

Clinical trial results:

Open-Label, Multi-Center, Phase 2 Study of Anti-CCR4 Monoclonal Antibody KW 0761 (mogamulizumab) in Subjects with Previously Treated Peripheral T-cell Lymphoma (PTCL)

Summary

EudraCT number	2011-004151-39
Trial protocol	GB DE ES DK NL
Global end of trial date	22 July 2015

Results information

Result version number	v1 (current)
This version publication date	13 August 2016
First version publication date	13 August 2016

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 December 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	22 July 2015
Global end of trial reached?	Yes
Global end of trial date	22 July 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the overall response rate of KW-0761 for the treatment of subjects with relapsed or refractory PTCL

Protection of trial subjects:

The study was conducted in accordance with the principles of the Declaration of Helsinki, the International Conference on Harmonization (ICH) consolidated guideline E6 - Good Clinical Practice (GCP) and any applicable national and local laws and regulations. Subjects were provided with written and oral information about the study (aims, methods, anticipated benefits, potential hazards and insurance arrangements). No procedures were conducted until informed consent was provided. The protocol included wording for the treatment of skin rash and hypersensitivity-like reactions (wording regarding premedication prior to KW-0761 infusion was also included in the protocol).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 June 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	United Kingdom: 8
Country: Number of subjects enrolled	Denmark: 2
Country: Number of subjects enrolled	France: 15
Country: Number of subjects enrolled	Italy: 4
Worldwide total number of subjects	38
EEA total number of subjects	38

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	23
From 65 to 84 years	14
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

Recruitment opened in May 2012 and closed in October 2013.

Pre-assignment

Screening details:

All subjects were screened for eligibility to participate in the trial. Subjects that met all inclusion/exclusion criteria as per protocol, were eligible for entry into the study. A total of 59 subjects were screened of which 21 failed the screening process. 38 patients were therefore enrolled into the study.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Mogamulizumab (KW-0761)
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Mogamulizumab (KW-0761)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

1.0mg/kg over at least 1 hr on Days 1, 8, 15 and 22 of the first cycle and Days 1 and 15 of each subsequent 28-day cycle.

Number of subjects in period 1	Mogamulizumab (KW-0761)
Started	38
Completed	35
Not completed	3
Adverse event, non-fatal	1
Patient discretion	2

Baseline characteristics

Reporting groups

Reporting group title	Overall study
-----------------------	---------------

Reporting group description: -

Reporting group values	Overall study	Total	
Number of subjects	38	38	
Age categorical			
Units: Subjects			
In utero	0	0	
Preterm newborn infants (gestational age < 37 wks)	0	0	
Newborns (0-27 days)	0	0	
Infants and toddlers (28 days-23 months)	0	0	
Children (2-11 years)	0	0	
Adolescents (12-17 years)	0	0	
Adults (18-64 years)	23	23	
From 65-84 years	15	15	
85 years and over	0	0	
Age continuous			
Units: years

End points

End points reporting groups

Reporting group title	Mogamulizumab (KW-0761)
Reporting group description: -	

Primary: Number of patients achieving overall response

End point title	Number of patients achieving overall response ^[1]
End point description:	

End point type	Primary
----------------	---------

End point timeframe:

Disease response was assessed every 8 weeks.

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive analysis was utilised for this primary endpoint.

End point values	Mogamulizumab (KW-0761)			
Subject group type	Reporting group			
Number of subjects analysed	35			
Units: Participants	4			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of patient achieving progression free survival

End point title	Number of patient achieving progression free survival
End point description:	

End point type	Secondary
----------------	-----------

End point timeframe:

Disease response was assessed every 8 weeks.

End point values	Mogamulizumab (KW-0761)			
Subject group type	Reporting group			
Number of subjects analysed	35			
Units: participants	35			

Statistical analyses

No statistical analyses for this end point

Secondary: Duration of Response (days)

End point title	Duration of Response (days)
-----------------	-----------------------------

End point description:

Four subjects had response durations of >1, 43, 77, >539 study days.

End point type	Secondary
----------------	-----------

End point timeframe:

Duration of response was measured from the time measurement criteria were met for CR/PR (whichever was first recorded) until the first date that PD or death was objectively documented.

End point values	Mogamulizuma b (KW-0761)			
Subject group type	Reporting group			
Number of subjects analysed	35			
Units: Days	0			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From pre-treatment visit until 90 days after the last dose.

Assessment type	Systematic

subjects affected / exposed	2 / 38 (5.26%)		
occurrences (all)	2		
Sepsis			
subjects affected / exposed	2 / 38 (5.26%)		
occurrences (all)	2		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 March 2012	<ul style="list-style-type: none">• Added only CCR4-positive subjects and the most common PTCL subtypes who expressed the CCR4 target excluding those with indolent disease and/or lower CCR4 expression;• Excluded subjects with a history of moderate or severe psoriasis or with psoriasis associated with systemic symptoms or with a 1st degree relative with history of psoriasis that required medical intervention;• Allowed subjects with known bone marrow involvement to participate if their platelet count was $\geq 75,000$ and allowed for laboratory retesting if the criteria for hematologic, hepatic, and renal function were not met;• Specified that safety surveillance would be performed on a regular basis by the Sponsor and independent therapeutic experts and extended the safety monitoring period from 30 to 90 days after the last dose of study medication;• The subject was required to use contraception for 3 months after the last dose of study drug;• Provided guidelines for documenting and treating a treatment-emergent skin rash;• Incorporated the mSWAT for subjects with skin disease with the IWG response criteria (definitions added) for assessment of global response;• Included the assessment of AEs from the time of informed consent rather than after the first dose of study drug;• Allowed subjects to continue monthly treatment with mogamulizumab, at the discretion of the investigator, beyond CR;• Updated the guidelines for the treatment of hypersensitivity-like reactions;• Allowed skin biopsies for CCR4 expression in subjects with skin disease.
16 April 2013	<ul style="list-style-type: none">• To modify the Inclusion/Exclusion Criteria;• To increase the number of sites;• To specify the permissible dosing interval for mogamulizumab;• To allow subjects with PD in one disease compartment to continue treatment for a period of up to 8 weeks and allow additional time for the demonstration of an objective response;• To allow subjects who experienced a CR to continue to be treated for a period of 12 months or until progression, whichever occurred first;• To clarify the guidance for the treatment of hypersensitivity-like reactions;• To remove clinical laboratory assessments (i.e., CD4 and CD8 cell counts) not necessary for the conduct of this study.• To lengthen the Screening period;• To clarify the acceptable age of archived lymph node or skin biopsy sample (i.e., collected within 3 months Pretreatment) and to allocate a portion of the sample collected to test a second method of CCR4 analysis in order to establish compatibility between the tests;• To clarify that the SWAT must be performed for all subjects;• To clarify that certain body weight changes requires dose adjustment and to describe the storage conditions of the reconstituted drug product;• To specify that in this study, disease progression and lymphopenia should not be considered adverse events.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
