Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 September 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 August 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety, tolerability, pharmacokinetics (PK) and antiviral activity of RO5190591/ritonavir (danoprevir/r) in combination with peginterferon and ribavirin in treatment-naïve genotype 1 or 4 chronic hepatitis C patients with compensated cirrhosis and danoprevir/r + RO5024048 in combination with peginterferon and ribavirin in null responder genotype 1 or 4 chronic hepatitis C patients with compensated cirrhosis.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the World Medical Association (WMA) Declaration of Helsinki, adopted by the 18th WMA General Assembly, Helsinki, Finland, June 1964, and subsequent amendments. All patients were informed verbally and in writing regarding the objectives, procedures and risks of study participation. The patients signed the informed consent form (ICF) that contained information about the objectives of the study, about the procedures followed during the study and about the risks and restrictions of the study, with special reference to possible side effects of the medication and potential interactions. The primary investigator (PI) was responsible for the care of the patients throughout the study. If the PI was not present in the clinical site, instructions were left for the staff and a telephone number where the PI could be reached.

Adults (18-64 years)	43
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants were screened for participation in this study within 56 days before dosing. If Screening was conducted between Day -56 and Day -35, inclusive, rescreen assessments had to be completed before dosing on Day 1. Eligible patients arrived at the study unit on Day -1 for safety assessments.

Period 1

Period 1 title	Treatment Period
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

This was an open-label study.

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1: Treatment-naïve

Arm description:

All participants received peginterferon alfa-2a (PEG-IFN) 180 micrograms (µg) subcutaneously once weekly for 24 weeks and weight-based ribavirin (RBV) 1000-1200 milligrams per day (mg/day) in two divided doses orally for 24 weeks along with DNV/r 100/100 mg twice a day (BID) orally for 24 weeks.

Arm type	Active comparator
Investigational medicinal product name	Danoprevir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

All participants received DNV 100 mg BID, every 12 hours (q12h) administered orally for 24 weeks.

Investigational medicinal product name	Ritonavir
Investigational medicinal product code	
Other name	Norvir®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

All participants received ritonavir 100 mg BID orally for 24 weeks.

Investigational medicinal product name	PEG-IFN alfa 2a
Investigational medicinal product code	
Other name	Pegasys®
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

All participants received PEG-IFN 180 µg subcutaneously once weekly.

Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	Copegus®, RBV
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

All participants received weight-based RBV 1000-1200 mg/day in two divided doses orally for 24 weeks.

Arm title	Cohort 2: Previous null responders
------------------	------------------------------------

Arm description:

All participants received PEG-IFN 180 µg subcutaneously once weekly and weight-based RBV 1000-1200 mg/day in two divided doses orally for 24 weeks along with RO5024048 1000 mg BID co-administered orally. Participants also received DNV/r 100/100 mg BID for 24 weeks.

Arm type	Experimental
Investigational medicinal product name	Danoprevir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

All participants received DNV/r 100/100 mg BID q12h administered orally for 24 weeks.

Investigational medicinal product name	Ritonavir
Investigational medicinal product code	
Other name	Norvir®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

All participants received ritonavir 100 mg BID orally for 24 weeks.

Investigational medicinal product name	RO5024048
Investigational medicinal product code	
Other name	Mericitabine
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

All participants received RO5024048 1000 mg BID 24 weeks.

Investigational medicinal product name	PEG-IFN alfa 2a
Investigational medicinal product code	
Other name	Pegasys®
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

All participants received PEG-IFN 180 µg subcutaneously once weekly.

Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	Copegus®, RBV
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

All participants received weight-based RBV 1000-1200 mg/day in two divided doses orally for 24 weeks.

Primary: Area Under the Curve (AUC) for DNV and Ritonavir

End point title	Area Under the Curve (AUC) for DNV and Ritonavir ^[4]
-----------------	---

End point description:

AUC is the area under the curve (mathematically known as integral) in a plot of concentration of drug in blood plasma against time. Typically, the area is computed starting at the time the drug is administered and ending when the concentration in plasma is negligible. Here the drug concentration is measured at certain discrete points in time and the trapezoidal rule is used to estimate AUC. Blood samples for DNV and ritonavir were collected at the following times: Days 1 and 14 (serial PK): Predose (within 60 min), 0.5, 1, 2, 3, 4, 6, 8, 12, and 24 hours post morning dose. AUC 0-12 denotes Area Under the Concentration Curve from 0 to 12 hours and AUC tau is the AUC from 0 hours to the time of next dosing measured as hours times nanograms per milliliter (hr*ng/mL)

Day 14

Notes:

[11] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As a Phase II study, there was no hypothesis testing, but descriptive statistical analyses were performed according to the protocol.

End point values	Cohort 1: Treatment-naïve	Cohort 2: Previous null responders		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	21	20		
Units: L/hr				
arithmetic mean (standard deviation)				
DNV (n=21,20)	215 (± 202)	223 (± 202)		
Ritonavir (n= 21,16)	12.1 (± 5.28)	13.6 (± 5.21)		

Statistical analyses

No statistical analyses for this end point

Primary: Terminal Elimination Half Life (t_{1/2})for DNV and Ritonavir

End point title	Terminal Elimination Half Life (t _{1/2})for DNV and Ritonavir ^[12]
-----------------	---

End point description:

t_{1/2} is the time required for the concentration of the drug to reach half of its original value. Blood samples were collected at the following times: Days 1 and 14 (serial PK): Pre-dose (within 60 minutes), 0.5, 1, 2, 3, 4, 6, 8, 12, and 24 hours (Day 2 and Day 15, respectively) post morning dose.

