

Clinical trial results:

A phase II, randomized, observer blind, multicenter study to evaluate the safety and immunogenicity of a single low dose of AS03-adjuvanted, Quebec- or Dresden- manufactured monovalent A/California/7/2009 (H1N1)v-like vaccine in children 3 to less than 10 years old

Summary

EudraCT number	2011-003512-23

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 May 2011
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 August 2010
Global end of trial reached?	Yes
Global end of trial date	31 January 2011
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess whether vaccination with 1 dose of 0.9 µg monovalent A/California/7/2009 (H1N1)v-like HA antigen produced in Quebec adjuvanted with AS03B and 1 dose of monovalent A/California/7/2009 (H1N1)v-like HA antigen produced in Dresden adjuvanted with AS03B; results in an immune response to the vaccine-homologous virus that meets or exceeds the U.S Food and Drug Administration (FDA), Center for Biologics Evaluation and Research (CBER) and the European Medicines Agency (EMA), Committee for Medicinal Products for Human Use (CHMP) guidance targets for pandemic vaccine seroconversion rate (SCR), rate of induction of vaccine-homologous reciprocal hemagglutination inhibition (HI) titers ≥ 40 (potential seroprotection rate [SPR]) and geo-metric mean fold rise (GMFR) 21 days after vaccination in children 3 to < 10 years of age.

Protection of trial subjects:

All subjects were supervised closely for at least 30 minutes following vaccination with appropriate medical treatment readily available. Vaccines were administered by qualified and trained personnel. Vaccines were administered only to eligible subjects that had no contraindications to any components of the vaccines. Subjects were followed-up from the time the subject consents to participate in the study until she/he is discharged.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 July 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Worldwide total number of subjects	209
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	209
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

During the screening the following steps occurred: check for inclusion/exclusion criteria, contraindications/precautions, medical history of the subjects and signing informed consent forms.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind ^[1]
Roles blinded	Assessor, Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Arepanrix 1/2 Group

Arm description:

Healthy male or female children aged 3 to less than (<) 10 years at the time of study vaccination, who received 1 half (1/2) pediatric dose of Arepanrix vaccine at Day 0, administered intramuscularly in the deltoid of the non-dominant arm.

Arm type	Experimental
Investigational medicinal product name	Arepanrix
Investigational medicinal product code	GSK2340274A
Other name	Q-PAN H1N1-AS03 (FluQ)
Pharmaceutical forms	Emulsion for injection
Routes of administration	Intramuscular use

Dosage and administration details:

The vaccine was administered intramuscularly in the deltoid of the non-dominant arm.

Arm title	Pandemrix 1/2 Group
------------------	---------------------

Arm description:

Healthy male or female children aged 3 to less than (<) 10 years at the time of study vaccination, who received 1 half (1/2) pediatric dose of Pandemrix vaccine at Day 0, administered intramuscularly in the deltoid of the non-dominant arm.

Arm type	Experimental
Investigational medicinal product name	Pandemrix
Investigational medicinal product code	GSK2340272A
Other name	D-PAN H1N1-AS03 (FluD)
Pharmaceutical forms	Emulsion for injection
Routes of administration	Intramuscular use

Dosage and administration details:

The vaccine was administered intramuscularly in the deltoid of the non-dominant arm.

Arm title	Arepanrix Group
------------------	-----------------

Arm description:

Healthy male or female children aged 3 to less than (<) 10 years at the time of study vaccination, who received 1 pediatric dose of Arepanrix vaccine at Day 0, administered intramuscularly in the deltoid of the non-dominant arm.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Arepanrix
Investigational medicinal product code	GSK2340274A
Other name	Q-PAN H1N1-AS03 (FluD)
Pharmaceutical forms	Emulsion for injection
Routes of administration	Intramuscular use

Dosage and administration details:

The vaccine was administered intramuscularly in the deltoid of the non-dominant arm.

Notes:

[1] - The roles blinded appear to be inconsistent with a double blind trial.

Justification: This is an observer-blind study which means that during the course of the study, the vaccine recipient (subject) and those responsible for the evaluation of any study endpoint, were all unaware of which vaccine was administered to a particular subject. To do so, vaccine preparation and vaccination was done by authorized medical personnel who did not participate in any of the study clinical evaluation (i.e. assessor).

