Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 June 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 March 2014
Global end of trial reached?	Yes
Global end of trial date	16 April 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this trial is to investigate if roflumilast can reduce the neutrophilic inflammation at acute exacerbations of Chronic Obstructive Pulmonary Disease (COPD). In addition, the potential benefit of roflumilast on severity and recovery periods of acute COPD exacerbations will be assessed using patient diaries and questionnaires.

Protection of trial subjects:

All study participants were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 February 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 81
Worldwide total number of subjects	81
EEA total number of subjects	81

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	18
From 65 to 84 years	57
85 years and over	6

Subject disposition

Recruitment

Recruitment details:

Participants took part in the study at 1 investigative site in the United Kingdom from 16 February 2012 to 25 March 2014.

Pre-assignment

Screening details:

Participants with a diagnosis of Chronic Obstructive Pulmonary Disease (COPD) were enrolled equally in 1 of 2 treatment groups, once a day placebo or roflumilast 500 µg in Cycle 1. Participants were re-randomized in Cycle 2 to once a day placebo or roflumilast 500 µg and are counted as new participants.

Period 1

Period 1 title	Cycle 1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Roflumilast 500 µg

Arm description:

Roflumilast 500 µg tablet, once daily, orally in the morning after breakfast for 4 weeks added on to standard therapy for acute COPD exacerbations. Eligible participants were rerandomized to receive either roflumilast 500 µg or placebo for 4 weeks in Cycle 2.

Arm type	Active comparator
Investigational medicinal product name	Roflumilast
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Roflumilast 500 µg tablet, once daily, orally in the morning after breakfast for 4 weeks.

Arm title	Placebo
------------------	---------

Arm description:

Placebo matching roflumilast tablet, once daily, orally in the morning after breakfast added on to standard therapy for acute COPD exacerbations. Eligible participants were rerandomized to receive either roflumilast 500 µg or placebo for 4 weeks in Cycle 2.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo matching roflumilast tablet, once daily, orally in the morning after breakfast.

Number of subjects in period 1	Roflumilast 500 µg	Placebo
Started	38	43
Completed	27	40
Not completed	11	3
Adverse event, non-fatal	10	2
Withdrawal by Subject	1	1

Period 2

Period 2 title	Cycle 2
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Roflumilast 500 µg

Arm description:

Roflumilast 500 µg tablet, once daily, orally in the morning after breakfast for 4 weeks added on to standard therapy for acute COPD exacerbations.

Arm type	Active comparator
Investigational medicinal product name	Roflumilast
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Roflumilast 500 µg tablet, once daily, orally in the morning after breakfast for 4 weeks.

Arm title	Placebo
------------------	---------

Arm description:

Placebo matching roflumilast tablet, once daily, orally in the morning after breakfast for 4 weeks added on to standard therapy for acute COPD exacerbations.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo matching roflumilast tablet, once daily, orally in the morning after breakfast.

Number of subjects in period 2 ^[1]	Roflumilast 500 µg	Placebo
Started	10	4
Completed	5	4
Not completed	5	0
Adverse event, non-fatal	5	-

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: With Amendment 5, patients previously enrolled in the trial were allowed to be re-enrolled with a new exacerbation, if they reached a stable disease status since completing the first treatment cycle.

Baseline characteristics

Reporting groups

Reporting group title	Roflumilast 500 µg
Reporting group description:	
Roflumilast 500 µg tablet, once daily, orally in the morning after breakfast for 4 weeks added on to standard therapy for acute COPD exacerbations. Eligible participants were rerandomized to receive either roflumilast 500 µg or placebo for 4 weeks in Cycle 2.	
Reporting group title	Placebo

Baseline COPD Assessment Test (CAT)			
Total Score			
The CAT is a short, validated, patient-completed questionnaire to assess the impact of COPD on health status. It comprises 8 questions that cover a broad range of effects of COPD on patients' health. Each question is scored in a range between 0 and 5, with the higher end indicating a higher impact of COPD on the patient's wellbeing. The CAT Total score ranges from 0 (best) to 40 (Worst).

Secondary: Change from Baseline in Sputum Marker Percentage of Eosinophils (Extended Approach)

End point title	Change from Baseline in Sputum Marker Percentage of Eosinophils (Extended Approach)
-----------------	---

End point description:

Sputum samples were collected and processed at the investigational site according to their standard procedures. Aliquots of a cell suspension prepared from the sputum sample were used to prepare cytopspin slides that were stained with Diff-Quik for differential cell counts. 100 cells were counted and the percentage of eosinophils was determined. A negative change from Baseline indicated improvement. Covariates for Mixed Model Repeated Measurement (MMRM) are baseline value, treatment, visit, and treatment by visit interaction.

