

## Clinical trial results:

### A Phase III Randomized, Partially Double-Blind, Active-Comparator-Controlled, Lot-to-Lot Consistency Clinical Study to Evaluate the Safety, Tolerability, and Immunogenicity of V419 in Healthy Infants When Given at 2, 4, and 6 Months Concomitantly with Prevnar 13™ and RotaTeq™ Summary

EudraCT number	2011-004108-39
Trial protocol	Outside EU/EEA
Global end of trial date	26 July 2013

#### Results information

Result version number	v1 (current)
This version publication date	03 February 2016
First version publication date	17 July 2015

#### Trial information

##### Trial identification

Sponsor protocol code	V419-006
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01340937
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Merck Sharp and Dohme Corp., A Subsidiary of Merck & Co., Inc.
Sponsor organisation address	2000 Galloping Hill Rd, Kenilworth, United States, 07033
Public contact	VP, Late Stage Development, Merck Sharp and Dohme Corp., A Subsidiary of Merck & Co., Inc., 800 672-6372, ClinicalTrialsDisclosure@merck.com
Scientific contact	VP, Late Stage Development, Merck Sharp and Dohme Corp., A Subsidiary of Merck & Co., Inc., 800 672-6372, ClinicalTrialsDisclosure@merck.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000394-PIP01-08
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 July 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	26 July 2013
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the consistency of the Postdose 3 immune response to three manufactured lots of PR5I when given at 2, 4, and 6 months of age with respect to geometric mean concentrations (GMCs) and geometric mean titers (GMTs).

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were randomized and vaccinated in the study. Vaccinations were performed by qualified and trained study personnel. Subjects with allergy to any of the vaccine components were not vaccinated. After vaccination, subjects were also kept under clinical observation for 30 minutes to ensure their safety. Appropriate medical equipment was also available on site in case of any immediate allergic reactions.

Background therapy:

Not applicable

Evidence for comparator:

Not applicable

Actual start date of recruitment	11 May 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 2808
Worldwide total number of subjects	2808
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	2808

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Study subjects were enrolled from 11 May 2011 to 26 July 2013 at 73 clinical sites in the United States.

### Pre-assignment

Screening details:

A total of 2808 subjects met all of the inclusion criteria and were enrolled and randomized. Infant vaccinations were administered at 2, 4, and 6 months and the toddler vaccinations at 15 months of age. The Interim Period is the time between the last vaccination of the infant series and the time of administration of the toddler vaccination.

### Period 1

Period 1 title	Infant Series
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Assessor

Blinding implementation details:

This was a partially double-blind study (Investigator, study personnel, subject's parent(s), and personnel of the Sponsor) were blinded to the Lot A, B, or C of V419 the subject was randomized to receive but they were not blinded to the subject's vaccination group (V419 or Control).

### Arms

Are arms mutually exclusive?	Yes
Arm title	V419 Lot A

Arm description:

V419 (Lot A) 0.5 mL intramuscular injection (IM) at 2, 4, 6 months of age; PENTACEL™ 0.5 mL IM at 15 months of age; Prevnar13™ 0.5 mL IM at 2, 4, 6, and 15 months of age; and RotaTeq™ 2 mL oral dose at 2, 4, and 6 months of age.

Arm type	Experimental
Investigational medicinal product name	PR5I
Investigational medicinal product code	V419
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular, 1 injection each at 2, 4, and 6 months of age.

Investigational medicinal product name	PENTACEL™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular, 1 injection at 15 months of age.

Investigational medicinal product name	RotaTeq™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

2 mL, oral, 1 dose each at 2, 4, and 6 months of age.