Primary: Number of seroconverted subjects for haemagglutination inhibition (HI) antibodies against Flu A/CAL/7/09 H1N1 strain

End point title	Number of seroconverted subjects for haemagglutination inhibition (HI) antibodies against Flu A/CAL/7/09 H1N1 strain ^[1]
End point description: Seroconversion rate (SCR) was defined as the proportion of subjects who had either a pre-vaccination reciprocal HI titre below (<) 10 and a post-vaccination reciprocal titre greater than or equal to (≥) 40, or a pre-vaccination reciprocal HI titre ≥ 10 and at least a 4-fold increase in post vaccination reciprocal titre against the vaccine virus. The Flu strain assessed was A/California/7/2009 (H1N1)v-like virus (Flu A/CAL/7/09), following the Committee for Medicinal Products for Human Use (CHMP) and the Center for Biologics Evaluation and Research (CBER) guidance. The CBER criterion was fulfilled if the lower 95% confidence interval (CI) for SCR was (>) 40%. The CHMP criterion was fulfilled if the point estimate for SCR was > 40%.	
End point type	Primary
End point timeframe: At Day 21	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: The analysis of the primary endpoint was descriptive i.e. no statistical hypothesis test was performed.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

SAEs: Day 0 to 182; Unsolicited AEs: During the 42-day (Days 0-41) post-vaccination period; Solicited local and general symptoms: During the 7-day (Days 0-6) post-vaccination period.

Adverse event reporting additional description:

The solicited local and general symptoms were only collected for those subjects who filled in their symptom sheets. The occurrence of reported AEs (all/related) was not available and is encoded as equal to the number of subjects affected.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Arepanrix 1/2 Group
-----------------------	---------------------

Reporting group description:

Healthy male or female children aged 3 to less than (<) 10 years at the time of study vaccination, who received 1 half (1/2) pediatric dose of Arepanrix vaccine at Day 0, administered intramuscularly in the deltoid of the non-dominant arm.

Reporting group title	Pandemrix 1/2 Group
-----------------------	---------------------

Reporting group description:

Healthy male or female children aged 3 to less than (<) 10 years at the time of study vaccination, who received 1 half (1/2) pediatric dose of Pandemrix vaccine at Day 0, administered intramuscularly in the deltoid of the non-dominant arm.

Reporting group title	Arepanrix Group
-----------------------	-----------------

Reporting group description:

Healthy male or female children aged 3 to less than (<) 10 years at the time of study vaccination, who received 1 pediatric dose of Arepanrix vaccine at Day 0, administered intramuscularly in the deltoid of the non-dominant arm.

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on Total Vaccinated cohort which included all subjects with the vaccine administration documented and symptom sheet completed only on subjects that reported the specific symptom. Subjects who missed reporting symptoms (solicited/unsolicited or concomitant medications) were treated as subjects without symptoms (solicited/unsolicited or concomitant medications, respectively).

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on Total Vaccinated cohort which included all subjects with the vaccine administration documented and symptom sheet completed only on subjects that reported the specific symptom. Subjects who missed reporting symptoms (solicited/unsolicited or concomitant

medications) were treated as subjects without symptoms (solicited/unsolicited or concomitant medications, respectively).

[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on Total Vaccinated cohort which included all subjects with the vaccine administration documented and symptom sheet completed only on subjects that reported the specific symptom. Subjects who missed reporting symptoms (solicited/unsolicited or concomitant medications) were treated as subjects without symptoms (solicited/unsolicited or concomitant medications, respectively).

[4] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on Total Vaccinated cohort which included all subjects with the vaccine administration documented and symptom sheet completed only on subjects that reported the specific symptom. Subjects who missed reporting symptoms (solicited/unsolicited or concomitant medications) were treated as subjects without symptoms (solicited/unsolicited or concomitant medications, respectively).

[5] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on Total Vaccinated cohort which included all subjects with the vaccine administration documented and symptom sheet completed only on subjects that reported the specific symptom. Subjects who missed reporting symptoms (solicited/unsolicited or concomitant medications) were treated as subjects without symptoms (solicited/unsolicited or concomitant medications, respectively).

[6] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on Total Vaccinated cohort which included all subjects with the vaccine administration documented and symptom sheet completed only on subjects that reported the specific symptom. Subjects who missed reporting symptoms (solicited/unsolicited or concomitant medications) were treated as subjects without symptoms (solicited/unsolicited or concomitant medications, respectively).

[7] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on Total Vaccinated cohort which included all subjects with the vaccine administration documented and symptom sheet completed only on subjects that reported the specific symptom. Subjects who missed reporting symptoms (solicited/unsolicited or concomitant medications) were treated as subjects without symptoms (solicited/unsolicited or concomitant medications, respectively).

[8] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on Total Vaccinated cohort which included all subjects with the vaccine administration documented and symptom sheet completed only on subjects that reported the specific symptom. Subjects who missed reporting symptoms (solicited/unsolicited or concomitant medications) were treated as subjects without symptoms (solicited/unsolicited or concomitant medications, respectively).

[9] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on Total Vaccinated cohort which included all subjects with the vaccine administration documented and symptom sheet completed only on subjects that reported the specific symptom. Subjects who missed reporting symptoms (solicited/unsolicited or concomitant medications) were treated as subjects without symptoms (solicited/unsolicited or concomitant medications, respectively).

[10] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on Total Vaccinated cohort which included all subjects with the vaccine administration documented and symptom sheet completed only on subjects that reported the specific symptom. Subjects who missed reporting symptoms (solicited/unsolicited or concomitant medications) were treated as subjects without symptoms (solicited/unsolicited or concomitant medications, respectively).
