

## Clinical trial results:

### Long-term Safety and Tolerability of REGN727/SAR236553 in High Cardiovascular Risk Patients with Hypercholesterolemia not Adequately Controlled with Their Lipid Modifying Therapy: a Randomized, Double-blind, Placebo-controlled Study

#### Summary

EudraCT number	2011-002806-59
Trial protocol	BE FI SE ES PT DE CZ NO GB NL HU IT DK BG
Global end of trial date	19 November 2014

#### Results information

Result version number	v1 (current)
This version publication date	16 April 2016
First version publication date	16 April 2016

#### Trial information

##### Trial identification

Sponsor protocol code	LTS11717
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01507831
WHO universal trial number (UTN)	U1111-1121-3928
Other trial identifiers	Study Name: ODYSSEY LONG TERM

Notes:

##### Sponsors

Sponsor organisation name	Sanofi aventis recherche & développement
Sponsor organisation address	1 avenue Pierre Brossolette, Chilly-Mazarin , France, 91380
Public contact	Trial Transparency Team, Sanofi aventis recherche & développement, Contact-US@sanofi.com

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 December 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 November 2014
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the long-term safety and tolerability of SAR236553(REGN727) in high cardiovascular (CV) risk subjects with hypercholesterolemia not adequately controlled with their lipid modifying therapy (LMT).

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency.

Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy:

All subjects received a stable dose of statin (rosuvastatin, simvastatin or atorvastatin) with or without other LMT as clinically indicated throughout the duration of study.

Evidence for comparator: -

Actual start date of recruitment	06 January 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 68
Country: Number of subjects enrolled	Norway: 48
Country: Number of subjects enrolled	Poland: 146
Country: Number of subjects enrolled	Portugal: 8
Country: Number of subjects enrolled	Spain: 92
Country: Number of subjects enrolled	Sweden: 32
Country: Number of subjects enrolled	United Kingdom: 484
Country: Number of subjects enrolled	Belgium: 25
Country: Number of subjects enrolled	Bulgaria: 78
Country: Number of subjects enrolled	Czech Republic: 20
Country: Number of subjects enrolled	Denmark: 16
Country: Number of subjects enrolled	Finland: 20
Country: Number of subjects enrolled	France: 87
Country: Number of subjects enrolled	Germany: 139

Country: Number of subjects enrolled	Hungary: 78
Country: Number of subjects enrolled	Italy: 37
Country: Number of subjects enrolled	Argentina: 28
Country: Number of subjects enrolled	Canada: 63
Country: Number of subjects enrolled	Chile: 2
Country: Number of subjects enrolled	Colombia: 2
Country: Number of subjects enrolled	Israel: 8
Country: Number of subjects enrolled	Mexico: 50
Country: Number of subjects enrolled	Romania: 44
Country: Number of subjects enrolled	Russian Federation: 28
Country: Number of subjects enrolled	South Africa: 215
Country: Number of subjects enrolled	Ukraine: 38
Country: Number of subjects enrolled	United States: 485
Worldwide total number of subjects	2341
EEA total number of subjects	1422

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1474
From 65 to 84 years	859
85 years and over	8

## Subject disposition

### Recruitment

#### Recruitment details:

The study was conducted at 320 centers in 27 countries. Overall, 5144 subjects were screened between January 2012 and March 2013, 2801 of whom were screen failures. Screen failures were mainly due to exclusion criteria met. In addition 2 subjects received study drug but did not undergo randomization. They were excluded from analysis.

### Pre-assignment

#### Screening details:

Randomization was stratified as per diagnosis of heterozygous familial hypercholesterolemia (heFH), prior history of myocardial infarction (MI) or ischemic stroke, intensity of statin treatment and geographic region. Assignment to treatment arms was done centrally using an Interactive Voice/Web Response System in a 1:2 ratio (placebo:alirocumab).

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo Q2W

#### Arm description:

Placebo (for alirocumab) subcutaneous (SC) injection every 2 weeks (Q2W) added to stable lipid modifying therapy (LMT) for 78 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

#### Dosage and administration details:

Placebo matched to alirocumab administered as SC injection in the abdomen, thigh, or outer area of the upper arm by self-injection or by another designated person.

