

## Clinical trial results:

**An exploratory, randomized, double blind, placebo controlled, parallel groups Phase II clinical trial to evaluate the efficacy and safety of E-52862 (400 mg) by oral route, as part of an analgesic therapy balanced with morphine, followed by an open label extension, in the treatment of post-operative pain due to abdominal hysterectomy**

### Summary

EudraCT number	2011-003302-24
Trial protocol	ES
Global end of trial date	26 September 2013

### Results information

Result version number	v1 (current)
This version publication date	03 August 2016
First version publication date	03 August 2016

### Trial information

#### Trial identification

Sponsor protocol code	ESTEVE-SIGM-201

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	31 July 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 September 2013
Global end of trial reached?	Yes
Global end of trial date	26 September 2013
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

---

Main objective of the trial:

The primary objective of this study is to assess the analgesic effect of E-52862 compared to placebo on pain following hysterectomy, measured through the morphine consumption administered by Patient Controlled Analgesia (PCA) during the first 24 post-operative hours, pain at rest and movement-evoked pain.

Protection of trial subjects:

The study has been conducted in compliance with the protocol, regulatory requirements, good clinical practice (GCP) and the ethical principles of the latest revision of the Declaration of Helsinki as adopted by the World Medical Association.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 February 2012
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

Country: Number of subjects enrolled	Spain: 121
Worldwide total number of subjects	121
EEA total number of subjects	121

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	121

From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted in Spain, during 13-Feb-2012 (FSFV) and 26-Sep-2013 (LSLV)

### Pre-assignment

Screening details:

Female patients aged between 18 and 80 years, scheduled for an elective non-malignant partial or total abdominal hysterectomy (non laparoscopic) under general anaesthesia (patients with cervix carcinoma stage 1 or endometrial carcinoma stage 1 can be also included)

### Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	E-52862

Arm description:

400 mg once a day , during three days.

Arm type	Experimental
Investigational medicinal product name	E-52862
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

400 mg once a day

<b>Arm title</b>	Control
------------------	---------

Arm description:

1 capsule of placebo once a day , during three days.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

1 capsule of placebo once a day

<b>Number of subjects in period 1</b>	E-52862	Control
Started	60	61
Completed	52	52
Not completed	8	9
Adverse event, non-fatal	1	1
Suspended surgery	2	2
Prohibited Medication	5	6

## Baseline characteristics

### Reporting groups

Reporting group title	Overall Trial
Reporting group description: -	

Reporting group values	Overall Trial	Total	
Number of subjects	121	121	
Age categorical Units: Subjects			
Adults (18-64 years)	121	121	
Age continuous Units: years arithmetic mean standard deviation	46.02 ± 5	-	
Gender categorical Units: Subjects			
Female	121	121	

### Subject analysis sets

Subject analysis set title	Safety analysis set
Subject analysis set type	Safety analysis

Subject analysis set description:

All randomised subjects who receive at least 1 dose of the study drug. Safety analysis will be performed on the safety set.

Subject analysis set title	Per Protocol analysis set
Subject analysis set type	Per protocol

Subject analysis set description:

Subjects who are deemed to have no major protocol violations that could interfere with the objectives of this study.

Reporting group values	Safety analysis set	Per Protocol analysis set	
Number of subjects	121	104	
Age categorical Units: Subjects			
Adults (18-64 years)	121	104	
Age continuous Units: years arithmetic mean standard deviation	46.02 ± 5	46.19 ± 4.95	
Gender categorical Units: Subjects			
Female	121	104	

## End points

### End points reporting groups

Reporting group title	E-52862
Reporting group description: 400 mg once a day , during three days.	
Reporting group title	Control
Reporting group description: 1 capsule of placebo once a day , during three days.	
Subject analysis set title	Safety analysis set

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From the first IMP intake up to two weeks after the last IMP administration .

Adverse event reporting additional description:

Treatment Emergent Adverse Event are displayed. The AEs that occurred after the first IMP intake are going to be considered as treatment emergent AEs (TEAEs).

Assessment type	Systematic
