

## Clinical trial results:

### A prospective, non-controlled, safety trial of intravenous iron isomaltoside 1000 (Monofer®) administered by a high dosing regimen in subjects with inflammatory bowel disease (PROMISE)

Due to the EudraCT – Results system being out of service between 31 July 2015 and 12 January 2016, these results have been published in compliance with revised timelines.

#### Summary

EudraCT number	2011-003121-94
Trial protocol	DK SE NL
Global end of trial date	27 November 2014

#### Results information

Result version number	v1 (current)
This version publication date	15 April 2016
First version publication date	15 April 2016

#### Trial information

##### Trial identification

Sponsor protocol code	P-Monofer-IBD-02
-----------------------	------------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01599702
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 November 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	27 November 2014
Global end of trial reached?	Yes
Global end of trial date	27 November 2014
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the study is to evaluate the safety of a high IV iron dosing regimen of iron isomaltoside 1000 in subjects with IDA secondary to IBD.

Protection of trial subjects:

The protocol and amendments were approved by local ethics committees/Institutional Review Boards and competent authorities. The trial was conducted in accordance with good clinical practice and the Declaration of Helsinki. Informed consent was obtained in writing prior to any trial-related activities.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 July 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 5
Country: Number of subjects enrolled	Sweden: 4
Country: Number of subjects enrolled	Denmark: 12
Worldwide total number of subjects	21
EEA total number of subjects	21

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	19
From 65 to 84 years	2

## Subject disposition

### Recruitment

Recruitment details:

Subjects were screened in the period 24 July 2012 to 4 September 2014. The trial took place at 6 sites: 3 sites in Sweden (no subjects were enrolled at 2 of these sites), 2 in Denmark, and 1 in Netherlands.

### Pre-assignment

Screening details:

Subjects who were  $\geq 18$  years of age, diagnosed with IBD in all activity stages, and with a Hb level of  $< 12$  g/dL for women and Hb  $< 13$  g/dL for men were eligible to participate. Subjects with CRP above the upper limit of normal (ULN) had to have a ferritin level  $< 100$   $\mu\text{g/L}$ , whereas subjects with a CRP  $\leq$  ULN had to have a ferritin level  $< 30$   $\mu\text{g/L}$ .

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Group A1, 1500 mg iron isomaltoside 1000

Arm description:

The single dose of 1500 mg Iron isomaltoside 1000 was administered at baseline in the 1500 mg group. Iron isomaltoside 1000 were diluted in 100 mL normal saline (0.9% sodium chloride) and administered by infusion over approximately 15 min.

Arm type	Experimental
Investigational medicinal product name	Iron isomaltoside 1000
Investigational medicinal product code	ATC code: B03AC
Other name	Monofer, Monover, Monofar, Monoferro
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Based upon the Hb level and body weight, the subjects were divided into 4 treatment groups:

Group A1, women:  $10 \leq \text{Hb} < 12$  g/dL and men:  $11 \leq \text{Hb} < 13$  g/dL with a body weight  $< 70$  kg received 1500 mg iron.

Group A2, women:  $10 \leq \text{Hb} < 12$  g/dL and men:  $11 \leq \text{Hb} < 13$  g/dL with a body weight  $\geq 70$  kg received 2000 mg iron.

Group B1, women:  $\text{Hb} < 10$  g/dL and men:  $\text{Hb} < 11$  g/dL with a body weight  $< 70$  kg received 2500 mg iron.

Group B2, women:  $\text{Hb} < 10$  g/dL and men:  $\text{Hb} < 11$  g/dL with a body weight  $\geq 70$  kg received 3000 mg iron.

The single dose of 1500 mg was administered at baseline, whereas the cumulative doses of 2000 mg were administered in 1 or 2 doses, and the cumulative doses of 2500 mg and 3000 mg were administered in 2 doses. All administrations were diluted in 100 mL normal saline and administered by infusion over app 15 min.

Iron isomaltoside 1000 is available as a dark brown, non-transparent aqueous solution for injection/infusion containing 100 mg iron/mL with pH between 5.0 and 7.0.

<b>Arm title</b>	Group A2, 2000 mg iron isomaltoside 1000
------------------	--

Arm description:

The cumulative doses of 2000 mg were administered in 1 or 2 doses (subjects enrolled according to the original protocol received 2000 mg in one dose, and subjects enrolled according to the amended protocol received 2000 mg in two doses).

Iron isomaltoside 1000 were diluted in 100 mL normal saline (0.9% sodium chloride) and administered by infusion over approximately 15 min.