Investigational medicinal product name	Prevnar13™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use
Dosage and administration details:	
0.5 mL, intramuscular, 1 injection each at 2, 4, 6, and 15 months of age.	
<b>Arm title</b>	V419 Lot B
Arm description:	
V419 (Lot B) 0.5 mL intramuscular injection (IM) at 2, 4, 6 months of age; PENTACEL™ 0.5 mL IM at 15 months of age; Prevnar13™ 0.5 mL IM at 2, 4, 6, and 15 months of age; and RotaTeq™ 2 mL oral dose at 2, 4, and 6 months of age.	
Arm type	Experimental
Investigational medicinal product name	PR5I
Investigational medicinal product code	V419
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use
Dosage and administration details:	
0.5 mL, intramuscular, 1 injection each at 2, 4, and 6 months of age.	
Investigational medicinal product name	PENTACEL™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use
Dosage and administration details:	
0.5 mL, intramuscular, 1 injection at 15 months of age.	
Investigational medicinal product name	RotaTeq™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use
Dosage and administration details:	
2 mL, oral, 1 dose each at 2, 4, and 6 months of age.	
Investigational medicinal product name	Prevnar13™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use
Dosage and administration details:	
0.5 mL, intramuscular, 1 injection each at 2, 4, 6, and 15 months of age.	
<b>Arm title</b>	V419 Lot C
Arm description:	
V419 (Lot C) 0.5 mL intramuscular injection (IM) at 2, 4, 6 months of age; PENTACEL™ 0.5 mL IM at 15 months of age; Prevnar13™ 0.5 mL IM at 2, 4, 6, and 15 months of age; and RotaTeq™ 2 mL oral dose at 2, 4, and 6 months of age.	
Arm type	Experimental
Investigational medicinal product name	PR5I
Investigational medicinal product code	V419
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:	
0.5 mL, intramuscular, 1 injection each at 2, 4, and 6 months of age.

Routes of administration	Intramuscular use
Dosage and administration details:	
0.5 mL, intramuscular, 1 injection at 15 months of age.	
<b>Arm title</b>	Control

Arm description:

PENTACEL™ 0.5 mL IM at 2, 4, 6, and 15 months of age; Prevnar13™ 0.5 mL IM at 2, 4, 6, and 15 months of age; RotaTeq™ 2 mL oral dose at 2, 4, and 6 months of age; and RECOMBIVAX HB™ 0.5 mL IM at 2 and 6 months of age.

Arm type	Active comparator
Investigational medicinal product name	PENTACEL™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular, 1 injection each at 2, 4, 6, and 15 months of age.

Investigational medicinal product name	RECOMBIVAX HB™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular, 1 injection each at 2 and 6 months of age.

Investigational medicinal product name	Prevnar13™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular, 1 injection each at 2, 4, 6, and 15 months of age.

Investigational medicinal product name	RotaTeq™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

2 mL, oral, 1 dose each at 2, 4, and 6 months of age.

## Statistical analyses

<b>Statistical analysis title</b>	Lot A/Lot B Ratio
Statistical analysis description: Lot consistency analysis regarding GMC of Lot A/Lot B ratio.	
Comparison groups	V419 Lot A v V419 Lot B
Number of subjects included in analysis	1200
Analysis specification	Pre-specified
Analysis type	equivalence <sup>[1]</sup>
Method	ANCOVA
Parameter estimate	GMC ratio (Lot A/Lot B)
Point estimate	0.91
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.77
upper limit	1.08

Notes:

[1] - The estimates for GMC ratio are based on an ANCOVA model with natural log-transformed postvaccination titer as the response variable, and vaccination group, natural log-transformed, prevaccination titer, actual brand of birth dose Hepatitis B vaccine as explanatory variables. Equivalence required that the lower and upper limits of the 95% confidence interval of the GMC ratios between any 2 lots were within the equivalence margin (0.67 to 1.5).

<b>Statistical analysis title</b>	Lot A/Lot C Ratio

Comparison groups	V419 Lot B v V419 Lot C
Number of subjects included in analysis	1221
Analysis specification	Pre-specified
Analysis type	equivalence <sup>[13]</sup>
Method	ANCOVA
Parameter estimate	GMC ratio (Lot B/Lot C)
Point estimate	1.05

Confidence interval	
level	95 %
sides	2-sided
lower limit	0.98
upper limit	1.13

Notes:

[13] - The estimates for GMC ratio are based on an ANCOVA model with natural log-transformed postvaccination titer as the response variable, and vaccination group, natural log-transformed, prevaccination titer, actual brand of birth dose Hepatitis B vaccine as explanatory variables. Equivalence required that the lower and upper limits of the 95% confidence interval of the GMC ratios between any 2 lots were within the equivalence margin (0.67 to 1.5).

