Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 August 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	31 August 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objectives of the Phase Ib portion of the study were as follows: To evaluate the safety and tolerability of ipatasertib (GDC-0068), an Akt inhibitor, administered in combination with abiraterone and of apitolisib (GDC-0980), a phosphatidylinositol 3 kinase [PI3K], and/or mammalian target of rapamycin [mTOR] inhibitor, administered in combination with abiraterone. To identify dose-limiting toxicities, estimate the maximum tolerated dose, and identify a recommended Phase II dose of ipatasertib administered in combination with abiraterone and of apitolisib administered in combination with abiraterone. The primary objective of the Phase II portion of the study was to estimate the efficacy as measured by radiographic progression-free survival of ipatasertib (dosed at either 400 milligrams [mg] or 200 mg daily) + abiraterone and prednisone/prednisolone versus placebo + abiraterone and prednisone/prednisolone.

Protection of trial subjects:

All study participants were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 January 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 11
Country: Number of subjects enrolled	Spain: 46
Country: Number of subjects enrolled	United Kingdom: 24
Country: Number of subjects enrolled	Czechia: 22
Country: Number of subjects enrolled	France: 34
Country: Number of subjects enrolled	Greece: 16
Country: Number of subjects enrolled	Italy: 49
Country: Number of subjects enrolled	Romania: 42
Country: Number of subjects enrolled	United States: 54
Worldwide total number of subjects	298
EEA total number of subjects	220

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	90
From 65 to 84 years	201
85 years and over	7

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 55 centers in 10 countries.

Pre-assignment

Screening details:

The study consisted of 3 stages: Phase Ib determined recommended Phase II doses (RP2D) for ipatasertib and apitolisib in combination with abiraterone and prednisone/prednisolone. Phase II compared ipatasertib (400 mg/200 mg daily) versus placebo each combined with abiraterone and prednisone/prednisolone. The third stage included the safety cohort.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

Blinding implementation details:

The Phase Ib portion of the study was open-label. In Phase II, participants and investigators were blinded with regard to treatment status (i.e., ipatasertib vs. placebo). The Safety cohort was open-label.

Arms

Are arms mutually exclusive?	Yes
Arm title	Phase Ib: Ipatasertib 400 mg

Arm description:

Participants received ipatasertib 400 mg orally once daily, abiraterone 1000 mg orally once daily, and prednisone/prednisolone 5 mg twice daily (bid) orally continuously in 28-day treatment cycles until disease progression or intolerable toxicity.

Arm type	Experimental
Investigational medicinal product name	Ipatasertib
Investigational medicinal product code	
Other name	GDC-0068
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Ipatasertib was administered orally once daily beginning on Day 1 of Cycle 1 until disease progression or intolerable toxicity.

Investigational medicinal product name	Prednisone/Prednisolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Prednisone/prednisolone was to be taken per local clinical practice/investigator recommendation.

Investigational medicinal product name	Abiraterone acetate
Investigational medicinal product code	
Other name	Zytiga®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Abiraterone was administered once a day, at the same time that ipatasertib was taken.

Arm title	Phase Ib: Apitolisib 30 mg
------------------	----------------------------

Arm description:

Participants received apitolisib 30 mg orally once daily, abiraterone 1000 mg orally once daily, and prednisone/prednisolone 5 mg bid orally continuously in 28-day treatment cycles until disease progression or intolerable toxicity.

Arm type	Experimental
Investigational medicinal product name	Apitolisib
Investigational medicinal product code	
Other name	GDC-0980
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Apitolisib was administered daily beginning on Day 1 of Cycle 1 until disease progression or intolerable toxicity.

Investigational medicinal product name	Prednisone/Prednisolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Prednisone/prednisolone was to be taken per local clinical practice/investigator recommendation.

Investigational medicinal product name	Abiraterone acetate
Investigational medicinal product code	
Other name	Zytiga®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Abiraterone was administered once a day, at the same time that ipatasertib was taken.

