

Clinical trial results:

A 26 week, randomized, double-blind, parallel-group, active controlled, multicenter, multinational safety study evaluating the risk of serious asthma-related events during treatment with Symbicort®, a fixed combination of inhaled corticosteroid (ICS) (budesonide) and a long acting 2-agonist (LABA) (formoterol) as compared to treatment with ICS (budesonide) alone in adult and adolescent (12 years of age) patients with asthma

Primary completion date	13 October 2015
Global end of trial reached?	Yes
Global end of trial date	13 October 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of the study was to evaluate whether treatment with SYMBICORT pMDI increases the incidence of serious asthma-related events compared to treatment with budesonide alone in adult and adolescent (≥ 12 years of age) patients with persistent asthma.

Protection of trial subjects:

Patients were followed at least on a monthly basis by the research site, either by clinic visits or telephone contacts. Criteria for unstable asthma was assessed between study visits on a daily basis via telephone calls to the Interactive Voice Response System (IVRS). In these telephone calls patients recorded missed days of work/school, rescue medication use, asthma symptoms, ability to perform daily activities and night time awakenings. The patient and, if applicable, the patient's parent/legal guardian was trained by the investigational team and also supplied with written instructions on how to enter data and where to turn if problems occurred. A reminder about intake of study medication was given in connection to the IVRS call. The Investigator received an electronic alert to contact patients with unstable asthma. Patients in need of treatment due to an exacerbation could obtain additional medication while remaining on randomized treatment. Site staff reviewed study medication compliance with the patient at each scheduled study visit (Visits 3, 5 and EoT) and monthly telephone contacts and made a note in Medical records. A daily reminder was also addressed via IVRS. If the patient was not compliant, he or she received additional training on how to use the pMDI. In addition to standard protocolized criteria for discontinuation of investigational product, the study included 3 study-specific discontinuation criteria to optimize safety related to asthma exacerbations: - Experience of more than 1 asthma exacerbation within 13 weeks (during the randomized treatment period) or more than 2 asthma exacerbations within 26 weeks (during the randomized treatment period) will necessitate withdrawal. - A patient whose exacerbation is not responding to therapy in the judgment of the investigator or is not responding to 14 days of treatment with systemic corticosteroids. - A patient requires intubation for asthma.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 December 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	1305
Adults (18-64 years)	9752
From 65 to 84 years	1389
85 years and over	14

Subject disposition

Recruitment

Recruitment details:

This study started with an assessment visit where inclusion/exclusion criteria were reviewed and informed consent obtained. Eligible patients were randomized at the next visit. Patients then entered a 26 weeks double-blind treatment period followed by a 1 week follow-up telephone contact. Patients were recruited in 25 countries with 25% in the US.

Pre-assignment

Screening details:

Eligible adult and adolescent patients were stratified at randomization visit (Visit 2) to one of the two dose levels of Symbicort/budesonide based upon assessment of ACQ and prior asthma therapy. Patients received rescue medication (Albuterol or Salbutamol) throughout the study.

Pre-assignment period milestones

Number of subjects started	12460
Number of subjects completed	11693

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Eligibility criteria not fulfilled: 704
Reason: Number of subjects	Consent withdrawn by subject: 34
Reason: Number of subjects	Other: 29

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Symbicort

Arm description:

Participants were randomized to one of following treatments: Symbicort pMDI 80/4.5 µg x 2 actuations bid (morning and evening) or Symbicort pMDI 160/4.5 µg x 2 actuations bid (morning and evening).

Arm type	Experimental
Investigational medicinal product name	budesonide/formoterol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

pMDI (HFA) for oral inhalation with Actuation Counter Module, 80/4.5µg or 160/4.5µg

Arm title	budesonide
-----------	------------

Arm description:

Participants were randomized to one of following treatments: budesonide pMDI 80 µg x 2 actuations bid (morning and evening) or budesonide pMDI 160 µg x 2 actuations bid (morning and evening).

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	budesonide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

pMDI (HFA) for oral inhalation with Actuation Counter Module (ACM), 80 µg or 160 µg

Number of subjects in period 1^[1]	Symbicort	budesonide
Started	5846	5847
Completed	5785	5766
Not completed	61	81
Adverse event, serious fatal	6	8
Consent withdrawn by subject	53	72
CRF termination module not completed.	-	1
Lost to follow-up	2	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: AEs were not collected unless they lead to discontinuation or qualified as an SAE.

Adverse events

Adverse events information^[1]

Timeframe for reporting adverse events:

Serious adverse events (SAEs) and discontinuation of treatment with investigational product due to adverse event (DAEs) were recorded from the time of informed consent through the treatment period and including the follow-up period.

Adverse event reporting additional description:

AEs were not collected unless they lead to discontinuation or qualified as an SAE.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 December 2011	Revision of sections relating to study committees to clarify that the TDMC was responsible for monitoring the primary safety variable of the study but also all other aspects of safety in the study. Text added to clarify that if a patient was re-screened 3 months or more after the last signing of the ICF, the patient had to re-consent to the study. Additional text added to inclusion criterion 6 to include the ability to read the ACQ6 questionnaire: "Availability and ability to perform the necessary maneuvers and procedures required by the study (eg, read the ACQ6 questionnaire, use a pMDI, and perform daily telephone calls)." Procedures for handling patients incorrectly enrolled or randomized re worded: "Patients who fail to meet the inclusion/exclusion criteria should not, under any circumstances, be enrolled or receive study medication. There can be no exceptions to this rule."
11 April 2013	Text added to clarify instructions for collection and recording of patient's compliance. Procedures for handling patients incorrectly enrolled or randomized were updated to clarify procedures to be taken by AstraZeneca study team, physician, and investigator where minor violations of inclusion or exclusion criteria were detected.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