### Primary: Geometric Mean Concentrations (GMC) for Antibodies to Pertussis Toxin

End point title	Geometric Mean Concentrations (GMC) for Antibodies to Pertussis Toxin

## Statistical analyses

Statistical analysis title	Lot A-Lot B Difference
----------------------------	------------------------

Statistical analysis description:

Response rate analysis of Lot A-Lot B mean difference.

Comparison groups	V419 Lot A v V419 Lot B
-------------------	-------------------------

Number of subjects included in analysis	1181
Analysis specification	Pre-specified
Analysis type	equivalence <sup>[57]</sup>
Method	Miettinen and Nurminen
Parameter estimate	Mean difference (final values)
Point estimate	1.73
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.37
upper limit	3.4

Notes:

[57] - Response rate differences were stratified by actual brand of birth dose Hepatitis B vaccine as explanatory variables. Equivalence required that the lower and upper limits of the 95% confidence interval of the response rates between any 2 lots were within the equivalence margin (-10% to 10%).

<b>Statistical analysis title</b>	Lot A-Lot C Difference
-----------------------------------	------------------------

Statistical analysis description:

Response rate analysis of Lot A-Lot C mean difference.

Comparison groups	V419 Lot A v V419 Lot C
Number of subjects included in analysis	1176
Analysis specification	Pre-specified
Analysis type	equivalence <sup>[58]</sup>
Method	Miettinen and Nurminen
Parameter estimate	Mean difference (final values)
Point estimate	0.36
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.77
upper limit	1.63

Notes:

[58] - Response rate differences were stratified by actual brand of birth dose Hepatitis B vaccine as explanatory variables. Equivalence required that the lower and upper limits of the 95% confidence interval of the response rates between any 2 lots were within the equivalence margin (-10% to 10%).

<b>Statistical analysis title</b>	Lot B-Lot C Difference
-----------------------------------	------------------------

Statistical analysis description:

Response rate analysis of Lot B-Lot C mean difference.

Comparison groups	V419 Lot B v V419 Lot C
Number of subjects included in analysis	1165
Analysis specification	Pre-specified
Analysis type	equivalence <sup>[59]</sup>
Method	Miettinen and Nurminen
Parameter estimate	Mean difference (final values)
Point estimate	-1.36
Confidence interval	
level	95 %
sides	2-sided
lower limit	-3.03
upper limit	0.15

Notes:

[59] - Response rate differences were stratified by actual brand of birth dose Hepatitis B vaccine as explanatory variables. Equivalence required that the lower and upper limits of the 95% confidence interval of the response rates between any 2 lots were within the equivalence margin (-10% to 10%).

<b>Statistical analysis title</b>	Combined Lots A, B, C-Control Difference
Statistical analysis description: Response rate analysis of Combined Lots A, B, and C-Control mean difference.	
Comparison groups	Control v Combined Lot A, B, and C
Number of subjects included in analysis	2050
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[60]</sup>
P-value	< 0.001
Method	Miettinen and Nurminen
Parameter estimate	Mean difference (final values)
Point estimate	0.72
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.59
upper limit	3.14

Notes:

[60] - Response rate, response rate differences, and p-values were stratified by actual brand of birth dose Hepatitis B vaccine as explanatory variables. Non-inferiority required that the lower limit of the 95% confidence interval of the response rates between any 2 lots was  $\geq$ -10%.

## Secondary: Percentage of Subjects Responding to Pertussis Filamentous Hemagglutinin (FHA)

End point title	Percentage of Subjects Responding to Pertussis Filamentous Hemagglutinin (FHA)
End point description: Subject serum samples were collected for testing with an ELISA for antibodies to pertussis filamentous hemagglutinin. Sera response or endpoint was defined as follows: (1) if the pre dose titer was <4X LLOQ then the post dose titer was $\geq$ 4X LLOQ; (2) if the predose titer was $\geq$ 4X LLOQ then the post dose titer was $\geq$ the predose titer. The analysis population included subjects who met the inclusion criteria, were not protocol violators, had an infant vaccination window of 42 to 84 days after the previous dose, and a blood draw sample window for the endpoint of 28 to 51 days after dose 3.	
End point type	Secondary
End point timeframe: Postdose 3 (Month 7)	

