##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 August 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 August 2016
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

This was a study of the safety and efficacy of MK-1775 in combination with paclitaxel plus carboplatin in the treatment of ovarian, fallopian tube, and primary peritoneal tumors with the P53 mutation. In Part 1, a small group of participants received MK-1775 along with paclitaxel plus carboplatin to establish the tolerability of MK-1775 with this combination. In Part 2, participants were randomly assigned to receive either MK-1775 plus paclitaxel and carboplatin OR placebo plus paclitaxel and carboplatin to assess efficacy of MK-1775 compared to placebo. The primary hypothesis of the study (Part 2) was that administration of MK-1775 in combination with paclitaxel plus carboplatin in participants with platinum sensitive p53 mutant ovarian cancer would result in improvement in progression free survival (PFS) per enhanced Response Evaluation Criteria In Solid Tumors version 1.1 (enhanced RECIST 1.1) compared to participants treated with paclitaxel plus carboplatin alone.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 July 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Brazil: 5
Country: Number of subjects enrolled	Canada: 34
Country: Number of subjects enrolled	Germany: 17
Country: Number of subjects enrolled	Hungary: 9
Country: Number of subjects enrolled	Israel: 3
Country: Number of subjects enrolled	Sweden: 12
Country: Number of subjects enrolled	Taiwan: 8
Country: Number of subjects enrolled	United Kingdom: 13
Country: Number of subjects enrolled	United States: 22
Country: Number of subjects enrolled	Russian Federation: 13
Worldwide total number of subjects	136
EEA total number of subjects	51

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	94
From 65 to 84 years	42
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Fifteen participants were enrolled in the open label run-in (Part 1) and 121 participants were enrolled separately in the double-blind comparison (Part 2) for a total of 136 participants.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Part 1: MK-1775 225 mg + paclitaxel +carboplatin

Arm description:

During the open-label run-in, participants received 225 mg MK-1775 twice daily (BID) starting on Day 1 of Cycle 1 (cycle=21 days) for a total of 5 doses. Participants received MK-1775 in combination with paclitaxel (175 mg/m<sup>2</sup>) and carboplatin (area under the curve [AUC] 5).

Arm type	Experimental
Investigational medicinal product name	MK-1775
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

MK-1775 capsules, orally twice a day (BID) for a total of 5 doses starting on Day 1 of each 3-week cycle

Investigational medicinal product name	paclitaxel
Investigational medicinal product code	
Other name	Taxol
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

paclitaxel, intravenous (IV) infusion on Day 1 of each 3-week cycle

Investigational medicinal product name	carboplatin
Investigational medicinal product code	
Other name	paraplatin
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

carboplatin, IV infusion on Day 1 of each 3-week cycle

<b>Arm title</b>	Part 2: MK-1775 225 mg + paclitaxel +carboplatin
------------------	--

Arm description:

During Part 2, participants received 225 mg MK-1775 BID starting on Day 1 of each 21 day cycle for a total of 5 doses. Participants received MK-1775 in combination with paclitaxel (175 mg/m<sup>2</sup>) and carboplatin (AUC 5).

Arm type	Experimental
----------	--------------

Investigational medicinal product name	MK-1775

## End points

### End points reporting groups

Reporting group title	Part 1: MK-1775 225 mg + paclitaxel +carboplatin
Reporting group description:	
During the open-label run-in, participants received 225 mg MK-1775 twice daily (BID) starting on Day 1 of Cycle 1 (cycle=21 days) for a total of 5 doses. Participants received MK-1775 in combination with paclitaxel (175 mg/m <sup>2</sup> ) and carboplatin (area under the curve [AUC] 5).	
Reporting group title	Part 2: MK-1775 225 mg + paclitaxel +carboplatin
Reporting group description:	
During Part 2, participants received 225 mg MK-1775 BID starting on Day 1 of each 21 day cycle for a total of 5 doses. Participants received MK-1775 in combination with paclitaxel (175 mg/m <sup>2</sup> ) and carboplatin (AUC 5).	
Reporting group title	Part 2: Placebo + paclitaxel +carboplatin
Reporting group description:	
During Part 2, participants received matched placebo to MK-1775 BID starting on Day 1 of each 21 day cycle for a total of 5 doses. Participants received placebo in combination with paclitaxel (175 mg/m <sup>2</sup> ) and carboplatin (AUC 5).	

