

Clinical trial results:

Lot-to-Lot Consistency Study of DTaP-IPV-Hep B-PRP-T Vaccine Administered at 2 4 6 Months of Age in Healthy Latin American Infants Concomitantly with Prevenar™ and Rotarix™

Summary

EudraCT number	2011-004449-42
Trial protocol	Outside EU/EEA
Global end of trial date	28 September 2011

Results information

Result version number	v1 (current)
This version publication date	10 February 2016
First version publication date	12 September 2014

Trial information

Trial identification

Sponsor protocol code	A3L24

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001201-PIP01-11
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 April 2012
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 September 2011
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

- To demonstrate the equivalence of immunogenicity on 3 lots of DTaP-IPV-Hep B-PRP-T vaccine (final bulk product [FBP]) one month after a three-dose primary series (2, 4 and 6 months) when co-administered with Prevenar™ and Rotarix™, in terms of immunoresponses evaluated by:
 - Geometric Means of Titers (GMTs) for Hep B.
 - Seroprotection rates for D, T, Hep B, PRP, and polio and seroresponse rates for anti-PT and anti-FHA.
- To demonstrate the non-inferiority of the hexavalent DTaP-IPV-Hep B-PRP-T vaccine to the licensed hexavalent Infanrix hexa™ vaccine in terms of seroprotection or seroresponse rates to all antigens, one month after a three-dose primary series when co-administered with Prevenar™ and Rotarix™.

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were randomized and vaccinated in the study. Vaccinations were performed by qualified and trained study personnel. Subjects with allergy to any of the vaccine components were not vaccinated. After vaccination, subjects were also kept under clinical observation for 30 minutes to ensure their safety. Appropriate medical equipment were also available on site in case of any immediate allergic reactions.

Background therapy:

All subjects participating in the study were to have received Hep B and BCG vaccines between birth and 1 month of life in agreement with the national immunization calendar.

Evidence for comparator:

Infanrix hexa was chosen as the comparator vaccine as it is currently the licensed hexavalent vaccine in Colombia and Costa Rica.

Actual start date of recruitment	03 August 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Costa Rica: 442
Country: Number of subjects enrolled	Colombia: 933
Worldwide total number of subjects	1375
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	1375
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Study subjects were enrolled from 03 August 2010 to 23 November 2010 in 2 clinical centers in Columbia and 1 clinical center in Costa Rica.

Pre-assignment

Screening details:

A total of 1375 subjects who met all inclusion criteria and none of the exclusion criteria were enrolled and vaccinated.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Blinding implementation details:

The investigator (blind observer or assessor) and subject's parents or guardians did not know the vaccine administered. The assessor was in charge of the assessment of safety held in a separate room and away from where the vaccines were prepared. A nurse/vaccinator was in charge of the preparation and administration of the vaccine(s) in another room away from the assessor. When necessary the scratch off emergency decoding procedure described in the study protocol were to be followed.

Arms

Are arms mutually exclusive?	Yes
Arm title	DTaP-IPV-Hep B-PRP~T Batch A

Arm description:

Subjects received a 3-dose primary series of vaccinations with Batch A of diphtheria (D), tetanus (T), pertussis (2-component acellular), recombinant hepatitis B (Hep B) Hansenula polymorpha and poliomyelitis vaccine (IPV) adsorbed, and Haemophilus influenzae type b (Hib) vaccine [polyribosyl ribitol phosphate (PRP) conjugated to tetanus protein (DTaP-IPV-Hep B-PRP~T), with one dose each at 2, 4, and 6 months of age. Prevenar™ was co-administered with study vaccine at 2, 4, and 6 months of age, and Rotarix™ was co-administered at 2 and 4 months of age.

Arm type	Experimental
Investigational medicinal product name	Hexaxim
Investigational medicinal product code	DTaP-IPV-HepB-PRP-T vaccine
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular, one dose each at 2, 4, and 6 months of age

Arm title	DTaP-IPV-Hep B-PRP~T Batch B
------------------	------------------------------

Arm description:

Subjects received a 3-dose primary series of vaccinations with Batch B of diphtheria (D), tetanus (T), pertussis (2-component acellular), recombinant hepatitis B (Hep B) Hansenula polymorpha and poliomyelitis vaccine adsorbed, and Haemophilus influenzae type b (Hib) vaccine [polyribosyl ribitol phosphate (PRP) conjugated to tetanus protein (DTaP-IPV-Hep B-PRP~T), with one dose each at 2, 4, and 6 months of age. Prevenar™ was co-administered with study vaccine at 2, 4, and 6 months of age, and Rotarix™ was co-administered at 2 and 4 months of age.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Hexaxim
Investigational medicinal product code	DTaP-IPV-HepB-PRP-T vaccine
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use
Dosage and administration details:	
0.5 mL, intramuscular. One dose each at 2, 4, and 6 months of age.	
Arm title	DTaP-IPV-Hep B-PRP~T Batch C

Arm description:

Subjects received a 3-dose primary series of vaccinations with Batch C of diphtheria (D), tetanus (T), pertussis (2-component acellular), recombinant hepatitis B (Hep B) Hansenula polymorpha and poliomyelitis vaccine adsorbed, and Haemophilus influenzae type b (Hib) vaccine [polyribosyl ribitol phosphate (PRP) conjugated to tetanus protein (DTaP-IPV-Hep B-PRP~T), with one dose each at 2, 4, and 6 months of age. Prevenar™ was co-administered with study vaccine at 2, 4, and 6 months of age, and Rotarix™ was co-administered at 2 and 4 months of age.