Arm title	Phase II: Ipatasertib 400 mg + Abiraterone
------------------	--

Arm description:

Participants received ipatasertib 400 mg orally once daily, abiraterone 1000 mg orally once daily, and prednisone/prednisolone 5 mg bid orally continuously in 28-day treatment cycles until disease progression or intolerable toxicity.

Arm type	Experimental
Investigational medicinal product name	Ipatasertib
Investigational medicinal product code	
Other name	GDC-0068
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Ipatasertib was administered orally once daily beginning on Day 1 of Cycle 1 until disease progression or intolerable toxicity.

Investigational medicinal product name	Prednisone/Prednisolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Prednisone/prednisolone was to be taken per local clinical practice/investigator recommendation.

Investigational medicinal product name	Abiraterone acetate
Investigational medicinal product code	
Other name	Zytiga®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Abiraterone was administered once a day, at the same time that ipatasertib was taken.

Arm title	Phase II: Ipatasertib 200 mg + Abiraterone
------------------	--

Arm description:

Participants received ipatasertib 200 mg orally once daily, abiraterone 1000 mg once orally daily, and prednisone/prednisolone 5 mg bid orally continuously in 28-day treatment cycles until disease progression or intolerable toxicity.

Arm type	Experimental
Investigational medicinal product name	Ipatasertib
Investigational medicinal product code	
Other name	GDC-0068
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Ipatasertib was administered orally once daily beginning on Day 1 of Cycle 1 until disease progression or intolerable toxicity.

Investigational medicinal product name	Prednisone/Prednisolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Prednisone/prednisolone was to be taken per local clinical practice/investigator recommendation.

Investigational medicinal product name	Abiraterone acetate
Investigational medicinal product code	
Other name	Zytiga®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Abiraterone was administered once a day, at the same time that ipatasertib was taken.

Arm title	Phase II: Placebo + Abiraterone
------------------	---------------------------------

Arm description:

Participants received placebo (matched to ipatasertib 400 mg or 200) orally once daily, abiraterone 1000 mg orally once daily, and prednisone/prednisolone 5 mg bid orally continuously in 28-day treatment cycles until disease progression or intolerable toxicity.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Placebo (for Ipatasertib 400 mg or 200 mg) was administered daily beginning on Day 1 of Cycle 1 until disease progression or intolerable toxicity.

Investigational medicinal product name	Prednisone/Prednisolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:	
Prednisone/prednisolone was to be taken per local clinical practice/investigator recommendation.	
Investigational medicinal product name	Abiraterone acetate
Investigational medicinal product code	
Other name	Zytiga®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Abiraterone was administered once a day, at the same time that ipatasertib was taken.

Arm title	Safety Cohort: Ipatasertib 400 mg + Abiraterone
------------------	---

Arm description:

Participants received ipatasertib 400 mg orally once daily and/or prednisone/prednisolone 5 mg orally once daily or bid and/or abiraterone 1000 mg orally once daily according to the following schedule: ipatasertib in the morning during Cycle 1, Days 1-7; ipatasertib in the morning plus prednisone/prednisolone once at night during Cycle 1, Day 8; ipatasertib in the morning plus prednisone/prednisolone bid (morning and night) during Cycle 1, Days 9-11; ipatasertib in the morning plus prednisone/prednisolone bid (morning and night) and abiraterone in the morning during Cycle 1, Days 12-18; ipatasertib in the evening plus prednisone/prednisolone bid (morning and night) and abiraterone at the same time as ipatasertib during Cycle 1, Days 19-25; Cycle 2 and beyond ipatasertib once daily in the morning or evening, abiraterone at the same time as ipatasertib, and prednisone/prednisolone bid.

Arm type	Experimental
Investigational medicinal product name	Ipatasertib
Investigational medicinal product code	
Other name	GDC-0068
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Ipatasertib was administered orally once daily beginning on Day 1 of Cycle 1 until disease progression or intolerable toxicity.