Participants from the Intent-to-treat population, all randomized participants, with data available at the given time-point. Extended Approach Analysis included all participants who received treatment in Cycle 1 and participants who were re-randomized and received treatment in Cycle 2.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Signing of informed consent until Follow-up Visit (Up to 56 days)

Adverse event reporting additional description:

AEs were analyzed using an Initial Approach (all patients treated in Cycle 1) and an Extended Approach (all patients treated in Cycle 1 and patients re-randomized and treated in Cycle 2). The data from the 2 approaches are entered in one table. Please note: a result of 0 corresponds to no patients with AEs for the preferred term > the 5% threshold.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 November 2011	<ul style="list-style-type: none"> • Oxygen therapy (less than 8 hours daily) was added as allowed concomitant medication in Section 6.8 of the protocol at the request of the Research Ethics Committee. Exclusion criterion E6 'Oxygen therapy (more than 8 hours daily)' remained unchanged, because patients who received home oxygen therapy (more than 8 hours daily) were to be excluded due to possible severe hypoxemia during COPD exacerbation.
16 May 2012	<ul style="list-style-type: none"> • A further objective to investigate the effect of roflumilast on changes in arterial stiffness during recovery from an exacerbation was added. Changes in arterial stiffness from Visit V0 to Visit V2 and Visit V3 were to be measured in a subset of 60 patients by aPWV. A separate patient information sheet and IC were to be signed by patients in this subset. Arterial stiffness has been shown to increase in COPD patients from stable state to exacerbation presentation and remain elevated during the recovery period of the acute exacerbation. As arterial stiffness is a validated measure of cardiovascular risk, and roflumilast is associated with a lower risk of major adverse cardiovascular events, the addition of arterial stiffness measurement was intended to enable exploration of a potential anti-inflammatory effect of roflumilast. • Additional information on standard antibiotic exacerbation treatment was added to include use of antibiotics other than penicillin and clarithromycin in case of allergy or intolerance of these antibiotics. • Additional laboratory parameters were added for standard clinical hematology, coagulation, blood chemistry, and endocrinology tests (erythrocyte mean cell volume, mean cell hemoglobin, and mean cell hemoglobin concentration, prothrombin time, prothrombin time/international normalized ratio, activated partial thromboplastin time, fibrinogen, serum urea, estimated glomerular filtration rate, serum albumin, adjusted serum calcium, inorganic blood phosphate, total cholesterol:high density lipoprotein ratio, serum C reactive protein, serum troponin T, and NT-proBNP). These were to provide additional information on the health status of each patient. Troponin T and NT-proBNP are biomarkers for cardiovascular disease and were of interest for the added arterial stiffness measurements.
16 May 2012	<ul style="list-style-type: none"> • Additional planned statistical analyses were added: aPWV was to be analyzed by MMRM with change from Visit V0 to Visit V2 and Visit V3 as the dependent variable, and the Visit V0 value, treatment indicator, scheduled visit, and treatment-by-visit interaction as independent variables; serum troponin T and NT-proBNP were to be analyzed by ANCOVA with change from Visit V0 to Visit V3 as the dependent variable, and the Visit V0 value and the treatment group as independent variables.
02 November 2012	<ul style="list-style-type: none"> • The potential ADR 'angioedema' was added to the description of the IMP based on a cumulative review of post-marketing reports in which rare ($\geq 1/10,000$ to $< 1/1,000$) cases of angioedema were noted with roflumilast in COPD studies (Updated in accordance with IB V6e, 05 October 2012) • The exclusion criterion E6 'Oxygen therapy (more than 8 hours daily)' was removed because new data were available on the tolerability and safety of roflumilast, indicating that roflumilast could be used in patients with more severe COPD, ie, patients who required long-term oxygen therapy. This information was obtained from the 38 patients randomized in the trial to this point: only 2 withdrawals due to tolerability had occurred, and these were related to insomnia and diarrhea. Allowed concomitant medication 'oxygen therapy (less than 8 hours daily)' was updated to 'oxygen therapy'.
23 November 2012	<ul style="list-style-type: none"> • As a consequence of the merger of Nycomed GmbH with Takeda Pharmaceutical Company Ltd. on 31 October 2011, the sponsor of the trial changed in name and legal entity to Takeda Pharma A/S (Denmark).

28 August 2013	<ul style="list-style-type: none"> • The recruitment period was extended to 2 years. • Exclusion criterion E21 was changed: patients previously enrolled in the trial were allowed to re-enroll with a new exacerbation, provided they had reached a stable disease status since completing the first cycle of trial treatment. Patients with recurrent exacerbations within 8 weeks of a previous exacerbation, and hence unstable disease, could not be re-enrolled. • A new approach to the statistical analyses was introduced, to reflect the change to exclusion criterion E21: the primary and confirmatory analyses were to be performed as originally planned, using the data from patients' first cycle of trial treatment only; all analyses were to be repeated in an exploratory manner including data from both the first cycle and, for re-enrolled patients, the second cycle, and treating re-enrolled patients as if they were new patients. • Storage conditions were specified: IMP was to be stored below 30°
