

Clinical trial results:

A randomized, active-controlled, open-label, multicenter proof-of concept study of intravitreal LFG316 in patients with active non-infectious intermediate-, posterior-, or panuveitis requiring systemic immunosuppressive therapy

Summary

EudraCT number	2011-003254-90
Trial protocol	GB
Global end of trial date	24 August 2017

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 August 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	24 August 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the effect of intravitreal LFG316 on the protocol defined, Day 85 response rate in eyes of patients who met the inclusion criteria.

The above objective applied to the study eye only. A response was defined by any one of the following criteria in the study eye:

- An improvement of 2 or more steps in vitreous haze, relative to baseline, or
- An improvement of 10 or more letters in visual acuity, relative to baseline, or
- An improvement of 2 or more steps in anterior chamber cells score, relative to baseline or
- Absence of chorioretinal lesions as determined by the investigator

Remission (complete response) was defined as any patient who had a vitreous haze score of 0 or 0.5 and who had an anterior chamber cell score of 0 and no chorioretinal lesions in the study eye and was off all immune modulatory therapy (systemic, corticosteroids and topical), without any worsening of uveitis during the trial.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 December 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 6
Country: Number of subjects enrolled	United States: 19
Worldwide total number of subjects	25
EEA total number of subjects	6

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	23
From 65 to 84 years	2
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Approximately 24 patients were planned to be enrolled. A total of 25 patients were randomized (18 patients in LFG316 group and 7 patients in conventional therapy group).

Period 1

Period 1 title	Treatment period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	LFG316

Arm description:

LFG316 administered intravitreally

Arm type	Experimental
Investigational medicinal product name	LFG316
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

The LFG316 solution for injection was a liquid solution.

Arm title	Conventional Therapy
------------------	----------------------

Arm description:

Conventional treatment was selected by the investigator.

Arm type	Active comparator
Investigational medicinal product name	Conventional therapy on site at the discretion of the investigator
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection, Coated tablet, Eye drops, suspension
Routes of administration	Intravitreal use, Intravascular use , Oral use, Subcutaneous use, Intravenous use, Ophthalmic use

Dosage and administration details:

Depending on the conventional medications given, the dosage and administration varied (at the discretion of the investigator).

Number of subjects in period 1	LFG316	Conventional Therapy
Started	18	7
Completed	16	7
Not completed	2	0
Adverse event, non-fatal	2	-

Period 2

Period 2 title	Treatment extension period
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	LFG316_extension period
Arm description: LFG316 administered intravitreally	
Arm type	Experimental
Investigational medicinal product name	LFG316
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

The LFG316 solution for injection was a liquid solution.

Number of subjects in period 2 ^[1]	LFG316_extension period
Started	5
Completed	4
Not completed	1
Administrative problems	1

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Only five patients in the LFG316 group entered the treatment extension period.

Giardiasis subjects affected / exposed occurrences (all)	1 / 18 (5.56%) 1	0 / 7 (0.00%) 0	
Oral candidiasis subjects affected / exposed occurrences (all)	0 / 18 (0.00%) 0	1 / 7 (14.29%) 1	
Pharyngitis subjects affected / exposed occurrences (all)	0 / 18 (0.00%) 0	1 / 7 (14.29%) 1	
Sinusitis subjects affected / exposed occurrences (all)	1 / 18 (5.56%) 1	0 / 7 (0.00%) 0	
Tooth infection subjects affected / exposed occurrences (all)	0 / 18 (0.00%) 0	1 / 7 (14.29%) 1	
Urinary tract infection subjects affected / exposed occurrences (all)	0 / 18 (0.00%) 0	1 / 7 (14.29%) 1	
Viral upper respiratory tract infection subjects affected / exposed occurrences (all)	2 / 18 (11.11%) 2	1 / 7 (14.29%) 1	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 January 2012	This amendment was necessary to address a request from the MHRA. This included modification of the study stopping criteria making them absolute.
18 January 2012	During the course of this trial, a liquid formulation of LFG316 became available and was to be the primary formulation for use in future clinical investigation with LFG316. The CLFG316A2204 protocol at that time only referenced the LFG316 lyophilized powder formulation which was no longer being produced. To assure continuity in study conduct, this amendment included the option to use either formulation with relevant sections updated to reflect this change.
08 July 2014	Due to the difficulty of recruiting patients with multi-focal Choroiditis (MFC), the study population was expanded to include patients with active non-infectious intermediate-, posterior- or panuveitis (NIU) in at least one eye, requiring intensification of systemic immunosuppressive therapy. The Inclusion and Exclusion criteria were modified to reflect this broader uveitis population. The requirement for a score of vitreous haze of 2 was reduced to 1+ at Screening. The study stopping criteria were modified to align with other protocols in the LFG316 program. Safety data from recently completed intravenous and intravitreal studies of LFG316 was added. With respect to planned study assessments, the frequency of fundus photography was reduced as this was no longer necessary to follow the progression of disease. With the shift away from patients with MFC and need to monitor neovascularization, the inclusion of fluorescein angiography was removed. Spectral domain optical coherence tomography (OCT) was added at key time points before and after administration of LFG316 in order to profile the incidence and explore the effect of LFG316 administration on disease pathology such as CME, ERMs and vitreomacular traction associated with NIU. Overall, in consideration of these proposed changes, the risk/benefit profile of LFG316 in patients with NIU was expected to be the same as with the previous MFC population.
22 December 2014	This amendment was necessary to address a request from the UK Health Authority (MHRA). This included an update of the protocol to harmonize with the new Reference Safety Information (RSI) section in the current Investigator's Brochure. With this update, the risk-benefit for patients with NIU remained the same.
07 September 2015	This amendment was implemented to allow a wider range of patients with uveitis the ability to participate in the study, and if they responded, to enable the patients to receive intravitreal LFG316 treatment for a longer period of time. To achieve these, the inclusion criteria and primary endpoint were updated and patients randomized to LFG316, who met the criteria for 'responder' and were willing to continue, were allowed to remain on therapy for an additional 6 months. The secondary endpoints were also updated to measure the mean changes in BCVA, vitreous haze score, anterior chamber cell score, and central retinal thickness and to assess the proportion of responders up to Day 281. To simplify the decision making for potential continuation, the primary endpoint was moved to Day 85 from Day 57. In addition, clarifications to the Exclusion criteria as well as an exploratory objective were proposed.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