<b>Arm title</b>	Alirocumab 150 mg Q2W
------------------	-----------------------

#### Arm description:

Alirocumab 150 mg SC injection Q2W added to stable LMT for 78 weeks.

Arm type	Experimental
Investigational medicinal product name	Alirocumab
Investigational medicinal product code	SAR236553, REGN727
Other name	Praluent
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

#### Dosage and administration details:

Alirocumab administered as SC injection in the abdomen, thigh, or outer area of the upper arm by self-injection or by another designated person.

<b>Number of subjects in period 1</b>	Placebo Q2W	Alirocumab 150 mg Q2W
Started	788	1553
Treated	788	1550
Completed	595	1113
Not completed	193	440
Physician decision	-	4
Adverse Event	48	113
Selection criteria finally not met	-	1
Poor compliance to protocol	38	60
Site closure	-	3
Last visit outside protocol visit window	51	143
Consent withdrawn by subject	34	72
Randomized but not treated	-	3
Death	6	2
Subject moved	5	19
Unspecified	3	6
Lost to follow-up	3	-
Related to study drug administration	5	14

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo Q2W
Reporting group description: Placebo (for alirocumab) subcutaneous (SC) injection every 2 weeks (Q2W) added to stable lipid modifying therapy (LMT) for 78 weeks.	
Reporting group title	Alirocumab 150 mg Q2W
Reporting group description: Alirocumab 150 mg SC injection Q2W added to stable LMT for 78 weeks.	

Reporting group values	Placebo Q2W	Alirocumab 150 mg Q2W	Total
Number of subjects	788	1553	2341
Age categorical			
Units: Subjects			

Age continuous			
Units: years			
arithmetic mean	60.6	60.4	-
standard deviation	± 10.4	± 10.4	
Gender categorical			
Units: Subjects			
Female	314	570	884
Male	474	983	1457
Calculated LDL-C in mg/dL			
Calculated LDL-C in mg/dL from Friedewald formula (LDL-C = Total cholesterol - High-density lipoprotein cholesterol - [Triglyceride/5]).			
Units: mg/dL			
arithmetic mean	121.9	122.7	-
standard deviation	± 41.4	± 42.6	
Calculated LDL-C in mmol/L			
Units: mmol/L			
arithmetic mean	3.157	3.178	-
standard deviation	± 1.073	± 1.102	

## End points

### End points reporting groups

Reporting group title	Placebo Q2W
Reporting group description: Placebo (for alirocumab) subcutaneous (SC) injection every 2 weeks (Q2W) added to stable lipid modifying therapy (LMT) for 78 weeks.	
Reporting group title	Alirocumab 150 mg Q2W
Reporting group description: Alirocumab 150 mg SC injection Q2W added to stable LMT for 78 weeks.	

### Primary: Percentage of Subjects Who Experienced Adverse Events (AEs)

End point title	Percentage of Subjects Who Experienced Adverse Events
End point description: Reported adverse events are treatment-emergent adverse events that is AEs that developed/worsened during the 'treatment-emergent period' (the time from the first dose of study drug up to the last dose of study drug +70 days). Safety population: all randomized subjects who received at least one dose or part of a dose of a study drug (treated).	
End point type	Primary
End point timeframe: Up to 10 weeks after last study drug administration (maximum of 86 weeks)	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Safety analyses were descriptive in nature.	

End point values	Placebo Q2W	Alirocumab 150 mg Q2W		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	788	1550		
Units: percentage of subjects				
number (not applicable)				
Any AE	82.5	81		
Any Serious AE	19.5	18.7		
Any AE leading to death	1.3	0.5		
Any AE leading to treatment discontinuation	5.8	7.2		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Percent Change From Baseline in Calculated LDL-C at Week 24 - Intent-to-Treat (ITT) Analysis

End point title	Percent Change From Baseline in Calculated LDL-C at Week 24 - Intent-to-Treat (ITT) Analysis
End point description: Adjusted least-squares (LS) means and standard errors at Week 24 were obtained from a mixed-effect	

model with repeated measures (MMRM) to account for missing data. All available post-baseline data from Week 4 to Week 52 regardless of status on- or off-treatment were used in the model (ITT analysis). ITT population: all randomized subjects with one baseline and at least one post-baseline calculated LDL-C value on- or off-treatment.