Investigational medicinal product name	Abiraterone acetate
Investigational medicinal product code	
Other name	Zytiga®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Abiraterone was administered once a day, at the same time that ipatasertib was taken starting at Cycle 1, Day 18 and then continuously until disease progression or intolerable toxicity.

Investigational medicinal product name	Prednisone/Prednisolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Prednisone/prednisolone was to be taken per local clinical practice/investigator recommendation starting on Cycle 1, Day 8.

Subject analysis set title	Safety Set Ipatasertib 400 mg + Abiraterone
Subject analysis set type	Safety analysis
Subject analysis set description: The Safety Set for Ipatasertib 400 mg + Abiraterone included all treated participants.	
Subject analysis set title	Safety Set Ipatasertib 200 mg + Abiraterone
Subject analysis set type	Safety analysis
Subject analysis set description: There were 2 participants who had been randomized to the Placebo + Abiraterone arm, but received 200 mg ipatasertib for 5 days, and are thus counted in the Ipatasertib 200 mg + Abiraterone for the safety population.	
Subject analysis set title	Safety Set Placebo + Abiraterone
Subject analysis set type	Safety analysis
Subject analysis set description: There were 2 participants who had been randomized to the Placebo + Abiraterone arm, but received 200 mg ipatasertib for 5 days, and are thus counted in the Ipatasertib 200 mg + Abiraterone for the safety population.	

Primary: Phase Ib: Percentage of Participants With Dose-Limiting Toxicity (DLTs)

End point title	Phase Ib: Percentage of Participants With Dose-Limiting Toxicity (DLTs) ^{[1][2]}
-----------------	---

End point description:

DLT: 1 of the following toxicities, at least possibly related to ipatasertib or apitolisib. 1) Grade \geq 3 non-hematologic, non-hepatic major organ AE; 2) Grade \geq 3 febrile neutropenia; 3) Grade \geq 4 neutropenia (absolute neutrophils less than [$<$] 500 per microliter) lasting greater than ($>$) 7 days; 4) Grade \geq 3 thrombocytopenia associated with acute hemorrhage; 5) Grade \geq 4 thrombocytopenia; 6) Grade \geq 4 anemia; 7) 1 episode of fasting Grade \geq 4 hyperglycemia or 3 episodes of fasting Grade 3 hyperglycemia on separate days within 7 days, as determined by laboratory blood glucose evaluation; 8) Grade \geq 3 elevation lasting for $>$ 48 hours for hepatic transaminase or liver-specific alkaline phosphatase or total bilirubin. Adverse events were graded according to the National Cancer Institute Common Terminology Criteria for Adverse Events v 4.0. Safety population: all participants who had received ipatasertib, apitolisib, placebo, or abiraterone treatment on Day 1 of Cycle 1.

End point type	Primary
----------------	---------

End point timeframe:

Days 1 to 28 of Cycle 1 (Cycle length = 28 days)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive analyses were planned to be reported.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only Phase Ib arms were planned to be included in the analysis.

Statistical analyses

No statistical analyses for this end point

Primary: Phase II: Radiographic Progression Free Survival (rPFS) - ITT Population

End point title	Phase II: Radiographic Progression Free Survival (rPFS) - ITT Population ^[8]
-----------------	---

End point description:

rPFS: Time from randomization to the first occurrence of disease progression, as determined by investigator review of tumor assessments via CT scan and bone scans, or death on study from any cause, whichever occurred first. Progression was defined as follows: Soft tissue mass (Response Evaluation Criteria in Solid Tumors [RECIST] 1.1): at least 20% increase in sum of diameters of target lesions compared to smallest sum of diameters on-study and absolute increase of at least 5 mm, progression of existing non-target lesions, or presence of new lesions. Bone: ≥ 2 new bone lesions plus 2 additional at confirmation on a second bone scan ≥ 4 weeks later (< 12 weeks after randomization). ≥ 2 new bone lesions consistent with progression, without need for confirmatory bone scan (≥ 12 weeks after randomization). ITT Population was defined as all randomised participants with the participants allocated to the treatment arm according to the randomisation.