End point type	Primary
----------------	---------

End point timeframe:

Days 1 and 14

Notes:

[12] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As a Phase II study, there was no hypothesis testing, but descriptive statistical analyses were performed according to the protocol.

End point values	Cohort 1: Treatment-naïve	Cohort 2: Previous null responders		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	22	20		
Units: hours				
arithmetic mean (standard deviation)				
DNV Day 1 (n=22,20)	2.05 (± 0.572)	2.01 (± 0.858)		
DNV Day 14 (n=21,20)	1.83 (± 0.746)	1.57 (± 0.328)		
Ritonavir Day 1(n=19,12)	5.17 (± 2.05)	5.7 (± 2.04)		
Ritonavir Day 14 (n=20,15)	4.51 (± 1.01)	5.28 (± 1.48)		

Statistical analyses

No statistical analyses for this end point

Primary: t1/2 for RO4995855 and RO5012433

End point title | t1/2 for RO4995855 and RO5012433^[13]^[14]

End point description:

t1/2 is the time required for the concentration of the drug to reach half of its original value. Blood samples were collected at the following times: Days 1 and 14 (serial PK): Pre-dose (within 60 minutes), 0.5, 1, 2, 3, 4, 6, 8, 12, and 24 hours (Day 2 and Day 15, respectively) post morning dose.

End point type | Primary

End point timeframe:

Days 1 and 14

Notes:

[13] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As a Phase II study, there was no hypothesis testing, but descriptive statistical analyses were performed according to the protocol.

[14] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: RO5024048 was not administered to Cohort 1 participants. Therefore, calculating AUC of RO4995855 and RO5012433 (metabolites of RO5024048) was not feasible in these participants.

End point values	Cohort 2: Previous null responders			
Subject group type	Reporting group			
Number of subjects analysed	20			
Units: hours				
arithmetic mean (standard deviation)				
RO4995855 Day 1 (n=18)	4.14 (± 0.52)			
RO4995855 Day 14 (n=20)	4.52 (± 1.34)			
RO5012433 Day 1 (n=9)	8.74 (± 3.48)			
RO5012433 Day 14 (n=13)	11.2 (± 3.31)			

Statistical analyses

No statistical analyses for this end point

Primary: Accumulation Ratio (AR) for DNV and Ritonavir

End point title | Accumulation Ratio (AR) for DNV and Ritonavir^[15]

End point description:

Accumulation ratio was calculated as the ratio of AUC(0-tau, Day 14)/AUC(0-12h, Day 1). Blood samples were collected at the following times: Days 1 and 14 (serial PK): Pre-dose (within 60 minutes), 0.5, 1, 2, 3, 4, 6, 8, 12, and 24 hours (Day 2 and Day 15, respectively) post morning dose.

End point type | Primary

End point timeframe:

Day 14

Notes:

[15] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As a Phase II study, there was no hypothesis testing, but descriptive statistical analyses were performed according to the protocol.

End point values	Cohort 1: Treatment-naïve	Cohort 2: Previous null responders		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	22	20		
Units: ratio				
arithmetic mean (standard deviation)				
DNV	0.91 (± 0.4)	0.84 (± 0.38)		
Ritonavir	2.47 (± 0.94)	2.25 (± 0.59)		

Statistical analyses

No statistical analyses for this end point

Primary: AR for RO4995855 and RO5012433

End point title	AR for RO4995855 and RO5012433 ^{[16][17]}
-----------------	--

End point description:

AR was calculated as the ratio of AUC(0-tau, Day 14)/AUC(0-12h, Day 1). Blood samples were collected at the following times: Days 1 and 14 (serial PK): Pre-dose (within 60 minutes), 0.5, 1, 2, 3, 4, 6, 8, 12, and 24 hours (Day 2 and Day 15, respectively) post morning dose.

End point type	Primary
----------------	---------

End point timeframe:

Day 14

Notes:

[16] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As a Phase II study, there was no hypothesis testing, but descriptive statistical analyses were performed according to the protocol.

[17] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: RO5024048 was not administered to Cohort 1 participants. Therefore, calculating AUC of RO4995855 and RO5012433 (metabolites of RO5024048) was not feasible in these participants.

Secondary: Changes From Baseline in Hepatitis C Virus Ribonucleic Acid (HCV RNA) Levels

End point title	Changes From Baseline in Hepatitis C Virus Ribonucleic Acid (HCV RNA) Levels
-----------------	--

End point description:

HCV RNA antiviral activity was summarized by cohort in the Efficacy Population. Efficacy Population comprised all patients who received at least one dose of study medication, and for whom at least one post-baseline efficacy measurement was performed. Summary statistics for changes from baseline HCV RNA levels throughout the study were provided. Before calculating the change from baseline in HCV RNA levels, the levels were log transformed (base 10) measured as International Units per milliliter (IU/mL). If at a particular visit the HCV RNA level was unquantifiable or undetectable, the level was imputed as 24.99 before being log transformed.

End point type	Secondary
----------------	-----------

End point timeframe:

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 February 2012	This amendment included changes in Sponsor's name and address, sample size, sample collection times and data summarizing methods. Study committee and data monitoring committee were included. Study drug references were corrected to accurately reflect the information in clinical study protocol. The collection and reporting time for unrelated SAEs following the last dose of study treatment was updated. Patient safety data on ongoing studies was updated.
01 October 2012	This amendment included changes according to which pregnancy and drug testing did not need to be performed on Day 13 or Day 14. Text was added to clarify that sites should use their own Electrocardiogram (ECG) readout/printouts. The electronic Case Report Form (eCRF) was updated. Serial and Trough Pharmacokinetic (PK) sampling times were amended. SAE and pregnancy reporting timeframe was changed.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