End point type	Secondary
End point timeframe:	
From Baseline to Week 52	

End point values	Placebo Q2W	Alirocumab 150 mg Q2W		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	780	1530		
Units: percent change				
least squares mean (standard error)	0.8 (± 1)	-61 (± 0.7)		

## Statistical analyses

Statistical analysis title	Alirocumab 150 mg Q2W vs Placebo Q2W
Statistical analysis description:	
Alirocumab group was compared to placebo group using an appropriate contrast statement.	
Comparison groups	Alirocumab 150 mg Q2W v Placebo Q2W
Number of subjects included in analysis	2310
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.0001 <sup>[2]</sup>
Method	Mixed models analysis
Parameter estimate	LS mean difference
Point estimate	-61.9
Confidence interval	
level	95 %
sides	2-sided
lower limit	-64.3
upper limit	-59.4

Notes:

[2] - Threshold for significance  $\leq 0.05$ .

## Secondary: Percent Change From Baseline in Calculated LDL-C at Week 24 - On-Treatment Analysis

End point title	Percent Change From Baseline in Calculated LDL-C at Week 24 - On-Treatment Analysis
End point description:	
Adjusted LS means and standard errors at Week 24 were obtained from MMRM model including available post-baseline on-treatment data from Week 4 to Week 52 (i.e. up to 21 days after last injection) (on-treatment analysis). Modified ITT (mITT) population: all randomized and treated subjects with one baseline and at least one post-baseline calculated LDL-C value on-treatment.	
End point type	Secondary
End point timeframe:	
From Baseline to Week 52	

<b>End point values</b>	Placebo Q2W	Alirocumab 150 mg Q2W		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	777	1523		
Units: percent change				
least squares mean (standard error)	0.7 (± 1)	-62.8 (± 0.7)		

## Statistical analyses

<b>Statistical analysis title</b>	Alirocumab 150 mg Q2W vs Placebo Q2W
-----------------------------------	--------------------------------------

Statistical analysis description:

A hierarchical testing procedure was used to control type I error and handle multiple secondary endpoint analyses. Testing was then performed sequentially in the order the endpoints are reported. The hierarchical testing sequence continued only when previous endpoint was statistically significant at 0.05 level.

Comparison groups	Alirocumab 150 mg Q2W v Placebo Q2W
Number of subjects included in analysis	2300
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.0001 <sup>[3]</sup>
Method	Mixed models analysis
Parameter estimate	LS Mean Difference
Point estimate	-63.5
Confidence interval	
level	95 %
sides	2-sided
lower limit	-65.9
upper limit	-61.2

Notes:

[3] - Threshold for significance  $\leq 0.05$ .

## Secondary: Percent Change From Baseline in Calculated LDL-C at Week 12 - ITT Analysis

End point title	Percent Change From Baseline in Calculated LDL-C at Week 12 - ITT Analysis
-----------------	--

End point description:

Adjusted LS means and standard errors at Week 12 from MMRM model including available post-baseline data from Week 4 to Week 52 regardless of status on- or off-treatment. ITT population.

End point type	Secondary

Major adverse CV events were defined as all adverse CV events except Congestive heart failure (CHF) requiring hospitalization; and ischemia-driven coronary revascularization procedure. Safety population.

End point type	Post-hoc
End point timeframe:	
Up to 10 weeks after last study drug administration (maximum of 86 weeks)	

<b>End point values</b>	Placebo Q2W	Alirocumab 150 mg Q2W		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	788	1550		
Units: percentage of subjects				
number (not applicable)	3.3	1.7		

### Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All Adverse Events (AE) were collected from signature of the informed consent form up to the final visit (Week 86 post-treatment follow-up visit) regardless of seriousness or relationship to investigational product.

Adverse event reporting additional description:

Reported AEs and deaths are treatment-emergent that is AEs that developed/worsened and deaths that occurred during 'the treatment emergent period' (from the first dose of study drug up to the last dose of study drug + 70 days).

