

**Clinical trial results:**

A Phase III, randomised, double-blind, placebo-controlled, parallel group study to determine the effect of 12 weeks treatment of orally inhaled tiotropium + olodaterol fixed dose combination (2.5/5 µg, 5/5 µg) delivered by the Respimat® Inhaler, on exercise endurance time during constant work rate cycle ergometry in patients with Chronic Obstructive Pulmonary Disease (COPD) (TorractoTM)

Due to a system error, the data reported in v1 is not correct and has been removed from public view.

Analysis stage	Final
Date of interim/final analysis	06 November 2013
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 September 2013
Global end of trial reached?	Yes
Global end of trial date	26 September 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to compare the effects of orally inhaled tiotropium + olodaterol fixed dose combination (2.5/5 µg; 5/5 µg) with placebo on exercise tolerance after 12 weeks of treatment in patients with COPD. Exercise tolerance will be assessed by measurement of symptom-limited endurance time during constant work rate cycle ergometry at 75% Wcap (Maximal Work Capacity).

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct. Rescue medication was allowed for all patients as required.

An individual patient could be withdrawn from the clinical trial prior to completion if any of the following criteria apply:

1. The patient was no longer able to participate for medical reasons (e.g. pregnancy, surgery, adverse events, or other diseases).
2. Administrative reasons (protocol violations, persistent non-compliance).
3. Decision by Boehringer Ingelheim to discontinue a specific patient (e.g. in case of SAEs)

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 March 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 50
Country: Number of subjects enrolled	United Kingdom: 73
Country: Number of subjects enrolled	Finland: 24
Country: Number of subjects enrolled	France: 22
Country: Number of subjects enrolled	Germany: 76
Country: Number of subjects enrolled	Hungary: 76
Country: Number of subjects enrolled	Italy: 43
Country: Number of subjects enrolled	Argentina: 31

Country: Number of subjects enrolled	Canada: 56
Country: Number of subjects enrolled	United States: 93
Worldwide total number of subjects	544
EEA total number of subjects	364

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	313
From 65 to 84 years	231
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

All subjects were screened for eligibility to participate in the trial. Subjects attended specialist sites which would then ensure that they (the subjects) met all strictly implemented inclusion/exclusion criteria. Subjects were not randomised to trial treatment if any one of the specific entry criteria were violated.

Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Once daily 2 puffs, solution for inhalation RespiMat placebo to tiotropium+olodaterol during the 12-week treatment period: comparator

Arm type	Placebo
Investigational medicinal product name	placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

Matching placebo

During the 12-week treatment period, patients were to inhale 2 actuations from the RESPIMAT Inhaler, once a day, in the morning.

Arm title	Tio+Olo 2.5 / 5.0 µg
------------------	----------------------

Arm description:

Oral inhalation of fixed dose combination (FDC) of Tiotropium (Tio) 2.5 µg and Olodaterol (Olo) 5 µg (Tiotropium: 1.25 µg per actuation and Olodaterol: 2.5 µg per actuation), 2 puffs from the RESPIMAT inhaler, once daily, in the morning during the 12-week treatment period.

Arm type	Experimental
Investigational medicinal product name	Tiotropium/Olodaterol FDC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

2.5 µg tiotropium / 5 µg olodaterol (1.25 µg + 2.5 µg per actuation, respectively)

During the 12-week treatment period, patients were to inhale 2 actuations from the RESPIMAT Inhaler, once a day, in the morning.

Arm title	Tio+Olo 5.0 / 5.0 µg
------------------	----------------------

Arm description:

Oral inhalation of FDC of Tiotropium (Tio) 5 µg and Olodaterol (Olo) 5 µg (Tiotropium and Olodaterol:

2.5 µg per actuation), 2 puffs from the RESPIMAT inhaler, once daily, in the morning during the 12-week treatment period.

Arm type	Experimental
Investigational medicinal product name	Tiotropium/Olodaterol FDC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

5 µg tiotropium / 5 µg olodaterol (2.5 µg each per actuation)

During the 12-week treatment period, patients were to inhale 2 actuations from the RESPIMAT Inhaler, once a day, in the morning.

Number of subjects in period 1^[1]	Placebo	Tio+Olo 2.5 / 5.0 µg	Tio+Olo 5.0 / 5.0 µg
Started	132	133	139
Completed	118	126	133
Not completed	14	7	6
Adverse event, serious fatal	-	2	-
Consent withdrawn by subject	1	-	-
Adverse event, non-fatal	11	5	5
Not defined above	1	-	1
Lost to follow-up	1	-	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline characteristics are based on patients who were randomised after successfully completing the screening period and received at least one dose of the trial medication.

Primary: Adjusted mean endurance time (sec) during constant work rate cycle ergometry (CWRCE) after 12 weeks

End point title	Adjusted mean endurance time (sec) during constant work rate cycle ergometry (CWRCE) after 12 weeks
End point description: Primary endpoint was endurance time during constant work rate cycle ergometry to symptom limitation at 75% of maximal work capacity after 12 weeks of treatment. The endurance time in seconds was transformed using log10 scale to correct skewness in endurance time on original scale and then the MMRM model was fitted to the log10-transformed data and the least square means and SEs were obtained. To present the results in a way easier for interpretation, the least square mean from the MMRM fitted to the log10-transformed data were transformed back taking 10 to the power of the least square estimate for the log10 of geometric mean and the corresponding SE was transformed using delta method to get the corresponding SEs of the geometric mean. Full analysis set (FAS). FAS is defined as all patients that were randomised, received treatment and had baseline and at least one post-baseline measurement before or at Week 12 for the primary endpoint.