### Primary: Part 2: Median Progression-free survival (PFS) in weeks based on Enhanced Response Evaluation Criteria In Solid Tumors version 1.1 (enhanced RECIST 1.1) by Independent Radiology Review

End point title	Part 2: Median Progression-free survival (PFS) in weeks based on Enhanced Response Evaluation Criteria In Solid Tumors version 1.1 (enhanced RECIST 1.1) by Independent Radiology Review <sup>[1]</sup>
End point description:	
PFS was defined as the time from randomization to progressive disease (based on blinded independent central radiologic review) or death, whichever occurred earlier. Tumor response was evaluated every 6 weeks during treatment by diagnostic anatomic imaging and objective response assessments were performed based on enhanced RECIST 1.1 criteria. According to enhanced RECIST 1.1, progressive disease was the appearance of one or more new lesions, OR an unambiguous increase in the sum of target lesion volumes with both 1) >20% increase in the sum of volumes (SOV) of all target lesions (taking as reference the nadir) and 2) greater than two times the variability of the measurements estimated by the sponsor and/or its designees. PFS was analyzed for all randomized Part 2 participants (Intent to Treat [ITT] Population) using the Kaplan-Meier method and median PFS was reported in weeks. Per protocol, Part 1 participants were not included in this analysis.	
End point type	Primary
End point timeframe:	
Up to 57 months	

#### Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: As pre-specified by the protocol, this endpoint reported data for only the Part 2 arms.

End point values	Part 2: MK-1775 225 mg + paclitaxel +carboplatin	Part 2: Placebo + paclitaxel +carboplatin		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	59	62		
Units: weeks				
median (confidence interval 95%)	34.14 (29.86 to 43.14)	31.86 (24.43 to 35.57)		

## Statistical analyses

<b>Statistical analysis title</b>	Part 2 PFS (enhanced RECIST): MK-1775 vs. Placebo
Statistical analysis description: A stratified [number of prior platinum based regimens (1 vs. 2 and 3), time since last platinum based therapy (<12 months vs. ≥12 months)] Cox proportional hazards model, with Efron method of tie handling, was used to assess the magnitude of the treatment difference between the treatment arms. The p-value from the score test was used in the significance test and the hazard ratio (MK-1775 versus Placebo) and its 95% confidence interval (CI) from the same Cox model was reported.	
Comparison groups	Part 2: Placebo + paclitaxel +carboplatin v Part 2: MK-1775 225 mg + paclitaxel +carboplatin
Number of subjects included in analysis	121
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.08
Method	Cox proportional hazards model

upper limit	0.89

## Primary: Part 1: Number of participants with a dose limiting toxicity (DLT)

End point title	Part 1: Number of participants with a dose limiting toxicity (DLT) <sup>[2][3]</sup>
End point description: DLTs assessed during first 21-day cycle of Part 1 and defined as toxicities that met pre-defined severity criteria, were possibly, probably, or definitely related to triplet therapy, and could possibly result in a change in the given dose. Hematologic DLTs included Grade (Gr) 3 or Gr 4 neutropenia with fever >38.5°C and/or infection requiring antibiotic or anti-fungal treatment, and any Gr 4-5 hematological toxicity EXCEPT Gr 4 anemia, leukopenia, lymphopenia, neutropenia lasting <7 days, and thrombocytopenia lasting <4 days, except if a platelet transfusion was required. Non-hematologic DLT defined as any Gr 3, 4, or 5 nonhematologic toxicity EXCEPT: Gr 3 nausea, vomiting, diarrhea, or dehydration judged by Investigator and SPONSOR to occur in setting of inadequate compliance with supportive care measures and last for less than 48 hours, alopecia of any grade, inadequately treated hypersensitivity reactions, or clinically non-significant, treatable or reversible lab abnormalities.	
End point type	Primary
End point timeframe: During Cycle 1 of Part 1 (first 21 days)	

### Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No between-group statistical analyses were planned for this endpoint.

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: As pre-specified by the protocol, this endpoint reported data for only the Part 1 arm.

<b>End point values</b>	Part 1: MK-1775 225 mg + paclitaxel + carboplatin			
Subject group type	Reporting group

### Secondary: Part 1: Objective response rate (ORR) per Gynecological Cancer Intergroup (GCIG) criteria based on both RECIST 1.1 and cancer antigen 125 (CA-125) level by Independent Radiology Review

End point title	Part 1: Objective response rate (ORR) per Gynecological Cancer Intergroup (GCIG) criteria based on both RECIST 1.1 and cancer antigen 125 (CA-125) level by Independent Radiology Review <sup>[7]</sup>
-----------------	---

#### End point description:

ORR was defined as the percentage of participants whose best response was confirmed partial response (PR) or complete response (CR) based both on imaging per RECIST 1.1 and on serum marker CA-125 level according to GCIG criteria. CR was defined by RECIST 1.1 as disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have had reduction in short axis to <10 mm. PR was defined by RECIST 1.1 as at least a 30% decrease in the sum of the diameters (SOD) of target lesions, taking as reference the baseline SOD. A response according to CA-125 had occurred if there was ≥50% reduction in CA-125 levels from a pretreatment sample. The response must have been confirmed and maintained for at least 28 days. Participants could be evaluated according to CA-125 only if they had a pretreatment sample that was ≥2 times the upper limit of normal and within 2 weeks prior to starting treatment. Only evaluable Part 1 participants were analyzed for this endpoint.