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
Dictionary version	17.1

### Reporting groups

Reporting group title	Placebo Q2W
-----------------------	-------------

Reporting group description:

Placebo (for alirocumab) SC injection Q2W added to stable LMT for 78 weeks.

Reporting group title	Alirocumab 150 Q2W
-----------------------	--------------------

Reporting group description:

Alirocumab 150 mg SC injection Q2W added to stable LMT for 78 weeks.

Serious adverse events	Placebo Q2W	Alirocumab 150 Q2W	
Total subjects affected by serious adverse events			
subjects affected / exposed	154 / 788 (19.54%)	290 / 1550 (18.71%)	
number of deaths (all causes)	8	7	
number of deaths resulting from adverse events			
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Acute Myeloid Leukaemia			
subjects affected / exposed	1 / 788 (0.13%)	0 / 1550 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 1	0 / 0	
Adenocarcinoma Of Colon

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 November 2011	Additional assessments were added for a possible significant lowering of LDL-C by alirocumab, including adrenal function monitoring and neurological examinations. The monitoring plan for LDL-C <25 mg/dL (0.65 mmol/L) was revised accordingly; Hepatitis C testing was added to the end of the treatment visit because some data suggested that proprotein convertase subtilisin kexin type 9 (PCSK9) negatively regulates CD81 levels ; An ophthalmologic sub-study in a sub-set of subjects and color vision testing in all subjects was added due to the observation of optic nerve degeneration and chorioretinal lesions in 26-week toxicology studies in rats and monkeys, respectively; Measured LDL-C via beta quantification method was added at key efficacy time points due to potential inaccuracies of calculated LDL-C, when the LDL-C level reaches <50 mg/dL (1.30 mmol/L); The exclusion criteria related to LDL-C was changed to <100 mg/dL (2.59 mmol/L), since this exclusion criterion was used in the phase 2 studies, it was viewed as more appropriate to keep the same inclusion criterion in LTS11717, when using the dose of 150 mg every 2 weeks.
11 May 2012	The exclusion criteria of LDL-C >160 mg/dL (4.14 mmol/L) at screening and subject only on statin monotherapy without additional LMT were deleted. Such subjects could be included, but an explanation for no second LMT was to be provided; A guideline was added for medical work up for cases of low hemoglobin (post-baseline decrease of $\geq 15$ g/dL), and an algorithm was added for the identification of cases of hemolytic anemia; Clearer guidance was provided on follow-up of anti-alirocumab antibodies to maintain the integrity of the double-blind in the study; Criterion to meet an LDL-C rescue alert was modified; Clinical criteria for diagnosis of heFH for study eligibility was clarified; A CHD risk equivalent was added to include moderate chronic kidney disease as defined by estimated glomerular filtration rate (eGFR) 30 to <60 mL/min/1.73 m <sup>2</sup> for 3 months or more consistently with the 2011 Guidelines for the Management of Dyslipidaemias by The Task Force for the Management of Dyslipidaemias of the European Society of Cardiology and the European Atherosclerosis Society; Recent information on rare cases of hypersensitivity was added as well as details on monitoring, reporting, and collecting information to better document potential allergy events.
12 November 2012	Exclusion criterion related to LDL-C was changed from <100 mg/dL (2.59 mmol/L) to <70 mg/dL (1.81 mmol/L), thereby including a subject population that more completely represents the expected future clinical use of the compound; Assessments regarding vitamins A, D, and K as other fat soluble vitamins and gonadal hormones assessments were clarified to ensure the integrity of the blood sample and information collected; The description of adrenal function monitoring was updated to recommend early morning sampling to best evaluate this parameter.
26 February 2014	The primary efficacy analysis population was changed to the ITT population and the statistical analysis methodology for the primary and secondary efficacy analysis endpoints was changed to ITT analysis performed on the ITT population and including all lipid values (on-treatment and off-treatment); The language regarding the recording of injection site reactions not related to IMP was updated to clarify the reporting of local injection site reactions.

Notes:

---

## **Interruptions (globally)**

Were there any global interruptions to the trial? No

## **Limitations and caveats**

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Manual reclassification was done by the Sponsor for the "other reasons" of non-completion of study as specified in the electronic case report (eCRF) form.