End point type	Primary
----------------	---------

End point timeframe:

Screening up to radiographic progression or death, whichever occurred first (assessed at screening, after Cycles 3, 5, 7, 9, every three cycles [12 weeks] thereafter up to end of treatment [up to 3.6 years overall]) (cycle length = 28 days)

Notes:

[8] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only Phase II arms were planned to be included in the analysis.

Primary: Phase II: rPFS in Participants With Institute of Cancer Research (ICR) Phosphatase and Tensin Homolog (PTEN) Loss

End point title	Phase II: rPFS in Participants With Institute of Cancer Research (ICR) Phosphatase and Tensin Homolog (PTEN) Loss ^[9]
-----------------	--

End point description:

rPFS: Time from randomization to the first occurrence of disease progression, as determined by investigator review of tumor assessments via CT scan and bone scans, or death on study from any cause, whichever occurred first. Progression was defined as follows: Soft tissue mass (RECIST 1.1): at least 20% increase in sum of diameters of target lesions compared to smallest sum of diameters on-study and absolute increase of at least 5 mm, progression of existing non-target lesions, or presence of new lesions. Bone: ≥ 2 new bone lesions plus 2 additional at confirmation on 2nd bone scan ≥ 4 weeks later (< 12 weeks after randomization). ≥ 2 new bone lesions consistent with progression, without need for confirmatory bone scan (≥ 12 weeks after randomization). PTEN status was assessed by RUO IHC assay that was performed at ICR, UK. Samples with 100% of the tumor with no PTEN staining were classified as "ICR PTEN loss". Number of participants analyzed=participants with PTEN loss.

End point type	Primary
----------------	---------

End point timeframe:

Screening up to radiographic progression or death, whichever occurred first (assessed at screening, after Cycles 3, 5, 7, 9, every three cycles [12 weeks] thereafter up to end of treatment [up to 3.6 years overall]) (cycle length = 28 days)

Notes:

[9] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Only Phase II arms were planned to be included in the analysis.

Secondary: Phase II: Duration of Tumor Response - ITT Population

End point title	Phase II: Duration of Tumor Response - ITT Population ^[37]
-----------------	---

End point description:

Duration of tumor response: time period from 1st documentation of objective response (CR/PR) (whichever status was recorded first) to date of 1st occurrence of investigator documented disease progression or death. CR: disappearance of all target and non-target lesions and no new lesions, all pathological lymph nodes must have decreased to <10 mm in short axis. PR: at least 30% decrease in sum of diameters of target lesions (taking as reference baseline sum diameters), no progression in non-target lesions, and no new lesions. Progression: increase by at least 20% in sum of longest diameters of each target lesion, taking as reference smallest sum of longest diameters or appearance of one or more new lesions. Duration of tumor response was estimated using Kaplan Meier method. Number of participants analysed=participants from ITT population who had achieved an objective response. Here, 99999 reflects that data was not evaluable due to insufficient number of events.

Time to pain progression was defined as the time from screening till first occurrence of pain progression. Pain progression: ≥ 2 point-increase from baseline on the modified Brief Pain Inventory – short form (mBPI-sf). The mBPI-sf consists of 4 questions that assess pain intensity (worst, least, average, right now) and seven items within one question that assess the impact of pain on daily functions (general activity, mood, walking ability, normal work, relations with other people, sleep, enjoyment of life). Each item was assessed on 0-10 scale with 0 being no pain to 10 being worst imaginable pain. Total score was the average of individual item (range 0-10). PTEN status was assessed by RUO IHC assay that was performed at ICR, UK. Samples with 100% of the tumor with no PTEN staining were classified as "ICR PTEN loss". Number of participants analyzed=participants with PTEN loss. Here, "99999" reflects that the data was not evaluable because of insufficient number of events.