End point type	Secondary
----------------	-----------

#### End point timeframe:

Up to 57 months

#### Notes:

[7] - The end point is not reporting statistics for all the arms in the baseline period. Number of subjects analysed	59	62		
Units: percentage of participants				
number (confidence interval 95%)	74.58 (61.6 to 85)	69.35 (56.3 to 80.4)		

## Statistical analyses

Statistical analysis title	Part 2 ORR (enhanced RECIST): MK-1775 vs. Placebo
----------------------------	---

### Statistical analysis description:

Stratified Miettinen and Nurminen's method with a two-sided p-Value for testing was used for comparison of the ORRs between the treatment groups in Part 2 portion of the study. A 95% CI for the difference in response rates was provided.

Comparison groups	Part 2: MK-1775 225 mg + paclitaxel + carboplatin v Part 2: Placebo + paclitaxel + carboplatin
Number of subjects included in analysis	121
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.5247
Method	Miettinen and Nurminen's Method
Parameter estimate	Difference in Response Rate
Point estimate	5.2

Confidence interval	
level	95 %
sides	2-sided
lower limit	-10.9
upper limit	21.1

## Secondary: Part 2: Median Overall survival (OS) in months

End point title	Part 2: Median Overall survival (OS) in months <sup>[11]</sup>
-----------------	--

End point description:

OS was defined as the time from randomization to death due to any cause, reported in months. Participants without documented death at the time of analysis were censored at the date last known to be alive. For this endpoint, all randomized participants in Part 2 were analyzed. Per protocol, Part 1 participants were not evaluated for OS.

Median OS could not be calculated due to a small percentage of death events observed by the time of cut-off analysis date. A value of 9999 indicates that no data were calculated.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to 57 months

Notes:

[11] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: As pre-specified by the protocol, this endpoint reported data for only the Part 2 arms.

<b>End point values</b>	Part 2: MK-1775 225 mg + paclitaxel + carboplatin	Part 2: Placebo + paclitaxel + carboplatin		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	59	62		
Units: months				
median (confidence interval 95%)	9999 (20.34 to 9999)	9999 (9999 to 9999)		

## Statistical analyses

<b>Statistical analysis title</b>	Part 2 OS: MK-1775 vs. Placebo
-----------------------------------	--------------------------------

Statistical analysis description:

A stratified [number of prior platinum based regimens (1 vs. 2 and 3), time since last platinum based therapy (<12 months vs. ≥12 months)] Cox proportional hazards model, with Efron method of tie handling, was used to assess the magnitude of the treatment difference between the treatment arms. The p-value from the score test was used in the significance test and the hazard ratio (MK-1775 versus Placebo) and its 95% CI from the same Cox model was reported.

Comparison groups	Part 2: MK-1775 225 mg + paclitaxel + carboplatin v Part 2: Placebo + paclitaxel + carboplatin
-------------------	--

Number of subjects included in analysis	121
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.8
Method	Cox proportional hazards model
Parameter estimate	Hazard ratio (HR)
Point estimate	1.15
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.4
upper limit	3.34

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Part 1: Day 1 through Post Study (286 days total). Part 2: Day 1 through Post Study (479 days total)

Adverse event reporting additional description:

Part 1: All participants who received at least one dose of study treatment during the open-label period (n=15).

Part 2: All randomized participants who received at least one dose of study treatment (n=119). 2 participants were randomized to the Part 2 placebo arm but were not treated.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	19.0
--------------------	------

### Reporting groups

Reporting group title	Part 1: MK-1775 225 mg + paclitaxel +carboplatin
-----------------------	--

Reporting group description:

During the open-label run-in, participants received 225 mg MK-1775 BID starting on Day 1 of Cycle 1 (cycle=21 days) for a total of 5 doses. Participants received MK-1775 in combination with paclitaxel (175 mg/m<sup>2</sup>) and carboplatin (AUC 5).

Reporting group title	Part 2: Placebo + paclitaxel +carboplatin
-----------------------	---

Reporting group description:

During Part 2, participants received matched placebo to MK-1775 BID starting on Day 1 of each 21 day cycle for a total of 5 doses. Participants received placebo in combination with paclitaxel (175 mg/m<sup>2</sup>) and carboplatin (AUC 5).

Reporting group title	Part 2: MK-1775 225 mg + paclitaxel +carboplatin
-----------------------	--

Reporting group description:

During Part 2, participants received 225 mg MK-1775 BID starting on Day 1 of each 21 day cycle for a total of 5 doses. Participants received MK-1775 in combination with paclitaxel (175 mg/m<sup>2</sup>) and carboplatin (AUC 5).

<b>Serious adverse events</b>	Part 1: MK-1775 225 mg + paclitaxel +carboplatin	Part 2: Placebo + paclitaxel +carboplatin	Part 2: MK-1775 225 mg + paclitaxel +carboplatin

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 April 2012	Amendment 01 (AM1) was implemented primarily to update an inclusion criterion to include participants with primary peritoneal and fallopian tube cancers.
10 June 2013	AM5 was implemented primarily to clarify the requirement of CA-125 during the follow up period.
02 October 2013	AM8 was implemented primarily to re-calculate sample size to expand from 80 to 120 participants for Part 2 of the study and re-estimate the power accordingly. The recruitment timelines were extended 6 more months and 15 sites were added as a result of the change. The change was made without unblinding the trial data.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