Notes:

[30] - ANCOVA model for log10 (endurance time [s]) with categorical effects of treatment and (log10-transformed) baseline as continuous covariate.

Secondary: Adjusted mean endurance time (sec) during constant work rate cycle ergometry (CWRCE) after 6 weeks treatment

End point title	Adjusted mean endurance time (sec) during constant work rate cycle ergometry (CWRCE) after 6 weeks treatment
-----------------	--

End point description:

Secondary endpoint was endurance time during constant work rate cycle ergometry to symptom limitation at 75% of maximal work capacity after 6 weeks of treatment. The endurance time in seconds was transformed using log10 scale to correct skewness in endurance time on original scale and then the MMRM model was fitted to the log10-transformed data and the least square means and SEs were obtained. To present the results in a way easier for interpretation, the least square mean from the MMRM fitted to the log10-transformed data were transformed back taking 10 to the power of the least square estimate for the log10 of geometric mean and the corresponding SE was transformed using delta method to get the corresponding SEs of the geometric mean.

Full analysis set (FAS). FAS is defined as all patients that were randomised, received treatment and had baseline and at least one post-baseline measurement before or at Week 12 for the primary endpoint.

End point type	Secondary

Secondary: Adjusted mean slope of the intensity of breathing discomfort on Day 1

End point title	Adjusted mean slope of the intensity of breathing discomfort on Day 1
-----------------	---

End point description:

Secondary endpoint was the slope of the intensity of breathing discomfort during constant work rate cycle ergometry to symptom limitation at 75% of maximal work capacity after 1 day of treatment. The intensity of breathing discomfort was rated on the Borg Scale with categories from 0 (nothing at all) to 10 (maximal). The slope of the intensity of breathing discomfort was defined as the Borg scale value of breathing discomfort at the end of exercise minus the Borg scale value of breathing discomfort at pre-exercise divided by the endurance time. A decrease in slope indicates slowing down in decline in breathing, i.e., favorable results.

The V4 set included all patients in the TS who had evaluable measurements of endurance time at Baseline (Visit 3) and at Visit 4 (Day 1) during CWRCE. Patients were assigned to the Visit 4 set after implementation of data handling rules that set measurements to missing.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

142 days

Adverse event reporting additional description:

All adverse events, occurring during the course of the clinical trial (i.e. from signing the informed consent onwards throughout the 12 week treatment period and the 21-day follow up period) were to be collected, documented, and reported to the sponsor on the appropriate electronic case report form / serious adverse event reporting forms.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 March 2012	Additional guidance was provided for premature withdrawal, if the patient forgot to take study medication within the specified time window, regarding concomitant medications, and regarding the rescheduling of visits. As a recommendation of local authorities to restrict the trial population to Gold Stage II and III, the inclusion criteria were restricted to patients with a post-bronchodilator 30% \leq FEV1 <80% of predicted normal. A clarification was added that patients had to remain clinically stable for 3 weeks prior to the randomisation visit. For safety reasons, patients with chronic respiratory failure were excluded from the trial. Individual withdrawal criteria were defined. In alignment with the statistical section the list of 'other endpoints' was changed to refer to 'secondary endpoints'. A specification that SAEs needed to be reported until 21 days after the last administration of study medication was added and a list of 'always serious' AEs was included to comply with a new BI internal procedure. For consistency with the recovery phase after cycle ergometry, the IC-maneuver was included in the recovery phase after shuttle walking at sites using the Oxycon Mobile. The procedure of measuring IC was clarified. Administrative changes, minor corrections and further clarifications were introduced.
22 October 2012	The procedure for clinical evaluation of drug-induced liver injury was specified to implement a new BI guideline to comply with the FDA guidance for industry 'Drug-Induced Liver Injury: Premarketing Clinical Evaluation'. As part of the reporting procedure of drug-induced liver injury, protocol-specific significant events were introduced. The period during which a pregnancy test after end of treatment was to be performed was specified. It was specified that mortality adjudication and SAE adjudication was to be performed separately and that vital signs were to be taken prior to each PFT. Clarifications regarding the use of PDE4-inhibitors and on medication restrictions prior to exercise testing were added. The definition of moderate COPD exacerbations was corrected. A clarification was added that more detailed information on exercise testing, equipment and calibration requirements was available in a Manual of Procedures. Administrative changes, minor corrections and further clarifications were introduced.
25 June 2013	The description and categorisation of secondary and other endpoints was changed for the following reasons: Since this was a parallel-group trial, isotime was based on only one treatment. This change resulted in treatment comparisons at isotime to be based on different time points. Therefore, endpoints defined at isotime were regarded as less precise and important for treatment comparisons than planned in the original protocol and were relegated to other endpoints. In addition, slope of the intensity of breathing discomfort was used as a measure of the improvement of breathing discomfort during exercise and was added as one of the secondary efficacy endpoints. To be consistent with other exercise trials in the 1237.P1 project, the list of secondary efficacy endpoints was shortened.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