End point type	Secondary
----------------	-----------

End point timeframe:

Screening, Day 1 of each cycle (cycle length=28 days) up to treatment completion (up to 3.6 years)

Notes:

[46] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only Phase II arms were planned to be included in the analysis.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up until 30 days following the last administration of study treatment or until initiation of another anti-cancer therapy, whichever occurred first (up to approximately 10.7 years)

Adverse event reporting additional description:

The Safety Population was defined as all participants who had received ipatasertib, apitolisib, placebo, or abiraterone treatment.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Phase Ib: Ipatasertib 400 mg
-----------------------	------------------------------

Reporting group description:

Participants received ipatasertib 400 mg orally daily, abiraterone 1000 mg orally daily, and prednisone/prednisolone 5 mg bid orally continuously in 28-day treatment cycles until disease progression or intolerable toxicity.

Reporting group title	Phase Ib: Apitolisib 30 mg
-----------------------	----------------------------

Reporting group description:

Participants received apitolisib 30 mg orally daily, abiraterone 1000 mg orally daily, and prednisone/prednisolone 5 mg bid orally continuously in 28-day treatment cycles until disease progression or intolerable toxicity.

Reporting group title	Phase II: Ipatasertib 400 mg + Abiraterone
-----------------------	--

Reporting group description:

Participants received ipatasertib 400 mg orally daily, abiraterone 1000 mg orally daily, and prednisone/prednisolone 5 mg bid orally continuously in 28-day treatment cycles until disease progression or intolerable toxicity.

Reporting group title	Phase II: Ipatasertib 200 mg + Abiraterone
-----------------------	--

Reporting group description:

Participants received ipatasertib 200 mg orally daily, abiraterone 1000 mg orally daily, and prednisone/prednisolone 5 mg bid orally continuously in 28-day treatment cycles until disease progression or intolerable toxicity.

Reporting group title	Phase II: Placebo + Abiraterone
-----------------------	---------------------------------

Reporting group description:

Participants received placebo (for ipatasertib 400 mg or 200) orally daily, abiraterone 1000 mg orally daily, and prednisone/prednisolone 5 mg bid orally continuously in 28-day treatment cycles until disease progression or intolerable toxicity.

Reporting group title	Safety Cohort: Ipatasertib 400 mg + Abiraterone
-----------------------	---

Reporting group description:

Participants received ipatasertib 400 mg orally once daily and/or prednisone/prednisolone 5 mg orally once daily or bid and/or abiraterone 1000 mg orally once daily according to the following schedule: ipatasertib in the morning during Cycle 1, Days 1-7; ipatasertib in the morning plus prednisone/prednisolone once at night during Cycle 1, Day 8; ipatasertib in the morning plus prednisone/prednisolone bid (morning and night) during Cycle 1, Days 9-11; ipatasertib in the morning plus prednisone/prednisolone bid (morning and night) and abiraterone in the morning during Cycle 1, Days 12-18; ipatasertib in the evening plus prednisone/prednisolone bid (morning and night) and abiraterone at the same time as ipatasertib during Cycle 1, Days 19-25; Cycle 2 and beyond ipatasertib once daily in the morning or evening, abiraterone at the same time as ipatasertib, and prednisone/prednisolone bid.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 January 2012	The following major changes were made in Amendment: 1) For Phase Ib, the exclusion criteria were changed: Participants who had received selected prior anti-cancer therapies (cytochrome P 17 inhibitors including abiraterone, inhibitors of Akt, PI3K/mTOR) were allowed. 2) For Phase Ib and II, participants who had received previous therapies with ketoconazole and/or MDV3100 (i.e., enzalutamide) were allowed to enroll. 3) The definition of DLT with respect to liver parameters was modified. 4) The number of sites participating in this study was increased from approximately 50 to approximately 70 sites. 5) Prednisolone was added as an alternative to prednisone. 6) Denosumab was added to the list of allowed concomitant therapies.
29 April 2012	The amendment was released to clarify the process for unblinding of treatment assignment by the investigator through the interactive voice response system/interactive web response system.
11 September 2012	The amendment was released to introduce the following main changes: 1) The study was amended to indicate the recommended dose of ipatasertib (GDC-0068, 400 mg daily) in combination with abiraterone for the Phase II part of the study, on the basis of safety and pharmacokinetic data from the Phase Ib portion. In addition, because of adverse events observed with the combination apitolisib (GDC-0980, 30 mg daily) and abiraterone, further exploration of this combination in the study was discontinued. 2) The design of the Phase II portion of the study was amended accordingly. 3) Updated dose-modification guidelines for the management of hyperglycemia, skin toxicity, gastrointestinal toxicities, and pneumonitis were included.
06 March 2013	The following major changes were made in Amendment: 1) Eligibility criteria were modified to exclude patients with poor performance status (Eastern Cooperative Oncology Group [ECOG] 2). 2) Accordingly, the stratification factors in the Phase II portion of the study were changed: randomization was stratified by prior enzalutamide (yes vs. no), progression factor (PSA only vs. other), and number of prior chemotherapy regimens for metastatic disease (one vs. more than one). 3) Dose modification for prednisone was added. 4) Risk of abiraterone on the fetus was added. 5) Dose reduction of ipatasertib/placebo or apitolisib was added as an option for management of fasting Grade ≥ 3 hyperglycemia if fasting glucose levels recovered to Grade less than or equal to 2 within 3 days upon dose interruption. 6) Cases of potential drug-induced liver injury that included an elevated alanine aminotransferase or aspartate aminotransferase in combination with either an elevated bilirubin or clinical jaundice, and suspected transmission of an infectious agent by the study drug were added as protocol defined events of special interest.
27 November 2013	The disease inclusion criterion was updated to align with the study title and rationale that participants who progressed from docetaxel-based chemotherapy (including docetaxel and cabazitaxel, sharing the same cytotoxic mechanism) should be eligible.
15 September 2017	The amendment was released with the following updates: 1) Facilitate study closure of the Phase Ib portion of the study, while allowing current participants in the Phase II portion of the study to stay on treatment. 2) A section on the Management of Selected Identified and Potential Risks of Ipatasertib was added. 3) Laboratory assessments were streamlined and reduced for ongoing participants. 4) The survival follow-up assessments were removed. 5) The use of the following treatments was removed from the list of prohibited therapies: for apitolisib, proton pump inhibitors (it was recommended that these agents be replaced with an H2-receptor antagonist when feasible), and orally administered H2-receptor antagonists within 10 hours before and 2 hours after apitolisib dose.

24 April 2019	The amendment was released with the following updates: 1) Include a new safety cohort to the study. The purpose of the safety cohort was to use new technology, a continuous glucose monitoring device, to assess the impact of ipatasertib monotherapy, ipatasertib plus prednisone/prednisolone, and ipatasertib plus prednisone/prednisolone plus abiraterone on glucose levels. 2) Compare morning versus evening dosing of ipatasertib with regard to its impact on glucose levels. 3) Explore the potential drug-drug interaction between abiraterone and ipatasertib and/or its metabolite, G-037720.
02 June 2020	The amendment was released with the following updates: 1) Harmonize the inclusion criteria of fasting total serum glucose and HbA1c between the Safety cohort and the Phase II portion of the study. 2) Implement additional changes concerning safety reporting and management of risks as well as further definition of the retinal disorder central subfield thickness.
02 June 2021	The amendment was released to clarify the access to ipatasertib for participants assigned to this treatment after completion of the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
