	
PE was planned for after at least 103 events; it was analyzed after 111 events. Response was assessed: Day 1 (± 7 days) of each cycle per modified International Myeloma Working Group (IMWG) criteria; assessed using adequate tumor assessment (ATA) (ie, serum and urine M-protein tests performed within 14 days of each other; imaging if baseline measurable extramedullary plasmacytoma existed). Progression: Any of following: Increase of 25% from lowest response in 1 or more: serum and/or urine M-component; in those without measurable serum and urine M-protein levels, difference between involved and uninvolved free light chain (FLC) levels (absolute increase > 100 mg/L); Bone marrow plasma cell percentage (≥10%). Definite new bone lesions or soft tissue plasmacytomas or definite increase in the size of existing lesions or plasmacytomas. Development of hypercalcemia attributed solely to the plasma cell proliferative disorder.	
End point type	Primary
End point timeframe:	
Randomization until 111 events (disease progression or death), up to May 2014, approximately 2 years

End point description:

PE planned for after at least 103 events (progression/death); analyzed at 111 events. Those who neither progressed nor died were censored on the date of last adequate tumor assessment (ATA), which requires both serum and urine M-protein tests. If no post-baseline tumor assessments/no death, then censored on randomization day. Response assessed: Day 1 (\pm 7 days) each cycle; 30 and 60 days post treatment. Modified IMWG criteria used. Progression: Any of following: Increase of 25% in serum and/or urine M-component; if no measurable serum, urine M-protein levels, then difference between involved and uninvolved free light chain (FLC) levels (absolute increase $>$ 100 mg/L) ; Bone marrow plasma cell percentage (\geq 10%). New bone lesions or soft tissue plasmacytomas or increase in size of existing lesions, plasmacytomas. Development of hypercalcemia attributed solely to plasma cell proliferative disorder. First dose occurs within 3 days of randomization.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 October 2012	Broadening the number of lines of prior therapy from 1 - 2 lines to 1 - 3 and allowing up to 15% of subjects to have had prior non-bortezomib proteasome inhibitor therapy. Broadening the stratification criteria to adapt to these changes, ie, stratification of subjects during randomization will be based on subjects have 1 versus 2 or 3 lines of therapy, instead of 1 versus 2 lines of therapy, and subjects being proteasome inhibitor naive versus having had prior proteasome inhibitor exposure, instead of bortezomib naive versus prior bortezomib exposure. Removal of the exclusion criteria describing subjects with uncontrolled diabetes defined as an HbA1c \geq 8.0 and decreasing the disease-free interval for subjects with other prior malignancy from 5 years to 3 years. The dose modification guideline in reference to the adverse event of bortezomib-related peripheral neuropathy is modified to match the bortezomib Prescribing Information. Clarification that once subjects reach cycle 5 without any Grade 2 infusion reactions, the infusion rate at C5D1 should be increased by 1 mL per minute in a stepwise fashion in each cycle up to a maximum of 5 mL per minute.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