Arm type	Experimental
Investigational medicinal product name	Hexaxim
Investigational medicinal product code	DTaP-IPV-HepB-PRP-T vaccine
Other name	
Pharmaceutical forms	Suspension for injection, Suspension for injection, Suspension for injection
Routes of administration	Intramuscular use, Intramuscular use, Intramuscular use
Dosage and administration details:	
0.5 mL, intramuscular. One dose each at 2, 4, and 6 months of age.	
Arm title	Infanrix Hexa

Arm description:

Subjects received a 3-dose primary series of vaccinations with the licensed Infanrix hexa™, with one dose each at 2, 4, and 6 months of age. Prevenar™ was co-administered with study vaccine at 2, 4, and 6 months of age, and Rotarix™ was co-administered at 2 and 4 months of age.

Arm type	Active comparator
Investigational medicinal product name	Infanrix hexa™
Investigational medicinal product code	DTaP-HBV-IPV + Hib vaccine
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular. One dose each at 2, 4, and 6 months of age.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events data were collected from Day 0 after Dose 1 through up to 6 months after the last dose.

Adverse event reporting additional description:

A participant randomized to Batch B got the Batch A vaccine, safety analyses was according to the actual vaccine administered. Total number reported for each solicited event reflects those with available data for the indicated event.

Assessment type	Non-systematic

Reporting groups

Reporting group title	DTaP-IPV-Hep B-PRP~T Batch A
-----------------------	------------------------------

Reporting group description:

Subjects received a 3-dose primary series of vaccinations with Batch A of diphtheria (D), tetanus (T), pertussis (2-component acellular), recombinant hepatitis B (Hep B) Hansenula polymorpha and poliomyelitis vaccine (IPV) adsorbed, and Haemophilus influenzae type b (Hib) vaccine [polyribosyl ribitol phosphate (PRP) conjugated to tetanus protein (DTaP-IPV-Hep B-PRP~T), with one dose each at 2, 4, and 6 months of age. Prevenar™ was co-administered with study vaccine at 2, 4, and 6 months of age, and Rotarix™ was co-administered at 2 and 4 months of age.

Reporting group title	DTaP-IPV-Hep B-PRP~T Batch B
-----------------------	------------------------------

Reporting group description:

Subjects received a 3-dose primary series of vaccinations with Batch B of diphtheria (D), tetanus (T), pertussis (2-component acellular), recombinant hepatitis B (Hep B) Hansenula polymorpha and poliomyelitis vaccine adsorbed, and Haemophilus influenzae type b (Hib) vaccine [polyribosyl ribitol phosphate (PRP) conjugated to tetanus protein (DTaP-IPV-Hep B-PRP~T), with one dose each at 2, 4, and 6 months of age. Prevenar™ was co-administered with study vaccine at 2, 4, and 6 months of age, and Rotarix™ was co-administered at 2 and 4 months of age.

Reporting group title	DTaP-IPV-Hep B-PRP~T Batch C
-----------------------	------------------------------

Reporting group description:

Subjects received a 3-dose primary series of vaccinations with Batch C of diphtheria (D), tetanus (T), pertussis (2-component acellular), recombinant hepatitis B (Hep B) Hansenula polymorpha and poliomyelitis vaccine adsorbed, and Haemophilus influenzae type b (Hib) vaccine [polyribosyl ribitol phosphate (PRP) conjugated to tetanus protein (DTaP-IPV-Hep B-PRP~T), with one dose each at 2, 4, and 6 months of age. Prevenar™ was co-administered with study vaccine at 2, 4, and 6 months of age, and Rotarix™ was co-administered at 2 and 4 months of age.

Reporting group title	Infanrix Hexa
-----------------------	---------------

Reporting group description:

Subjects received a 3-dose primary series of vaccinations with the licensed Infanrix hexa™, with one dose each at 2, 4, and 6 months of age. Prevenar™ was co-administered with study vaccine at 2, 4, and 6 months of age, and Rotarix™ was co-administered at 2 and 4 months of age.

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[4] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[5] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[6] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[7] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[8] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[9] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 October 2009	Protocol was updated with a requirement to collect additional data on the intake of antipyretics (category 1 medication) to perform an observational analysis on the potential impact of antipyretics prophylaxis on the immunogenicity of DTaP-IPV-Hep B-PRP-T.
09 March 2010	A modification in the planned interim analysis for the study.
02 August 2010	A change in the design from a double-blind to an observer blinded study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
