

Clinical trial results:

A randomized double-blind multiple-dose placebo controlled trial to establish the efficacy of QBX258 (combination of VAK694 and QAX576) in asthma that is inadequately controlled with inhaled corticosteroids and long acting beta agonists

Due to the EudraCT – Results system being out of service between 31 July 2015 and 12 January 2016, these results have been published in compliance with revised timelines.

Summary

EudraCT number	2011-003066-32

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 February 2015
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	27 February 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess whether treatment with QBX258 versus placebo over a 12-week period, in individuals with moderate to severe asthma that is inadequately controlled, leads to significant improvement in the severity of asthma as measured by change in the asthma control questionnaire (ACQ) score at Day 85.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 February 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 14
Country: Number of subjects enrolled	United States: 48
Country: Number of subjects enrolled	United Kingdom: 3
Worldwide total number of subjects	65
EEA total number of subjects	17

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	64

From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants were assigned to either QBX258 or placebo in a 2:1 ratio. Randomization was done by stratification of Q576R.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	QBX258

Arm description:

Participants received QBX258 intravenous (iv) infusion every 4 weeks for up to 4 doses total.

Arm type	Experimental
Investigational medicinal product name	QBX258
Investigational medicinal product code	QBX258
Other name	
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received QBX258 (combination of VAK696, 3mg/kg, and QAX576, 6mg/kg) intravenous (iv) infusion every 4 weeks for up to 4 doses.

Arm title	Placebo
------------------	---------

Arm description:

Participants received placebo to QBX258 iv infusion every 4 weeks for up to 4 doses total.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received placebo (equal volume of 5% dextrose to QBX258) iv infusion every 4 weeks for up to 4 doses total.

Number of subjects in period 1	QBX258	Placebo
Started	44	21
PK analysis set	42	0 ^[1]
Per protocol analysis set	41 ^[2]	20
Completed	42	19
Not completed	2	2
Adverse event, non-fatal	2	1
Protocol deviation	-	1

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The number of subjects for the PK analysis set and Per Protocol analysis set is correct.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The number of subjects for the PK analysis set and Per Protocol analysis set is correct.

Primary: Change from baseline in Asthma Control Questionnaire (ACQ) score

End point title	Change from baseline in Asthma Control Questionnaire (ACQ) score
End point description:	
The ACQ consists of 7 questions assessing symptoms, rescue medication use and lung function. Except for lung function (FEV1), each question was scored on a 7-point scale where 0 = no impairment and 6 = maximum impairment. Scores ranged between 0 totally controlled to 6 (severely uncontrolled). Participants with a score below 1.0 are considered to have adequately controlled asthma. Participants with a score above 1.0 were considered not to be well controlled. A negative change from baseline indicates improvement.

Secondary: Change in Asthma Quality of Life Questionnaire (AQLQ) score

End point title	Change in Asthma Quality of Life Questionnaire (AQLQ) score
End point description: The AQLQ is a 32-item disease specific questionnaire designed to measure functional impairments that are most important to patients with asthma. It consists of 4 domains: symptoms, emotions., exposure to environmental stimuli and activity limitation. Patients were asked to recall their experiences during the previous 2 weeks and to score each item on a 7-point scale. The scale ranges from 1 to 7. The overall AQLQ score was the mean response to all 32 questions. Higher scores represent better outcomes.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 November 2011	Amendment 1 introduced the following changes as requested from the health authority: clarified the period of time following dosing during which women of child-bearing potential were to use highly effective contraception; and introduced a requirement for males to use contraception to minimize potential risk of exposure to the fetus.
16 November 2011	Amendment 2 introduced the following changes: revised the blood volumes to reflect accurate volumes for the central laboratory. The overall blood volume taken during the study was reduced from 559.4 mL to 523.4 mL; and revised inclusion criterion 6 to require a peripheral blood eosinophil count > 140/ μ L combined with serum IgE > 100 IU/mL.
16 January 2012	Amendment 3 introduced the following changes: included a blood sample for Serum IgE to be taken at Screening in order for patients to be eligible as per Inclusion Criterion 6 (introduced at Amendment 2 but requirement for sample to be taken was missed); added a requirement for women of child bearing potential to have a negative pregnancy test result up to 14 days prior to the methacholine challenge (as per the package insert for methacholine); and revised inclusion criterion 7 to note that patients taking antihistamine therapy should withhold their medication prior to skin prick testing.
15 February 2013	Amendment 4 introduced the following changes: revised inclusion criterion 6 to require peripheral blood eosinophil count \geq 140/ μ L and serum IgE \geq 100 IU/mL at Screening, or IgE \geq 400 IU/mL at Screening regardless of eosinophil count (change made to enrich the study population with individuals whose asthma was more likely to be characterized by Th2-type inflammation and therefore were more likely to respond to therapy targeting IL-4 and IL-13); clarified ACQ measurements were to be performed at Visit 3 and added a spirometry measurement (integral to measurement of ACQ) at Visit 3; added body weight measurement to Visit 4 (prior to dosing); revised the first Baseline visit from Days -14 to -4 to Days -14 to -3, to allow all Baseline assessments to be performed on Day -3, where logistically possible; revised dispensing of the eDiary to allow the eDiary to be dispensed at the Screening visit while screening results were obtained; revised exclusion criterion 17 to clarify that travel was restricted not to all of Southeast and Southwest Asia, South America, and Africa, but only to those parts that were endemic for schistosomiasis; revised the study stopping rules for clarification that "study-related SAE" referred to a study drug-related or study procedure-related SAE; added windows for early collection of PK assessment and performance of other study procedures; added more details for the withholding of asthma medications prior to spirometry, FeNO and the methacholine challenge; clarified that local spirometers, as opposed to central spirometry, may have been used for safety monitoring of lung function during induced sputum procedures; and added restriction of nitrate-rich foods and allowed for the consumption of water prior to measurements of FeNO.
19 June 2013	Amendment 5 introduced the following changes: removed the requirement for the methacholine challenge, sputum collection for biomarker assessments, and Elispot PBMC biomarker collection; shortened the Screening period and Run-in period to minimize study durations; clarified the definition of positive stool sample for ova and parasites; revised exclusion criterion 14 to include a more specific value of \leq 12mg/dL; clarified the early withdrawal assessments and procedures for individual patient withdrawal; and revised the analysis of placebo treated patients in the additional explorative analysis on the impact of the Q576R SNP on the QBX258 treatment. Placebo treated patients were not to be pooled but analyzed by their Q576R SNP status.

11 December 2013	Amendment 6 introduced the following changes as requested by the Paul- Ehrlich Institute: included a specific futility analysis in the planned interim analysis, and the definition of change from baseline was updated to the current reporting standard; and added Germany-specific requirements for contraception, to recommend against the use of spermicidals and condoms in this country.
