

Clinical trial results:

Immunogenicity and safety study of GSK Biologicals' combined measles-mumps-rubella vaccine in subjects seven years and older (209762).

Summary

EudraCT number	2011-003672-36
Trial protocol	SK EE
Global end of trial date	17 September 2015

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 July 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 May 2015
Global end of trial reached?	Yes
Global end of trial date	17 September 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the non-inferiority of INV_MMR vaccine to COM_MMR vaccine in terms of Geometric Mean Concentration (GMCs) for anti measles, anti mumps and anti rubella antibodies at Day 42. Criteria for the determination of non-inferiority for measles, mumps, and rubella viruses: Lower limit (LL) of the 2-sided 95% Confidence Interval (CI) on GMC ratio (INV_MMR over COM_MMR) is equal to or above 0.67 for anti-measles, anti-mumps, and anti rubella antibodies.

Protection of trial subjects:

All subjects were observed closely for at least 30 minutes following the administration of vaccines with appropriate medical treatment readily available in case of a rare anaphylactic reaction.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 July 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Estonia: 109
Country: Number of subjects enrolled	Slovakia: 216
Country: Number of subjects enrolled	United States: 671
Worldwide total number of subjects	996
EEA total number of subjects	325

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	250
Adolescents (12-17 years)	84
Adults (18-64 years)	661

From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 996 subjects were enrolled and 994 were vaccinated. Of the 994 vaccinated subjects, 83 subjects from 2 US sites were excluded due to significant GCP concerns, resulting in 911 subjects in the Total vaccinated cohort considered for the analysis.

Pre-assignment

Screening details:

The subjects were observed closely for at least 30 minutes following the administration of vaccine(s), with appropriate medical treatment readily available in case of a rare anaphylactic reaction.

Pre-assignment period milestones

Number of subjects started	996
Number of subjects completed	911

Pre-assignment subject non-completion reasons

Reason: Number of subjects	excluded due to GCP concerns: 83
Reason: Number of subjects	subjects non vaccinated: 2

Period 1

Period 1 title	Overall study period (Day 0 to Day 180) (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Blinding implementation details:

Data will be collected in an observer-blind manner. By observer-blind, it is meant that during the course of the study, the vaccine recipient and those responsible for the evaluation of any study endpoint (e.g. safety, reactogenicity, and efficacy) will all be unaware of which vaccine was administered. To do so, vaccine preparation and administration will be done by authorized medical personnel who will not participate in any of the study clinical evaluations.

Arms

Are arms mutually exclusive?	Yes
Arm title	INV_MMR Group

Arm description:

Subjects received one dose of INV_MMR (Priorix®) vaccine at Visit 1 (Day 0).

Arm type	Experimental
Investigational medicinal product name	Priorix
Investigational medicinal product code	209762
Other name	MEASLES VIRUS SCHWARZ STRAIN (LIVE, ATTENUATED); INV_MMR
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A single vaccination was given on study Day 0 in the "triceps" region of the upper arm.

Arm title	COM_MMR Group
------------------	---------------

Arm description:

Subjects received one dose of COM_MMR (M-M-R®II) vaccine from Lot 1 or Lot 2 at Visit 1 (Day 0).

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	M-M-R VAXPRO
Investigational medicinal product code	
Other name	COM_MMR
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A single vaccination was given on study Day 0 in the “triceps” region of the upper arm.

Number of subjects in period 1^[1]	INV_MMR Group	COM_MMR Group
Started	454	457
Completed	426	433
Not completed	28	24
Consent withdrawn by subject	1	1
Patient incarcerated	-	1
Lost to follow-up	26	22
Vaccinated later as new subject	1	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: A total of 996 subjects were enrolled and 994 were vaccinated. Of the 994 vaccinated subjects, 83 subjects from 2 US sites were excluded due to significant GCP concerns, resulting in 911 subjects in the Total vaccinated cohort considered for the analysis.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 November 2013	<p>The study has been changed in design based on the United States (US) Food and Drug Administration (FDA) Center for Biologics Evaluation and Research (CBER) feedback, highlighting the heterogeneous nature of the study population in terms of prior vaccination with a measles-containing vaccine and the possibility of providing 1 or 2 doses of measles, mumps and rubella vaccine (MMR) as part of this study. The study has therefore been simplified to evaluate the administration of 1 dose of MMR vaccine only. Prior receipt of at least 1 dose of MMR has been added as a study inclusion criterion. Whereas children 7-17 years of age will be excluded if they have received more than 1 dose of MMR vaccine, adults 18 years of age and older will be able to enroll with a verbal or written history of 1 or more doses of MMR vaccine. Prior MMR vaccination status will be recorded at baseline. Due to CBER's request to add a confirmatory objective for geometric mean concentration (GMC) ratio, the sample size has been increased in order to maintain statistical power.</p> <p>Since the change in study design includes only a one-dose cohort, all assessments and schedules in the study now refer to a single vaccination at Day 0, a safety follow up visit (Visit 2) at Day 42, and a phone contact at Day 180.</p> <p>In the interest of safety, definitions and categories of solicited local and general adverse events have been refined. The protocol has also been revised to include the offer of a rescue plan for subjects that fail to meet the seroresponse threshold for antibodies to measles, mumps or rubella virus components.</p> <p>Descriptive secondary statistical analyses have been added.</p>
29 September 2014	<p>The Dominican Republic will not be participating in the study as originally planned; therefore, all references to that country are deleted. Based on PAREXEL's site assessment and feasibility, the ex-United States (US) sites are willing and able to adjust their enrollment goals to include the pediatric subjects originally allocated to the Dominican Republic. Consequently, changes are made to pediatric enrollment figures for ex-US sites.</p> <p>Exclusion criterion 7 was amended to include more specific instructions regarding the administration of live influenza vaccine during the study.</p> <p>Minor administrative changes have been made to align this protocol with other protocols in the MMR program. These include changes to clarify the recording of adverse events and concomitant medication/vaccination, amending Table 14 for the recording of AEs, SAEs, and pregnancy; and clarification of the recording of rash events.</p>
08 March 2015	<p>Due to a delay in the availability of serologic data, the study team has decided to conduct one final analysis at study end, therefore eliminating the two-step analysis.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