<b>End point values</b>	V419 Lot A	V419 Lot B	V419 Lot C	Control

Analysis type	non-inferiority <sup>[80]</sup>
P-value	< 0.001
Method	Miettinen and Nurminen
Parameter estimate	Mean difference (final values)
Point estimate	0
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.2
upper limit	1.24

Notes:

[80] - Response rate, response rate differences, and p-values were stratified by actual brand of birth dose Hepatitis B vaccine as explanatory variables. Non-inferiority required that the lower limit of the 95% confidence interval of the response rates between any 2 lots was  $\geq -5\%$ .

## Secondary: Percentage of Subjects Responding to Poliovirus Type 3

End point title	Percentage of Subjects Responding to Poliovirus Type 3
-----------------	--

End point description:

Subject serum samples were collected for testing with a microneutralization inhibition test for neutralizing antibodies to Poliovirus Type 3. Sera response or endpoint is defined as a titer  $\geq 8$ . The analysis population included subjects who met the inclusion criteria, were not protocol violators, had an infant vaccination window of 42 to 84 days after the previous dose, and a blood draw sample window for the endpoint of 28 to 51 days after dose 3.

End point type	Secondary
----------------	-----------

End point timeframe:

Postdose 3 (Month 7)

End point values	V419 Lot A	V419 Lot B	V419 Lot C	Control
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group
Number of subjects analysed	624	625	625	304

GMC ratio (Combined Lots A, B, C/Control)	
Comparison groups	Control v Combined Lot A, B, and C
Number of subjects included in analysis	1447
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[96]</sup>
P-value	< 0.001
Method	ANCOVA
Parameter estimate	GMC Ratio
Point estimate	0.93
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.8
upper limit	1.07

Notes:

[96] - The estimates for GMC, GMC ratio, and p-values are based on an ANCOVA model with natural log-transformed postvaccination titer as the response variable, and vaccination group, natural log-transformed, prevaccination titer, actual brand of birth dose Hepatitis B vaccine as explanatory variables. Non-inferiority required that the lower limit of the 95% confidence interval of the GMC ratio is  $\geq 0.67$ .

## **Secondary: Percentage of Subjects Reporting Solicited Injection-site and Systemic Reactions Within Five Days Following Any Infant Dose Vaccination in the V419 and Control Groups**

End point title	Percentage of Subjects Reporting Solicited Injection-site and Systemic Reactions Within Five Days Following Any Infant Dose Vaccination in the V419 and Control Groups <sup>[106]</sup>
-----------------	---

End point description:

Solicited injection site reactions: Pain, Erythema, and Swelling. Solicited systemic reactions: Fever, Vomiting, Crying abnormal, Drowsiness, Appetite lost, and Irritability. Grade 3 Solicited injection site reaction: Pain, Cries when injected limb is moved or the movement of the injected limb is reduced; Erythema and Swelling, >5 cm. Grade 3 Solicited systemic reactions: Fever (Pyrexia),  $\geq 39.5^{\circ}\text{C}$  rectal; Vomiting,  $\geq 6$  episodes per 24 hours or requiring parenteral hydration; Crying abnormal, >3 hours; Drowsiness (Somnolence), Sleeping most of the time or difficult to wake up; Appetite lost, Refuses  $\geq 3$  feeds or refuses most feeds; Irritability, Inconsolable.

End point type	Secondary
----------------	-----------

End point timeframe:

Day 0 up to Day 5 post-any infant dose vaccination

Notes:

[106] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: A descriptive analysis was performed for this outcome.