Arm type	Experimental

## End points

### End points reporting groups

Reporting group title	Group A1, 1500 mg iron isomaltoside 1000
Reporting group description: The single dose of 1500 mg Iron isomaltoside 1000 was administered at baseline in the 1500 mg group. Iron isomaltoside 1000 were diluted in 100 mL normal saline (0.9% sodium chloride) and administered by infusion over approximately 15 min.	
Reporting group title	Group A2, 2000 mg iron isomaltoside 1000
Reporting group description: The cumulative doses of 2000 mg were administered in 1 or 2 doses (subjects enrolled according to the original protocol received 2000 mg in one dose, and subjects enrolled according to the amended protocol received 2000 mg in two doses). Iron isomaltoside 1000 were diluted in 100 mL normal saline (0.9% sodium chloride) and administered by infusion over approximately 15 min.	
Reporting group title	Group B1, 2500 mg iron isomaltoside 1000
Reporting group description: The cumulative dose of 2500 mg were administered in 2 doses. Iron isomaltoside 1000 were diluted in 100 mL normal saline (0.9% sodium chloride) and administered by infusion over approximately 15 min.	
Reporting group title	Group B2, 3000 mg iron isomaltoside 1000
Reporting group description: The cumulative dose of 3000 mg were administered in 2 doses. Iron isomaltoside 1000 were diluted in 100 mL normal saline (0.9% sodium chloride) and administered by infusion over approximately 15 min.	
Subject analysis set title	Safety analysis set
Subject analysis set type	Safety analysis
Subject analysis set description: The safety population (N=21) included all subjects who were randomised and received at least one dose of the trial drug.	

### Primary: Type and incidence of adverse drug reactions

End point title	Type and incidence of adverse drug reactions <sup>[1]</sup>
End point description: Type and incidence of adverse drug reaction.  The analysis was performed on the safety population.	
End point type	Primary
End point timeframe: The endpoint covered the complete trial period.	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: The primary endpoint is type and incidence of adverse drug reactions since this was a safety trial. The endpoint is described purely descriptively and no statistical analysis was performed.	

End point values	Group A1, 1500 mg iron isomaltoside 1000	Group A2, 2000 mg iron isomaltoside 1000	Group B1, 2500 mg iron isomaltoside 1000	Group B2, 3000 mg iron isomaltoside 1000

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From the time a subject had signed the ICF and until he/she had completed the trial, all AEs/SAEs were collected in the CRF.

Adverse event reporting additional description:

All AEs classified as serious and/or related to the study drug were followed by the principle investigator (PI) until the subject had recovered, recovered with sequelae, or died, and until all queries related to the AEs had been resolved. All other AEs were followed by the PI until the subject had recovered or until EOS whichever came first.

Assessment type	Systematic

### Reporting groups

Reporting group title	Group A1, 1500 mg iron isomaltoside 1000
-----------------------	--

Reporting group description:

The single dose of 1500 mg Iron isomaltoside 1000 was administered at baseline in the 1500 mg group. Iron isomaltoside 1000 were diluted in 100 mL normal saline (0.9% sodium chloride) and administered by infusion over approximately 15 min.

Reporting group title	Group A2, 2000 mg iron isomaltoside 1000
-----------------------	--

Reporting group description:

The cumulative doses of 2000 mg were administered in 1 or 2 doses (subjects enrolled according to the original protocol received 2000 mg in one dose, and subjects enrolled according to the amended protocol received 2000 mg in two doses).

Iron isomaltoside 1000 were diluted in 100 mL normal saline (0.9% sodium chloride) and administered by infusion over approximately 15 min.

Reporting group title	Group B1, 2500 mg iron isomaltoside 1000
-----------------------	--

Reporting group description:

The cumulative dose of 2500 mg were administered in 2 doses. Iron isomaltoside 1000 were diluted in 100 mL normal saline (0.9% sodium chloride) and administered by infusion over approximately 15 min.

Reporting group title	Group B2, 3000 mg iron isomaltoside 1000
-----------------------	--

Reporting group description:

The cumulative dose of 3000 mg were administered in 2 doses. Iron isomaltoside 1000 were diluted in 100 mL normal saline (0.9% sodium chloride) and administered by infusion over approximately 15 min.

<b>Serious adverse events</b>	Group A1, 1500 mg iron isomaltoside 1000	Group A2, 2000 mg iron isomaltoside 1000	Group B1, 2500 mg iron isomaltoside 1000