End point values	Control	Combined Lot A, B, and C		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	397	2390		
Units: Percentage of subjects				
number (not applicable)				
Any Injection site Erythema	40.8	44.6		
Severe Injection site Erythema	0.8	0.3		
Any Injection site Pain	72	70		
Severe Injection site Pain	5.5	6		
Any Injection site Swelling	34.5	34.5		
Severe Injection site Swelling	0.5	0.5		
Any Crying abnormal	72.5	74.8		
Severe Crying abnormal	12.6	9.5		
Any Decreased appetite	47.4	48.5		
Severe Decreased appetite	1.3	1.4		
Any Irritability	79.8	80.7		
Severe Irritability	6.5	7.8		
Any Pyrexia	33.2	47.1		
Severe Pyrexia	1.3	1.4		
Any Somnolence	73.3	73.2		
Severe Somnolence	3	3.5		
Any Vomiting	24.9	26.7		
Severe Vomiting	1.5	0.8		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Percentage of Subjects With Elevated Temperature By Severity Within Five Days Following Any Infant Dose Vaccination in the V419 and Control Groups

End point title	Percentage of Subjects With Elevated Temperature By Severity Within Five Days Following Any Infant Dose Vaccination in the V419 and Control Groups
-----------------	--

End point description:

Maximum temperature (all routes) was based on actual temperatures recorded with no adjustments to the measurement route. Maximum temperature (rectal) was required of all subjects if the reading by another method was  $\geq 38.0^{\circ}\text{C}$ . Percentages were based on the number of subjects in the population with safety follow-up and temperature data.

End point type	Secondary
----------------	-----------

End point timeframe:

Day 0 up to Day 5 post-any Infant dose

<b>End point values</b>	Combined Lot A, B, and C	Control		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	2308	378

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

SAEs: up to 6 months after vaccination 3 (the last infant vaccination) and up to 15 days after vaccination 4 (the toddler vaccination); Vaccine-related SAEs and deaths: up to Month 16 (duration of study); Other AEs: up to 15 days after any vaccination

Adverse event reporting additional description:

The All Subjects as Treated population included all randomized subjects who received at least one dose of study vaccine and had safety follow up. For safety analysis, subjects who received the 3 V419 lots were combined.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
Dictionary version	16.1

### Reporting groups

Reporting group title	V419 (Combined Lots A, B, and C)
-----------------------	----------------------------------

Reporting group description:

V419 (Combined Lots A, B, and C) 0.5 mL intramuscular injection (IM) at 2, 4, 6 months of age; Pentacel™ 0.5 mL IM at 15 months of age; Prevnar13™ 0.5 mL IM at 2, 4, 6, and 15 months of age; and RotaTeq™ 2 mL oral dose at 2, 4, and 6 months of age.

Reporting group title	Control
-----------------------	---------

Reporting group description:

Pentacel™ 0.5 mL IM at 2, 4, 6, and 15 months of age; Prevnar13™ 0.5 mL IM at 2, 4, 6, and 15 months of age; RotaTeq™ 2 mL oral dose at 2, 4, and 6 months of age; and Modified Process Hepatitis B vaccine 0.5 mL IM at 2 and 6 months of age.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 March 2011	Evaluation of lot consistency was revised to be based on GMTs, rather than response rates, at 1 month after the third dose of PR5I/Control, analysis of lot consistency based on response rates was moved from a conditional primary hypothesis to Secondary Hypothesis #1, a non-inferiority analysis of PR5I to Control was added as Secondary Hypothesis #3, statistical criterion for the evaluation of the immunogenicity of Prevnar13™ was revised, objectives and hypotheses were renumbered accordingly, sponsor name was updated to Merck Sharp & Dohme Corp., a subsidiary of Merck & Co., Inc., all references to Interactive Voice Response System was updated to Interactive Response Technology, and the reference list was reorganized to present references sequentially.
24 January 2013	Added a new primary statistical analysis method for all GMT analyses to account for missing baseline titers due to limited serum volumes obtained from 2-month old infant subjects at study entry, added a second Per Protocol population (referred to as Per Protocol-Revised Window) in addition to the existing Per Protocol population (Per Protocol-Original Window) to account for subjects who received study vaccinations and/or blood draws outside of narrow protocol-defined visit windows, and added 2 sensitivity analyses: (1) analysis of GMT endpoints with no baseline adjustment and (2) analysis of GMT endpoints based on data from subjects with both baseline and post vaccination titers to support the ANCOVA with multiple imputation for missing baseline titers primary analysis for GMT endpoints.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
